Survey on Research Data at the University of Klagenfurt

Karoline Feyertag
Florian Müller
University of Klagenfurt

Citation: Feyertag, Karoline; Müller, Florian (2025): Survey on Research Data at the University of Klagenfurt. Version 1.0. DOI: 10.11587/KZLB3V

Abstract: The survey, which was specially designed for the University of Klagenfurt, had two main objectives: (1) to survey the handling of research data by researchers and doctoral students at the University of Klagenfurt (types of use and independent production of research data), i.e. personal research data management (RDM). (2) the development of RDM support structures at the University of Klagenfurt on the basis of this needs analysis (e.g. with the participation of the University of Klagenfurt in national repositories such as AUSSDA and the evaluation of an in-house research data repository). With this survey, the University of Klagenfurt also implemented part of the 'Open Science & Data Management' plan in line with the university's overall development plan (GUEP 2025-30, system objective 5, p. 35). The results of the survey should form the basis for the development and implementation of the University of Klagenfurt's open science policy, which should also contain a binding research data governance guideline.

I. I. Scientific classification 9
Field of Science 9
Employment status 10
II. Collection/generation of research data 10
FD1: What types of research data do you work with (measurement data, test data, interview transcripts, texts, audiovisual content, social media, etc.)? 10
FD2: What digital formats does your research data have? 11
FD3: Which percentage of the scientific literature you consult do you use in digital form (e.g. as a PDF)? 12
FD4a: Which file formats do you use when you generate and store digital research data? 12
FD4b: Which file formats do you use when you generate and store digital research data? 13
FD5: How often do you collect sensitive or confidential research data (e.g. biometric or other personal data)? 13
FD6: Please estimate the total size of your research data in relation to the required storage space (estimated average value per year). 14
III. Data management plan 15
FD17: Have you ever had to create a data management plan for a research project? 15
FD17a: Which funding organisation requested the DMP? 15
FD18: Did you encounter any difficulties when completing the data management plan? 16
IV. Data management in research practice 17
FD7: If you store research data, where do you store it? 17
FD8: Do you protect your research data with a password? 18
FD9: Do you use data protection provisions in your research (e.g. anonymisation to protect personal data)? 18

FD10: Is your research data subject to the FAIR principles? 19

FD11: How do you currently share your data within the research team in the context of a research project? 21

V. Data publication 22

FD12: For which target group do you make your research data accessible (taking into account the GDPR and discipline-specific ethical standards)? 22

FD13: How can third parties access your research data? 24

FD14: Have you encountered situations in which you had to disclose research data (e.g. for publications or in the course of third-party funded projects)? 27

FD15: Have you already published in a journal that requires disclosure of your methods and data in the course of preregistration? 27

FD16: How likely do you think it is that you will carry out a preregistration for a scientific contribution (e.g. journal article) in the future? 28

VI. Reuse of your own data 29

FD19: Do you determine in advance for your research data whether and, if so, how this specifically prepared data may be further used and processed? 29

FD20: Do you share your research data with third parties for reuse? 29

FD21: What might discourage you from sharing your research data with third parties? 30

VII. Reuse of third-party research data 32

FD22: How often do you use third-party research data for your research? 32

FD23: Are you interested in making greater use of secondary analyses based on published research data for your research in the future? 32

FD24: Do you use third-party research data in your teaching? 33

FD25: In the future, are you interested in conducting secondary analyses using published research data for your teaching? 34

FD 26: If you are using existing third-party research data, how do you obtain it? 34

VIII. Closing questions on infrastructure and services 39

FD27: Which research data archive would you prefer to use, assuming that there are no costs for you and your organisation? 39

FD28: Are you interested in a workshop at the University of Klagenfurt on research data management issues (repositories, data protection, DMPs, etc.)? 39

FD29: What other support services for handling research data would you be interested in at the University of Klagenfurt? 41

FD30: Do you have any further comments or suggestions on the subject of research data? 44

Report on the Survey on "Research Data at the University of Klagenfurt"

Survey period: 14/03/2024-11/04/2024
Survey target group: All researchers at the University of Klagenfurt (academic staff, doctoral students)
Survey sample: 1,674 people
Survey participation: approx. 10%

1 Introduction

The documentation of the so-called life cycle of research data, starting with the planning of a research project through data collection and processing to the storage, archiving and publication of the data, is becoming increasingly important. Research data is generated in all areas of scientific work. Structured data management allows for a more economical use of resources as well as an easier sharing and re-use of research results and can lead to greater visibility as a researcher. The aim of structured research data management (RDM) is to provide free access to scientific research data.

This survey, which was specially designed for the University of Klagenfurt, had two main objectives:

1. to survey the handling of research data by researchers and doctoral students at the University of Klagenfurt (types of use and independent production of research data), i.e. personal research data management (RDM).
2. the development of RDM support structures at the University of Klagenfurt on the basis of this needs analysis (e.g. with the participation of the University of Klagenfurt in national repositories such as AUSSDA and the evaluation of an in-house research data repository).

The survey structure was based on the research data life cycle. The survey asked which research data is produced and used and in what form. It also investigated where and how researchers store and make accessible (or not) the research data they generate, and to what extent third-party research data is already (re-)used for their own research. Finally, with this survey, the University of Klagenfurt also implemented part of the 'Open Science & Data Management' plan in line with the university's overall development plan (GUEP 2025-30, system objective 5, p. 35). The results of the survey should form the basis for the development and implementation of the University of Klagenfurt's open science policy, which should also contain binding guidelines for research data management.

2 Method

The invitation to participate in the survey 'Research data at the University of Klagenfurt' was sent via email by the Vice-Rectorate for Research under VR Martina Merz to all academic staff and doctoral students at the University of Klagenfurt. The email contained links to two distinct surveys, one of which offered non-participants the opportunity to provide reasons for non-participation.

Both surveys were anonymous and were technically implemented using the LimeSurvey software licensed by the University of Klagenfurt. Answering the questions was voluntary and the data was stored anonymously and only analysed in aggregated form.

The survey 'Reasons for non-participation in the survey' contained two questions. Of the 74 questionnaires opened, 37 were completed in full. None of the questions were mandatory.

The questionnaire for the 'Research data at the University of Klagenfurt' survey comprised 34 questions. The survey was conducted over four weeks from 14 March to 11 April 2024. 121 of the 188 questionnaires opened were completed in full. None of the answers were mandatory. The number of responses for each question is listed in the following.

The survey had a total of four open questions, while the remaining questions had predefined and selectable answer options (multiple responses were possible in some cases). The survey design was also structured in such a way that further sub-questions were only displayed if previous questions had been answered accordingly. In the results analysis, the number of answers was taken into account for each question and reported separately.

3 Executive Summary

Based on the results of the survey, a number of tangible next steps were identified. These steps will be implemented in consultation with all of the university's stakeholders wherever possible, and in line with external guidelines, framework conditions and legal requirements.

3.1. Regular information events on RDM

Starting in the summer term 2025, regular information events on research data management will be held via the university's continuing education system. These will include information on the life cycle of research data, FAIR and CARE principles, an overview of (certified) research data repositories, rights and licensing of research data as well as information on secure storage locations at the university, data security and data protection. Pertaining to data protection in research, hands-on workshops on writing consent forms for the processing of personal data can also be offered. Similarly, practical workshops can be held on completing data management plans in accordance with the requirements of the various research funding organisations (FWF, FFG, HEU).[1] In addition to the range of general information events for all persons involved in research, teaching and/or studies, and depending on staff and time resources, the University plans to provide formats tailored to specific target groups, for instance doctoral students (in cooperation with the Doc.Service).

[1] Austrian Science Fund (FWF), Austrian Research Promotion Agency (FFG), Horizon Europe (HEU)

3.2. Joining AUSSDA

The University of Klagenfurt is due to join the social science data archive AUSSDA, a CoreTrustSeal certified repository, in 2025. Beyond the existing survey on research data, the necessary steps for this include a needs assessment conducted through dialogues with the deans and faculty representatives of all four faculties of the University of Klagenfurt (Faculty of Arts, Humanities and Education, Faculty of Social Sciences, Faculty of Technical Sciences, Faculty of Management, Economics and Law), the University Centres and any other stakeholders. This assessment will determine the service specifications, which the University of Klagenfurt must include in its cooperation agreement with AUSSDA. Accession to AUSSDA requires the Rectorate's approval contingent upon the draft resolution submitted by the Vice-Rector for Research and International Affairs, Jan Steinbrener. The cooperation agreement between the University of Klagenfurt, represented by Mr Steinbrener, and AUSSDA is then concluded and signed. The decision to admit the University of Klagenfurt as a full member of AUSSDA is expected to be made at the last meeting of the AUSSDA Steering Board in autumn 2025.

3.3. Technical support, storage, research data repository

The Research Support Service and the Central Computing Services (ZID) should collaborate to examine additional options for the secure storage, secure transfer and secure sharing of research data during a research project and optimise tools currently used for this purpose (Seafile, Moodle, university servers). The university's new digitalisation board, created in 2025, will play a key role in this process. This involves the consolidation, central administration and better utilisation of the available computing resources for the research activities of all faculties (e.g. reviewing the resources for high-performance computing). Furthermore, an analysis concept is to be formulated in accordance with the plan for large-scale research infrastructure (particularly regarding open science and research data management) as laid out in the university's current performance agreement (LV 2025-27, B2.2) and building on both the present survey and the research data management guideline that will be developed. This analysis concept will evaluate the need for an in-house research data repository. External requirements, such as from the Austrian Federal Ministry of Women, Science and Research (e.g. Open Science Policy Austria) and from the EU (e.g. the 2025-27 European Research Area National Action Plan on Open Science), will also be considered. Moreover, researchers from all faculties will be invited to share their needs according to the bottom-up approach of the concept analysis. Based on this evaluation, possible implementation measures will be explored (in-house solution or external providers). The implementation of the DAMAP tool is also to be realised in the period of the current performance agreement (2025-27). The DAMAP tool should make it much easier to complete the DMPs required by research funding organisations. Interfaces to internal databases such as the personnel database and the third-party funding database are required for this.

3.4. Data stewards as central contact persons at the faculties

According to the plan for large-scale research infrastructure (B.2.2) in the 2025-27 performance agreement, the Research Support Service is to expand its expertise in the field of research data management by obtaining the data steward certificate (e.g. at the University of Vienna) and by adjusting existing personnel resources accordingly. This is a first step towards anchoring data stewards at the university. A central contact person for RDM at the Research Support Service should offer advice and support for the structured research data management of all researchers at the University of Klagenfurt (e.g. DMPs for third-party funded projects, integration of research data into

the research documentation/CRIS). In a second step, the Rectorate should clarify the extent to which the implementation of data stewards at the individual faculties can be realised based on the available personnel resources.

3.5. Drafting an open science policy including a Research Data Management Guideline

According to the plan for large-scale research infrastructure (B.2.2) in the performance agreement 2025-27, the Research Support Service and the University Library will draft an open science policy for research data management at the University of Klagenfurt on the basis of this survey. In a first step, benchmarking will be carried out with a structured content analysis and comparison of all existing and selected international RDM guidelines in Austria. In a second step, a first draft for an in-house RDM guideline will be created on this basis. Thirdly, the feasibility and realisability of the draft guideline will be determined in personal consultations with as many stakeholders at the University of Klagenfurt as possible. The first draft is then revised based on the feedback received. This second version of the guideline will be sent to the stakeholders for a final review and then submitted to the Rectorate for approval. In addition to the researchers and faculties, the following central institutions and staff units in particular will be consulted: the University Library, the Research Support Service, the Legal Services Office, Central Computing Services (data protection, IT security), and the Quality Management Office. Among others, the RDM guideline should regulate the following points: definition of research data, scope of application, ownership of rights, data protection and ethics, responsibilities, contact points.

3.6. Literature references

The EOSC task force's recommendations to rectorates on data stewards:

- Basalti, C., Fazekas-Paragh, J., Forni, M., van Gelder, C., Hasani-Mavriqi, I., Janik, J., Kalová, T., Kuchma, I., Lindroos, H., Lütcke, H., Pinnick, J., Raga, N., Thorpe, D., & Wildgaard, L. (2024). *Recommendations for Data Stewardship Skills, Training and Curricula with Implementation Examples from European Countries and Universities*. Zenodo. https://doi.org/10.5281/zenodo.10573892

Survey by e-infrastructures Austria 2015, on which this questionnaire is based:

- Bauer, B., Ferus, A., Gorraiz, J., Gründhammer, V., Gumpenberger, C., Maly, N., Mühlegger, J. M., Preza, J. L., Sánchez Solís, B., Schmidt, N., & Steineder, C. (2015). *Forschende und ihre Daten. Ergebnisse einer österreichweiten Befragung – Report 2015*. Version 1.1. Zenodo. https://doi.org/10.5281/zenodo.32037

4 Results of the survey: 'Reason for non-participation in the survey'

The first survey on 'Reason for non-participation in the survey on research data at the University of Klagenfurt' was opened by a total of 79 people but completed by only 50% of those. The following two questions were asked and the following answer options were offered:

For which reasons are you not taking part in the survey on 'Research data at the University of Klagenfurt'?

- Lack of interest in the topic of research data.
- I do not work with research data.
- Research data generally plays no role in my field of research.
- Other

Please select the scientific disciplines to which you feel you primarily belong.

- Humanities
- Human Medicine, Health Sciences
- Natural Sciences
- Social Sciences
- Technical Sciences

When asked about the reason for non-participation, a majority of 31.51% stated that they do not work with research data. Other reasons given by 2.74% were 'Research data generally plays no role in my field of research' and by 1.37% 'Lack of interest in the topic of research data'. In the category 'Other', the comments can be summarised as follows:

- External lecturer
- I am at the beginning of my research/employment at the University of Klagenfurt
- Research data play no/only a minor role for me at the moment
- I am retired
- Rejection of centralised research data management
- Survey too long

The second question concerned self-assignment to an Austrian Field of Science. In order to ensure the complete anonymity of the participants, they were not assigned to the faculties and university centres of the University of Klagenfurt. This results in a relative vagueness of the subject classification, as people who are employed at the Faculty of Technical Sciences, for example, could also assign themselves to the natural sciences. As a percentage, 23.29% from the Humanities, 4.11% from the Natural Sciences, 19.18% from the Social Sciences and 12.33% from the Technical Sciences took part in this first survey.

5 Results of the survey: 'Research data at the University of Klagenfurt'

The main survey was opened by a total of 188 people; 121 data sets were completed in full (as of 22 April 2024). The total of 34 questions were divided into eight groups:

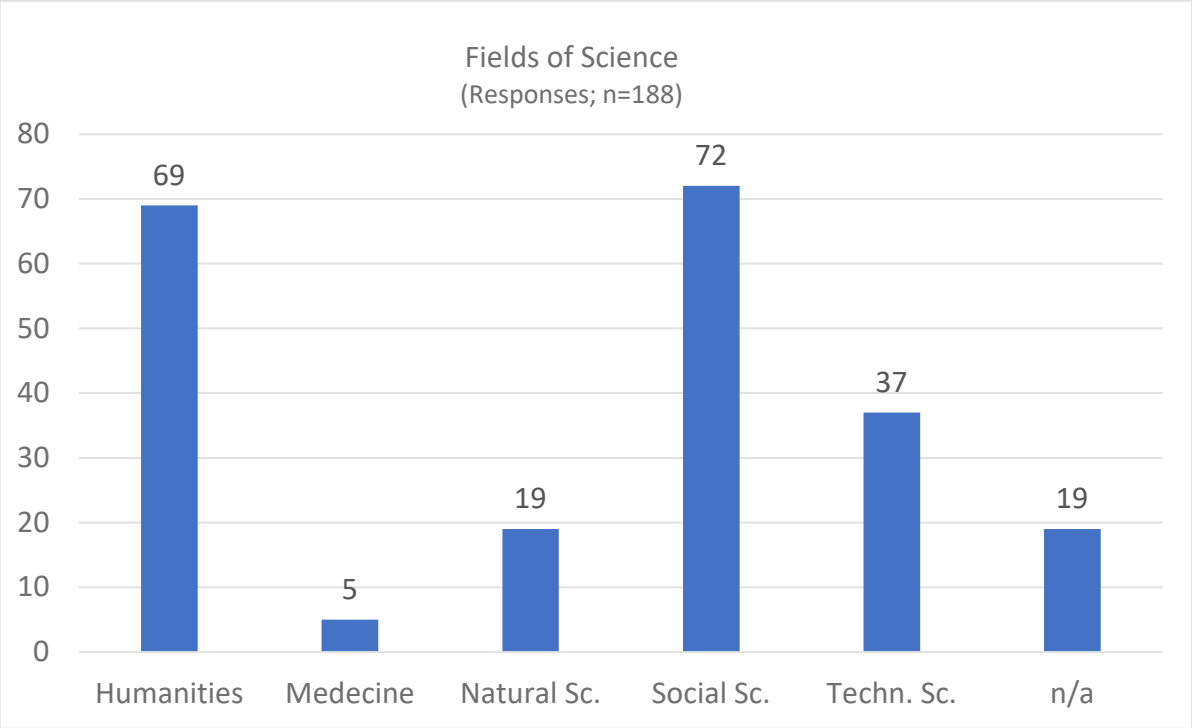
I. Scientific classification
II. Collecting/generation of research data
III. Data management plan
IV. Data management in research practice
V. Data publication
VI. Reuse of your own data
VII. Reuse of third-party research data
VIII. Closing questions on infrastructure and services

The entire set of questions can be found in the 'Questionnaire' supplement.

I. I. Scientific classification

Field of Science

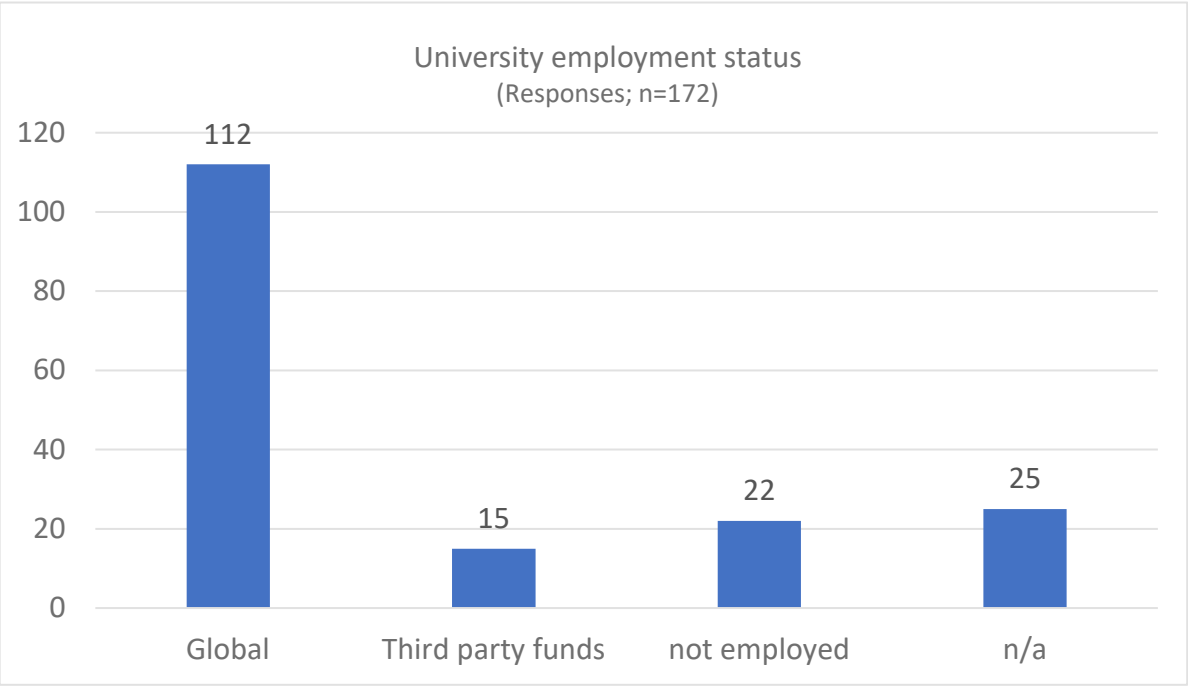
Please select the scientific disciplines to which you feel you primarily belong.



Employment status

Please assign yourself to a category:

- Researchers financed by the global budget
- Researchers financed by third-party funds
- Doctoral students not employed by the university
- n/a



II. Collection/generation of research data

FD1: What types of research data do you work with (measurement data, test data, interview transcripts, texts, audiovisual content, social media, etc.)?

Research data is digital or analogue data that is generated or processed in the course of scientific activity (e.g. through measurements, surveys, source work).

Please write your answer here:

The open text responses are summarised below, as there frequently were multiple responses.

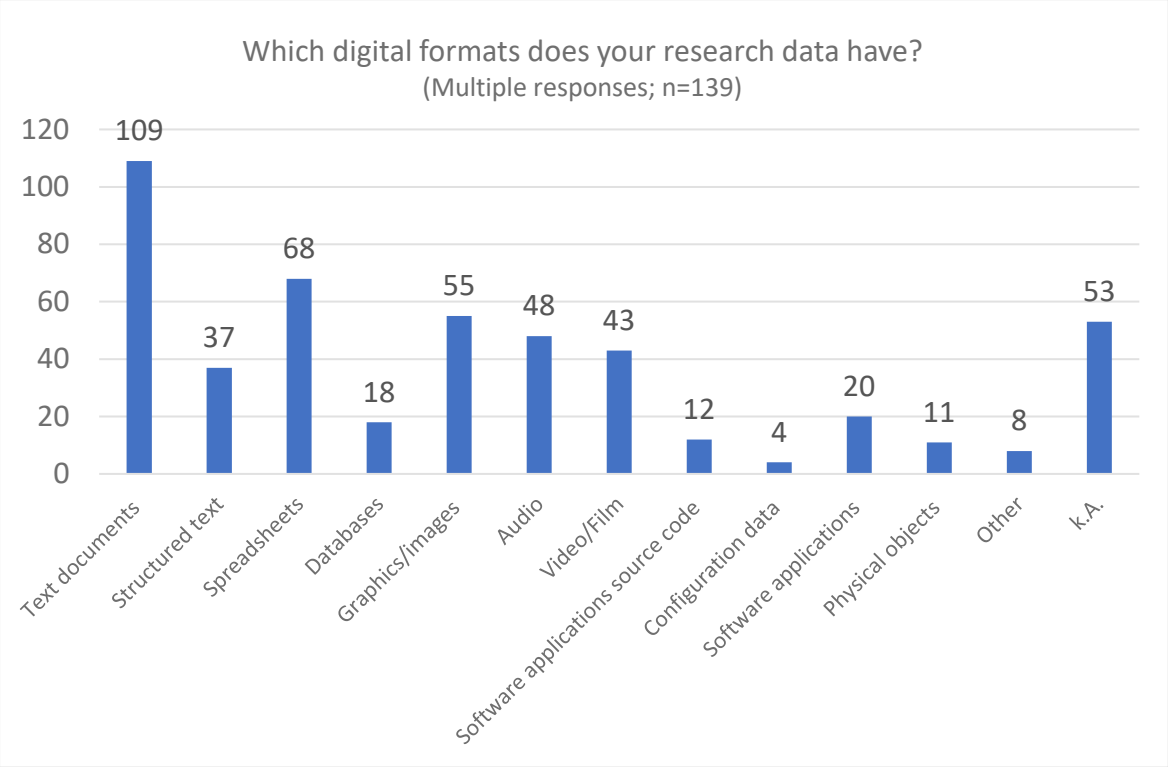
- Texts
- Measurement and test data
- Interview transcripts
- Video and image files
- Observation protocols
- Publicly accessible interaction data from social media and evaluation platforms
- GIS
- Simulated data
- Reference data sets
- Statistics
- Source code
- Digital objects
- Web content
- Data from Statistics Austria
- Digital trace data
- Synthetic data
- Opinion research
- Aggregated macro data from national and international statistical organisations
- Legislative texts
- Scientific articles

- Archive sources
- Bibliographies
- Graphics
- Log data
- Online questionnaires
- Optimisation of data processing techniques in intelligent systems/AI
- Online language corpora
- Drawings from interview partners
- Sensor data from machines and robots

FD2: What digital formats does your research data have?

Please select all that apply and also take into account that certain research data is available in several formats:

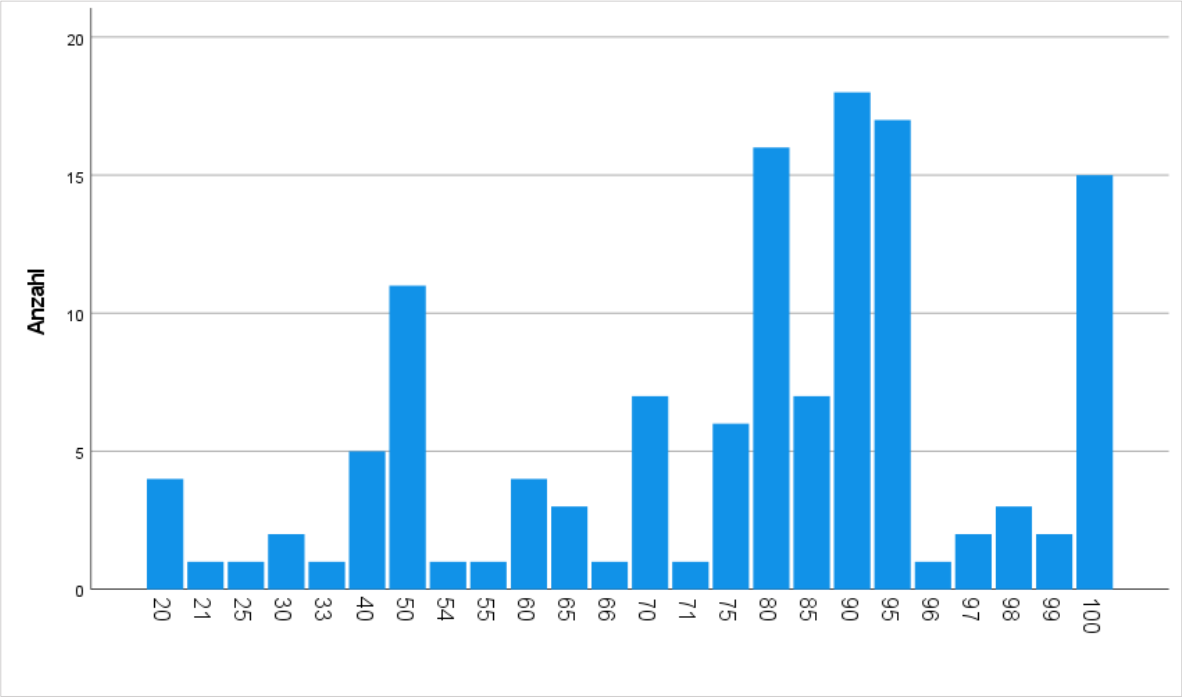
- Text documents (DOC, ODF, PDF, TXT, etc.)
- Structured text (HTML, JSON, TEX, XML etc.)
- Spreadsheets (XLS, ODS, CSV, SAS, Stata, SPSS etc.)
- Databases (MS Access, MySql, Oracle etc.)
- Graphics/images (JPEG, SVG, PNG, GIF, TIFF etc.)
- Audio (MP3, WAV, AIFF, OGG etc.)
- Video/Film (MPEG, AVI, WMV, MP4 etc.)
- Software applications source code (CSS, JavaScript, Java etc.)
- Configuration data (INI, CONF etc.)
- Software applications
- Physical objects (e.g. samples of any kind)
- Other digital formats



The following were listed in the free text field under 'Other digital formats':

- S-parameters, radio frequencies
- Attack graph models
- MaxQDA
- Print media

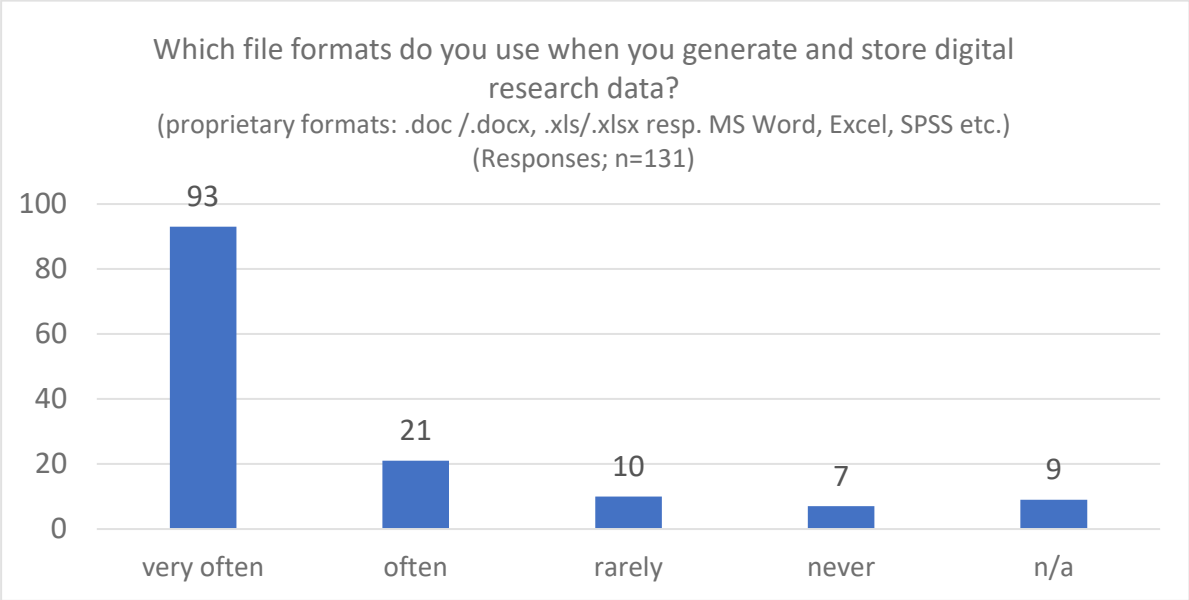
FD3: Which percentage of the scientific literature you consult do you use in digital form (e.g. as a PDF)?



FD4a: Which file formats do you use when you generate and store digital research data?

Please choose the appropriate response for each item:

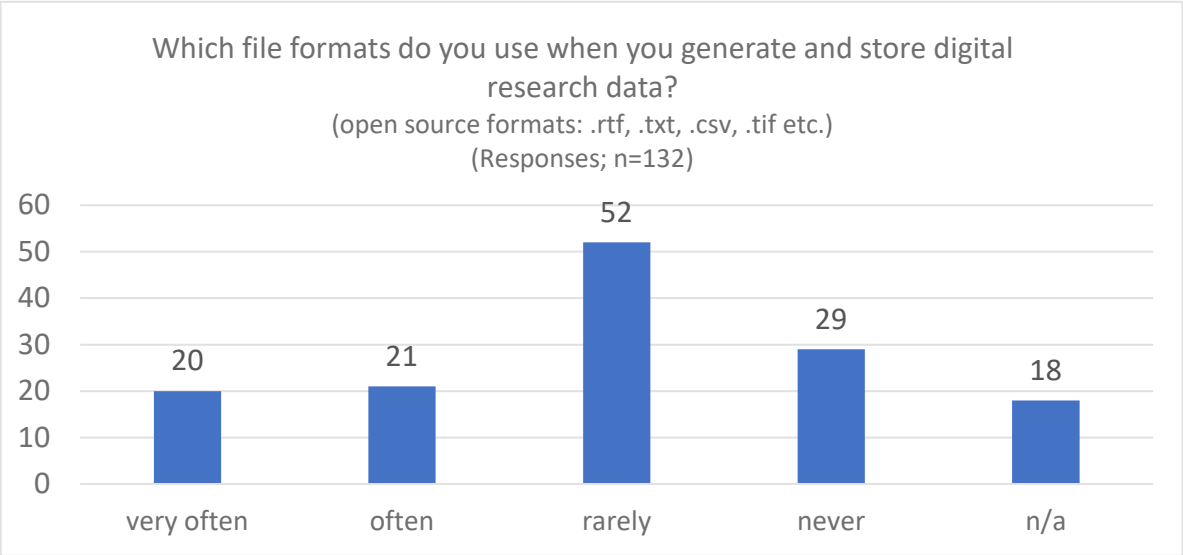
- **proprietary formats** (.doc /.docx, .xls/.xlsx resp. MS Word, Excel, SPSS etc.)
    - Very often
    - Often
    - Rarely
    - Never
    - n/a



FD4b: Which file formats do you use when you generate and store digital research data?

Please select the applicable option:

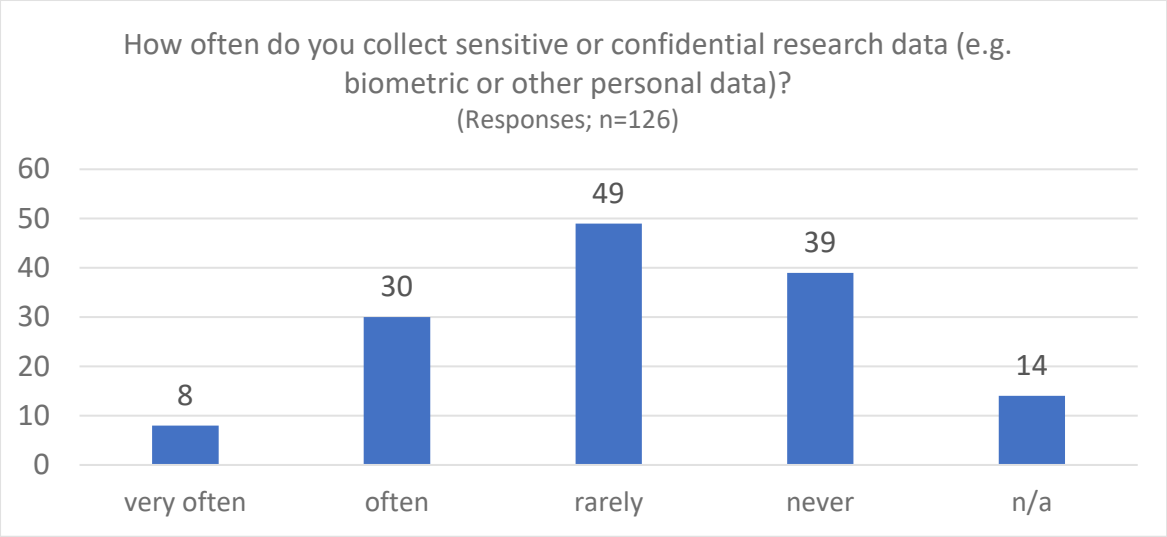
- **open source formats** (.rtf, .txt, .csv, .tif, .odt resp. LibreOffice etc.)
  - Very often
  - Often
  - Rarely
  - Never
  - n/a



FD5: How often do you collect sensitive or confidential research data (e.g. biometric or other personal data)?

Please select the applicable option:

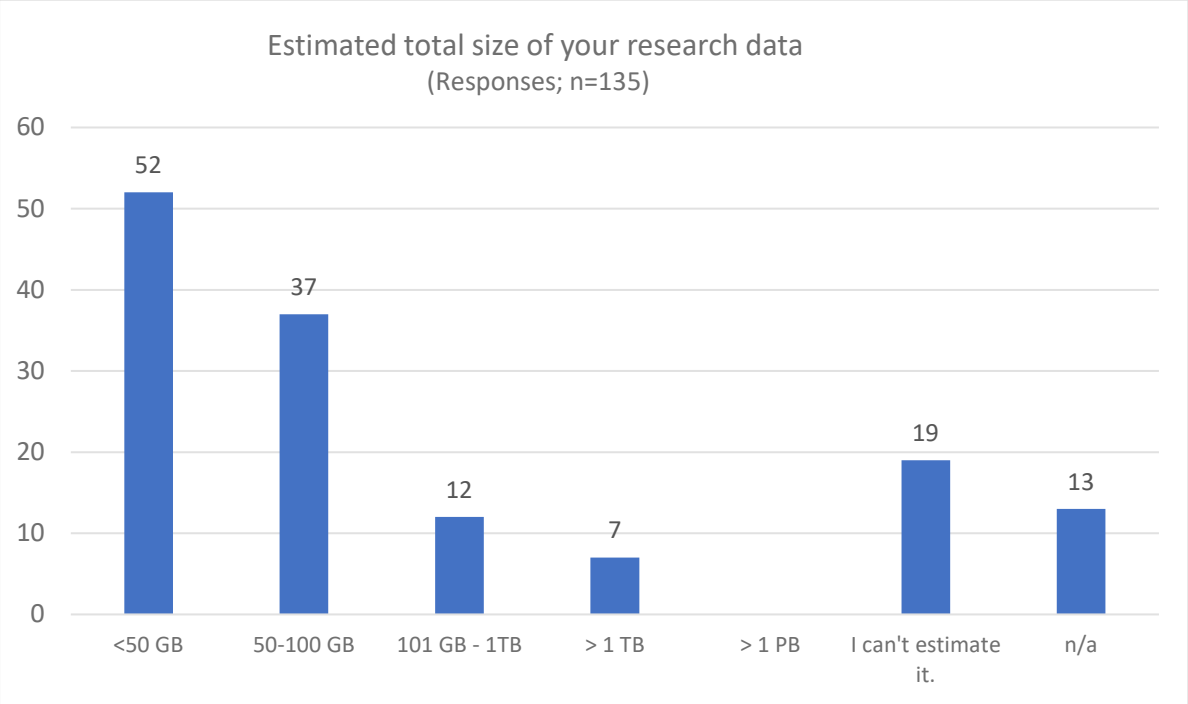
- Very often
- Often
- Rarely
- Never
- n/a



FD6: Please estimate the total size of your research data in relation to the required storage space (estimated average value per year).

Please choose only one of the following:

- Small (< 50 GB)
- Medium (50-100 GB)
- Large (101 GB - 1 TB)
- Very large (1 TB - 1 PB)
- Big (> 1 PB)
- I can't estimate it.



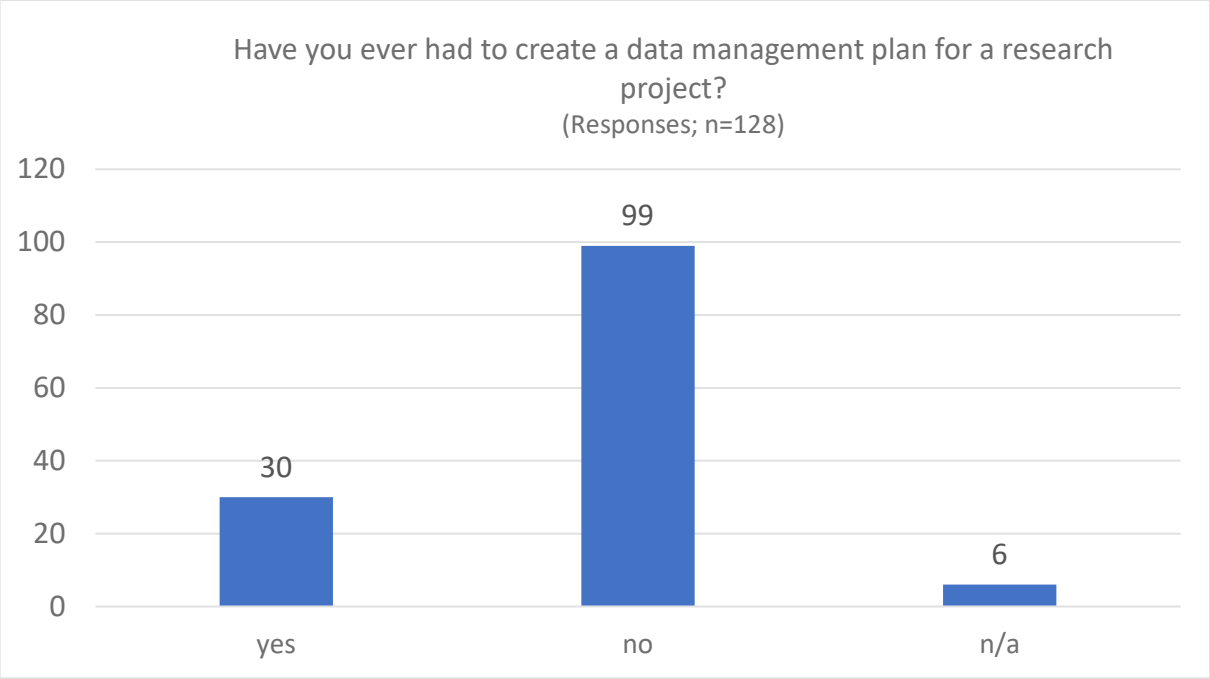
Comments on data size include general comments on the specified selection sizes, for example that a distinction should be made between which data quantities are actually used, which are aggregated or generated and which external data quantities ('data pool') are used for research. These quantities are variable and dynamic, and are generally on the increase.

III. Data management plan

FD17: Have you ever had to create a data management plan for a research project?

Please choose only one of the following answers:

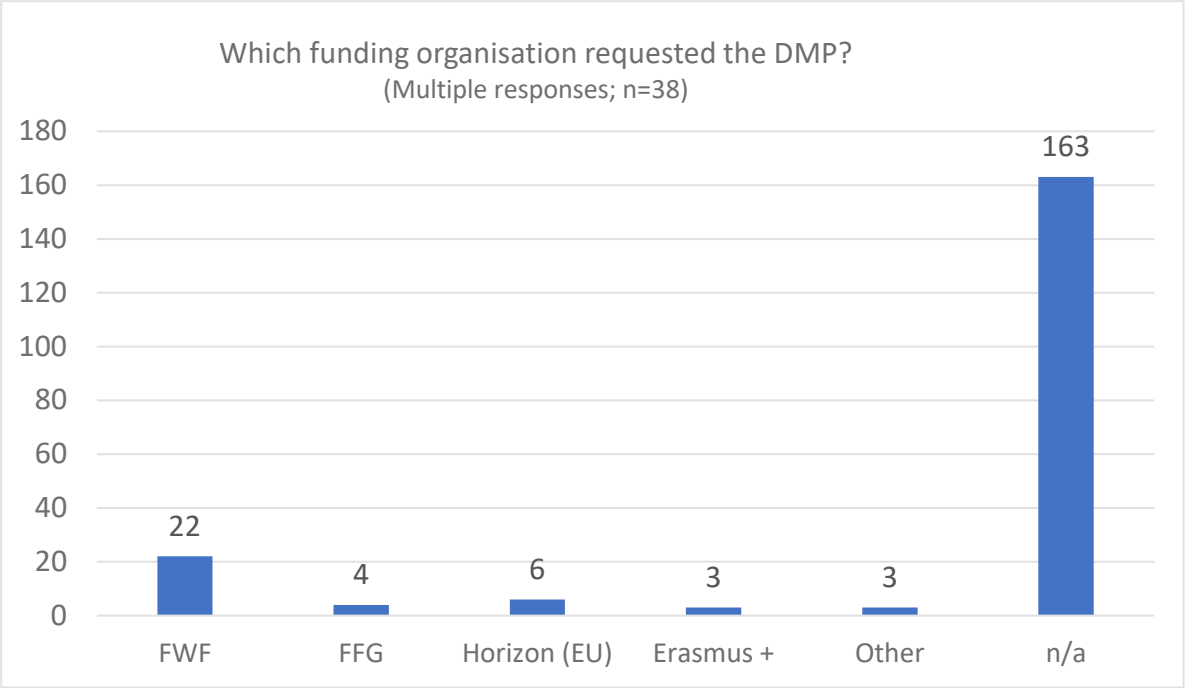
- Yes, as part of a research project.
- No
- n/a



FD17a: Which funding organisation requested the DMP?

Only answer this question if the following conditions are met:
Answer was 'Yes, as part of a research project.' at question '9 [FD17]'
Please choose all that apply:

- FWF
- FFG
- Horizon Europe
- Erasmus+
- Other



FD18: Did you encounter any difficulties when completing the data management plan?

If yes, please specify!

In the open text field on completing data management plans, it was repeatedly emphasised that clear guidelines are desired and that support from the Research Support Service is very helpful. In general, it became clear that data management plans, which were requested exclusively by funding institutions, were perceived as an additional, time-consuming workload. Another need that emerged from the comments was that the university should offer a better range of secure storage locations and data storage infrastructure that is compliant with data protection laws. It was said to be 'sometimes difficult to ensure' that the university's data storage infrastructure fulfils non-disclosure agreements (NDAs). A particular challenge highlighted was the standard use of natural science categories for projects in the social sciences and humanities.

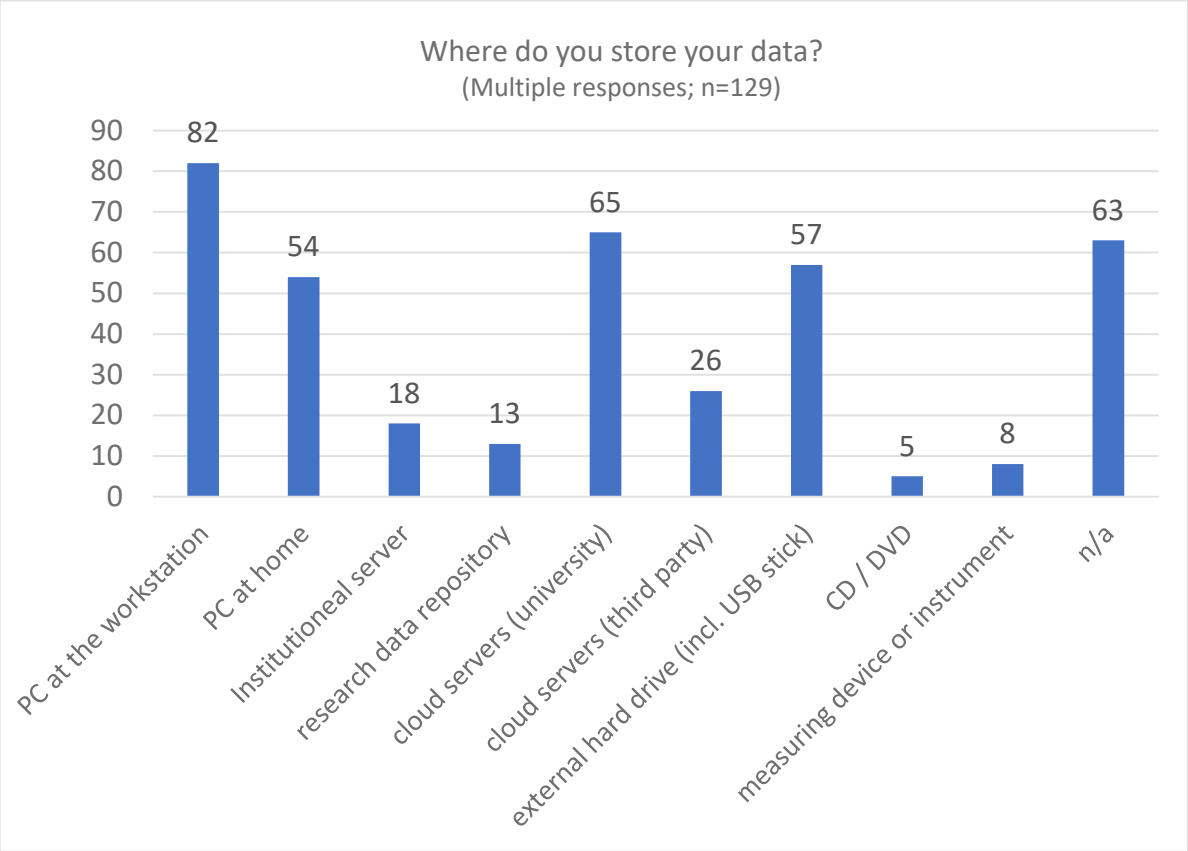
IV. Data management in research practice

FD7: If you store research data, where do you store it?

Multiple responses possible:

- on the hard disc of my workstation computer
- on the hard disc of my personal computer
- on an institutional server
- on a research data repository
- on cloud servers provided by the university
- on cloud services provided by third parties (e.g. Google)
- on an external hard drive (including USB stick)
- on CDs / DVDs
- directly on the measuring device or instrument
- Other

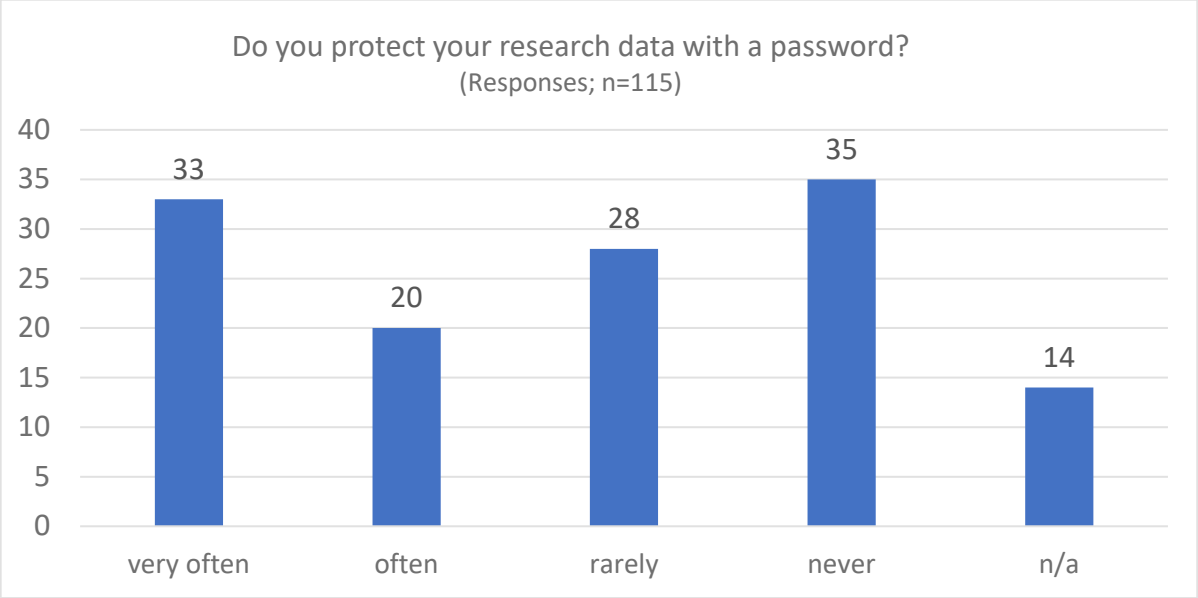
Private cloud servers, cloud servers of partner universities and Overleaf were mentioned among the 'other storage locations'. Graz University of Technology and the University of Vienna, for example, offer free Overleaf licences for employees and students.



FD8: Do you protect your research data with a password?

Please choose the appropriate response for each item:

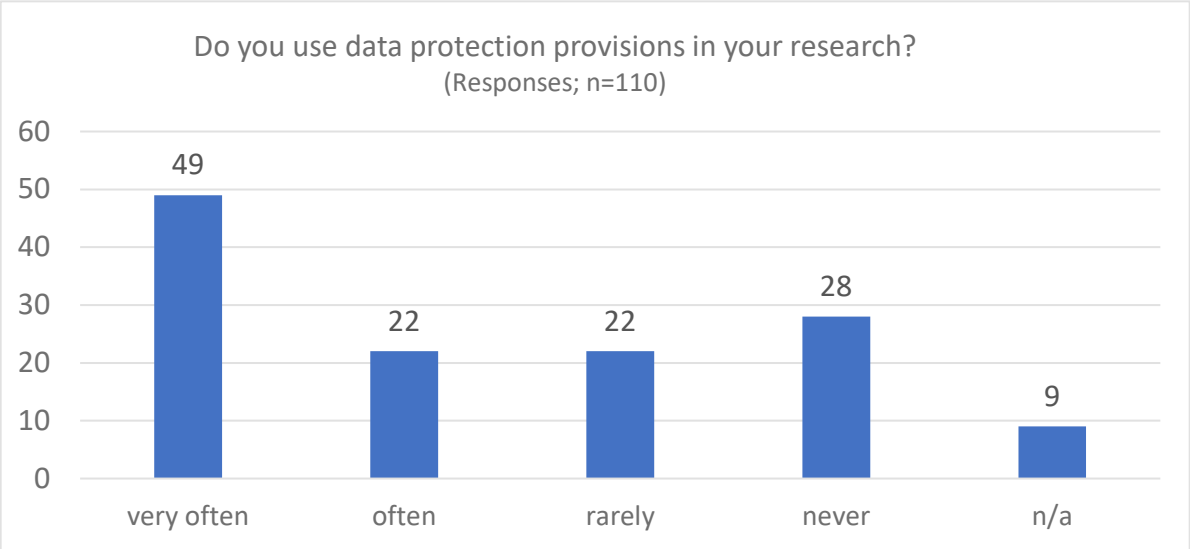
- Very often
- Often
- Rarely
- Never
- n/a



FD9: Do you use data protection provisions in your research (e.g. anonymisation to protect personal data)?

Please choose the appropriate response for each item:

- Very often
- Often
- Rarely
- Never
- n/a



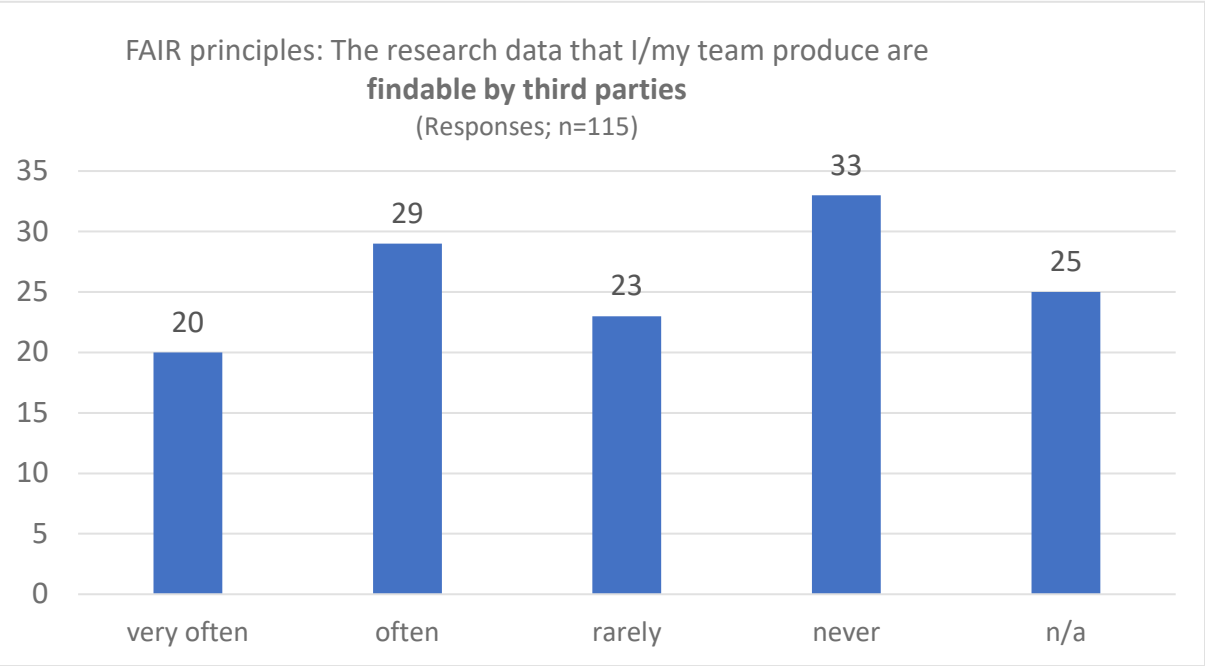
FD10: Is your research data subject to the FAIR principles?

*The FAIR principles state that research data should be **f**indable, **a**ccessible, **i**nteroperable (technically comparable) and **r**eusable by third parties. They form the basis for the reuse of data by third parties across disciplines and countries.*

Please choose the appropriate response for each item:

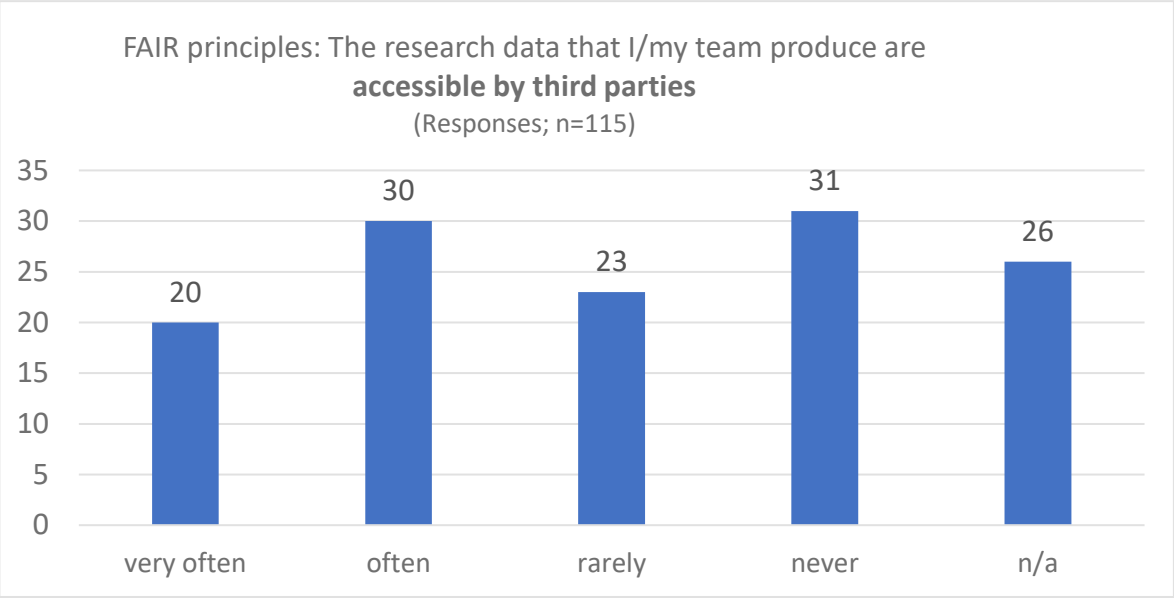
The research data that I/my team produce are …

- findable for third parties.



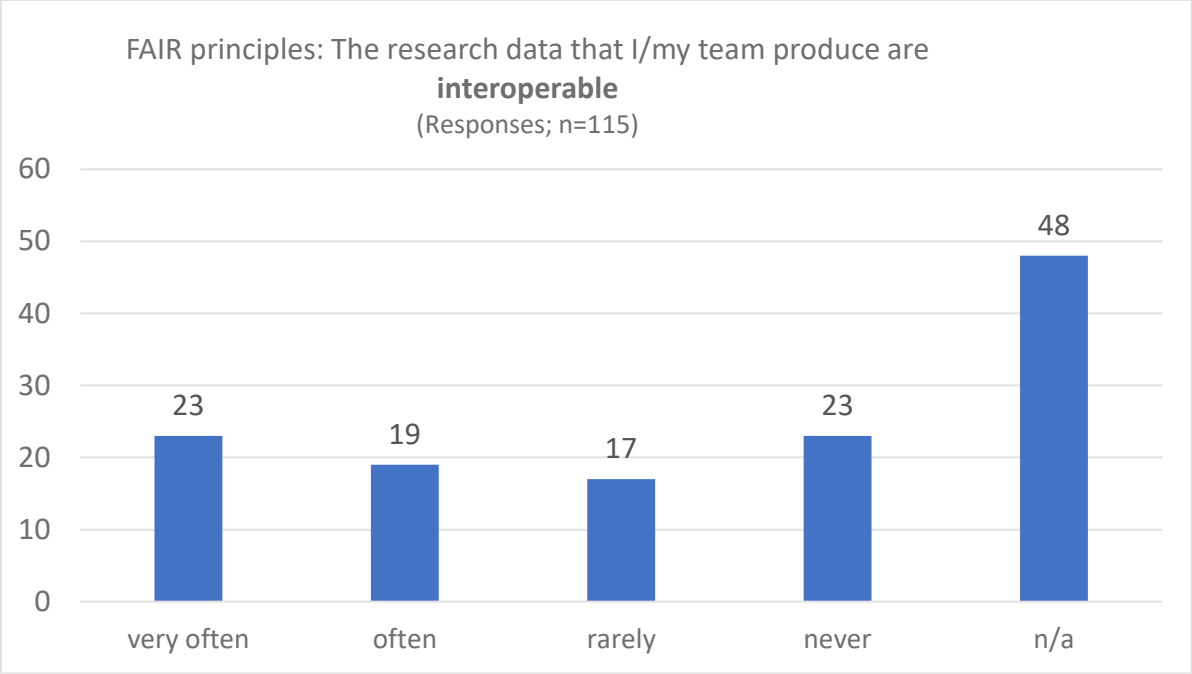
The research data that I/my team produce are …

- accessible to third parties



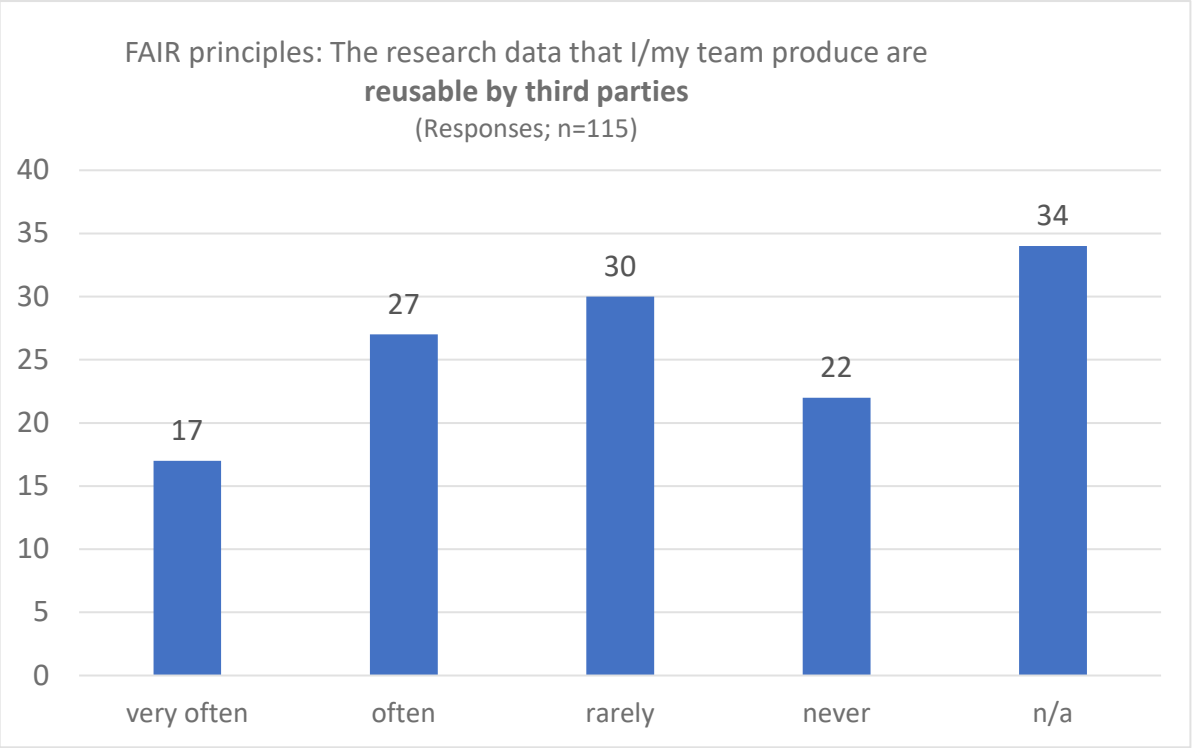
The research data that I/my team produce are …

- interoperable, i.e. we comply with common technical standards to make our data compatible in different systems (e.g. by using open file formats).



The research data that I/my team produce are …

- reusable by third parties.

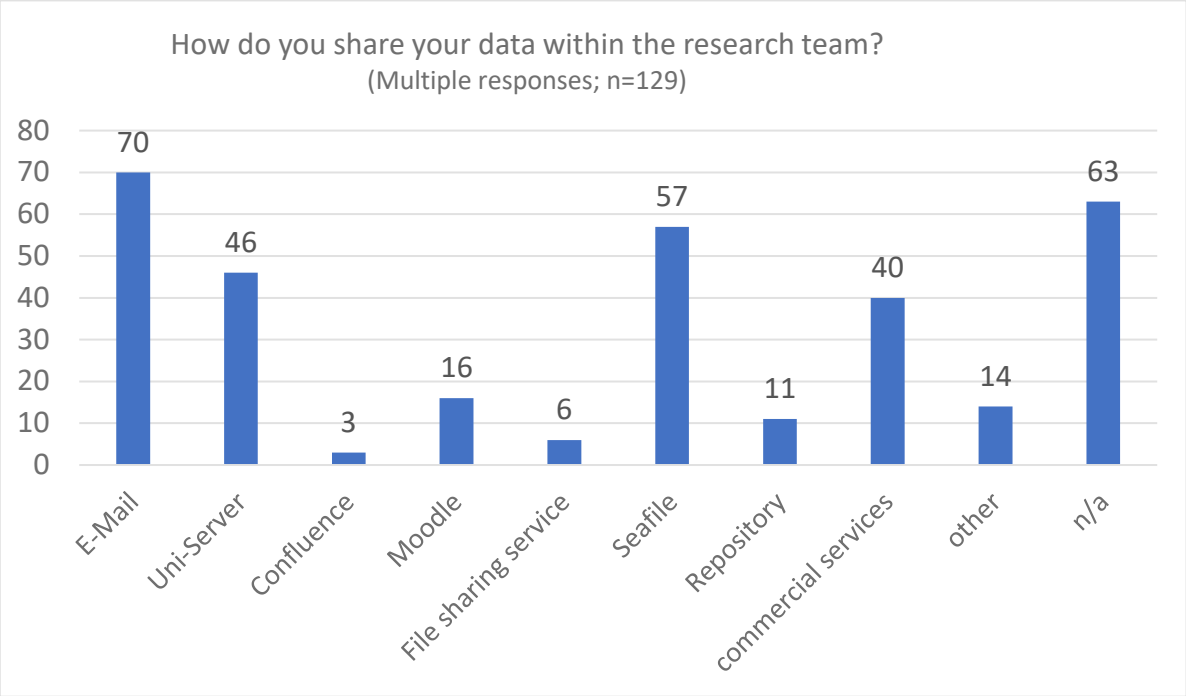


FD11: How do you currently share your data within the research team in the context of a research project?

Multiple responses possible:

- By email
- Via the university server
- Via Confluence
- Via Moodle
- Via file sharing service (e.g. ACOnet FileSender)
- Via Seafile
- Via a repository (e.g. Zenodo)
- Via commercial services (e.g. Dropbox, GoogleDrive, Wetransfer, etc.) ssss
- Other

Other information on sharing data refers to specific commercial services (Overleaf, Slack), gitlab.aau.at, Github and the repository of the Open Science Framework OSF, among others.

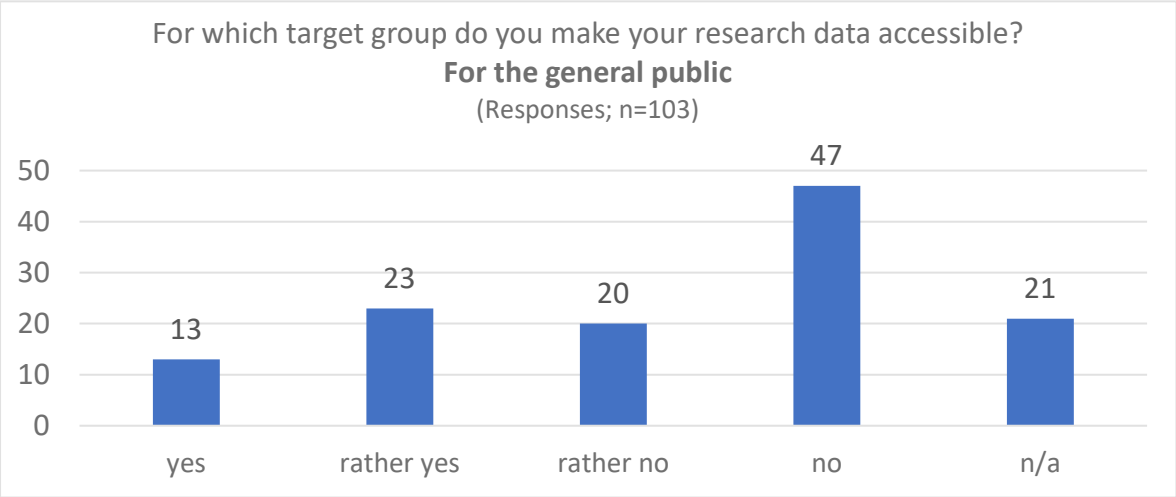


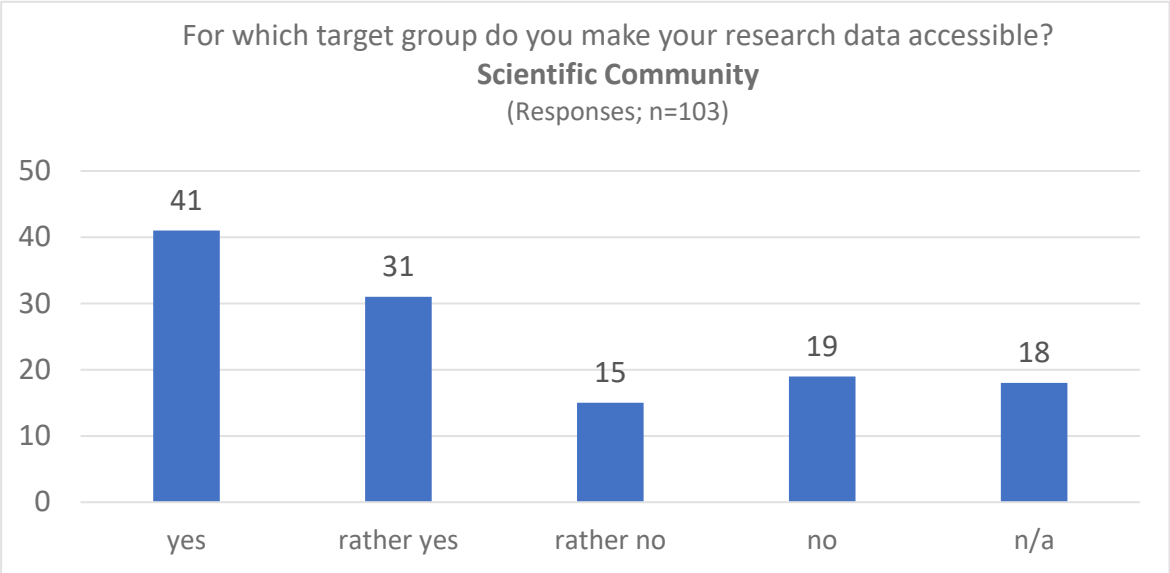
V. Data publication

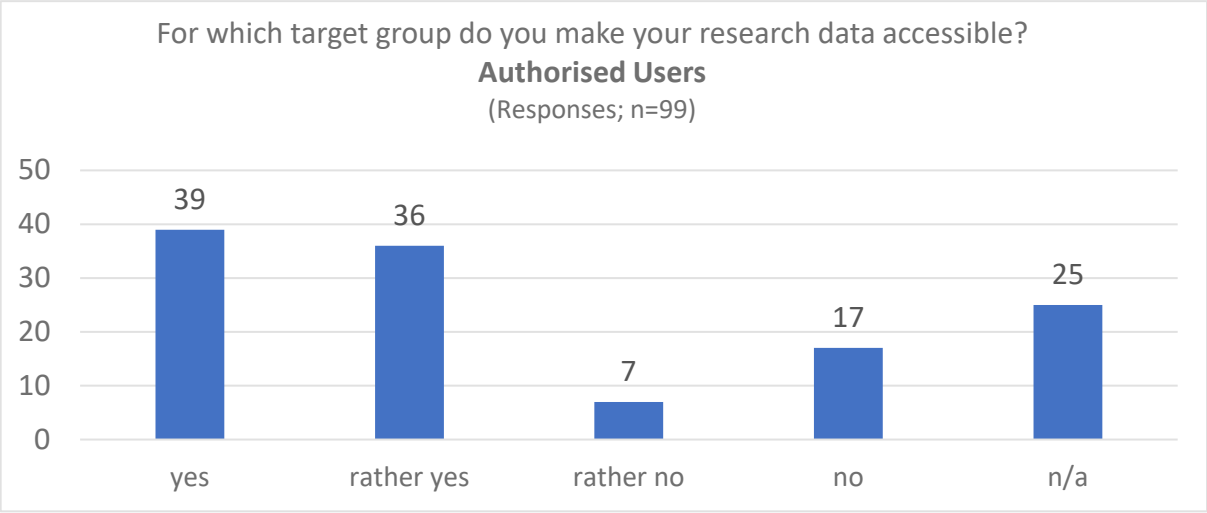
Data publication goes beyond sharing within the scientific project team and includes the accessibility of one's own research data for third parties. Certified research data repositories are suitable for both short-term sharing with third parties and long-term archiving.

FD12: For which target group do you make your research data accessible (taking into account the GDPR and discipline-specific ethical standards)?

- For the general public
- For the scientific community
- For authorised users (e.g. members of the faculty)
- For interested persons upon request
- The data is not made accessible.







For which target group do you make your research data accessible?
Authorised Users

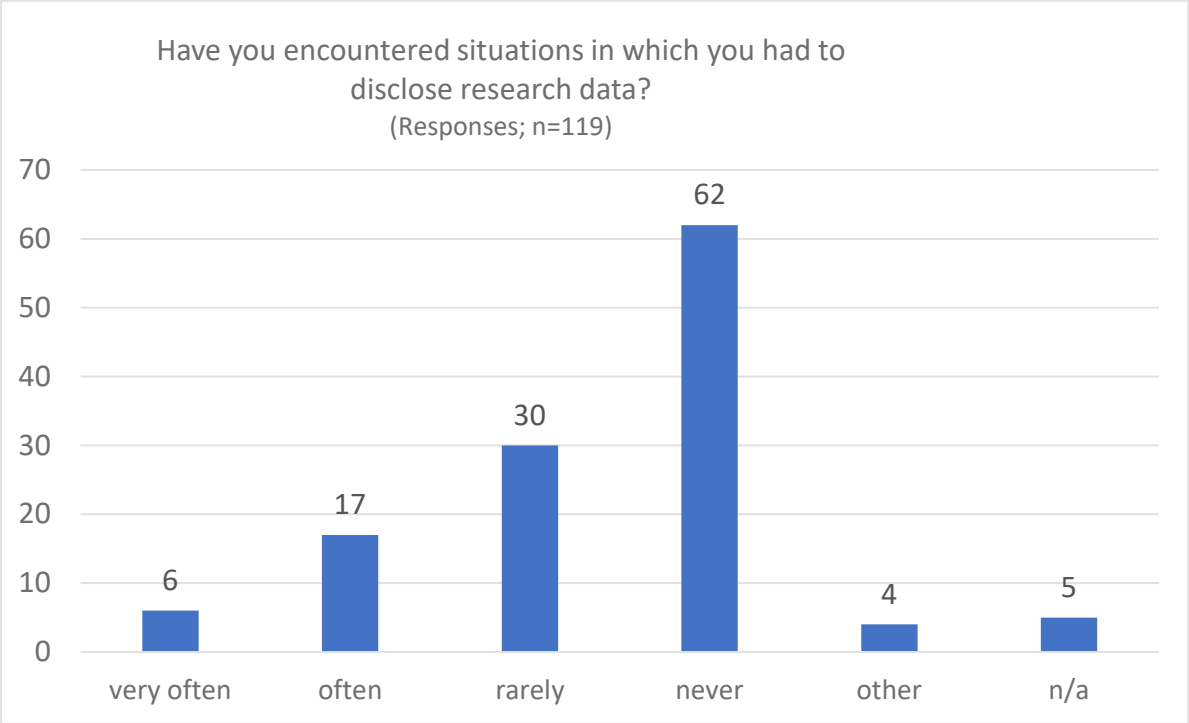
FD14: Have you encountered situations in which you had to disclose research data (e.g. for publications or in the course of third-party funded projects)?

Please choose only one of the following answers:

- Very often
- Often
- Rarely
- Never
- Other



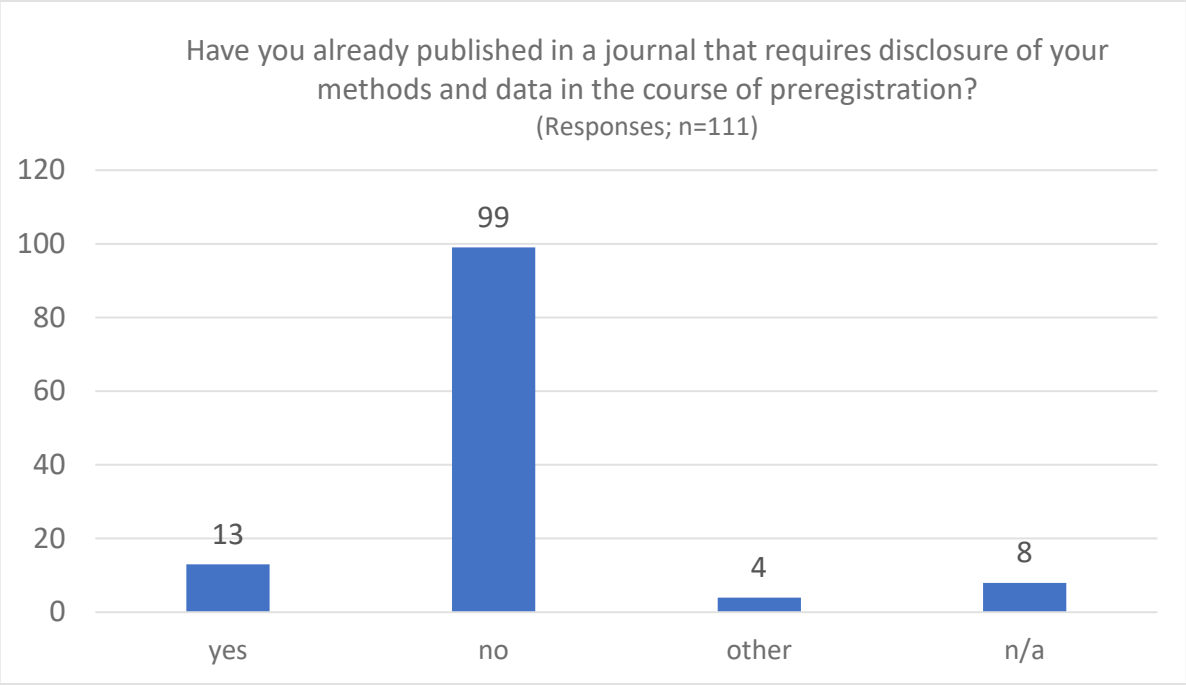
Comments on disclosure relate to disclosure in the context of peer review processes, the increasing frequency of such situations in recent years and discipline-specific requirements for good scientific practice (e.g. reproducibility in the context of data-based simulation research).

FD15: Have you already published in a journal that requires disclosure of your methods and data in the course of preregistration?

Prior to data collection, detailed preregistrations can be submitted as papers to an increasing number of journals in the form of preregistered reports.

Please choose only one of the following answers:

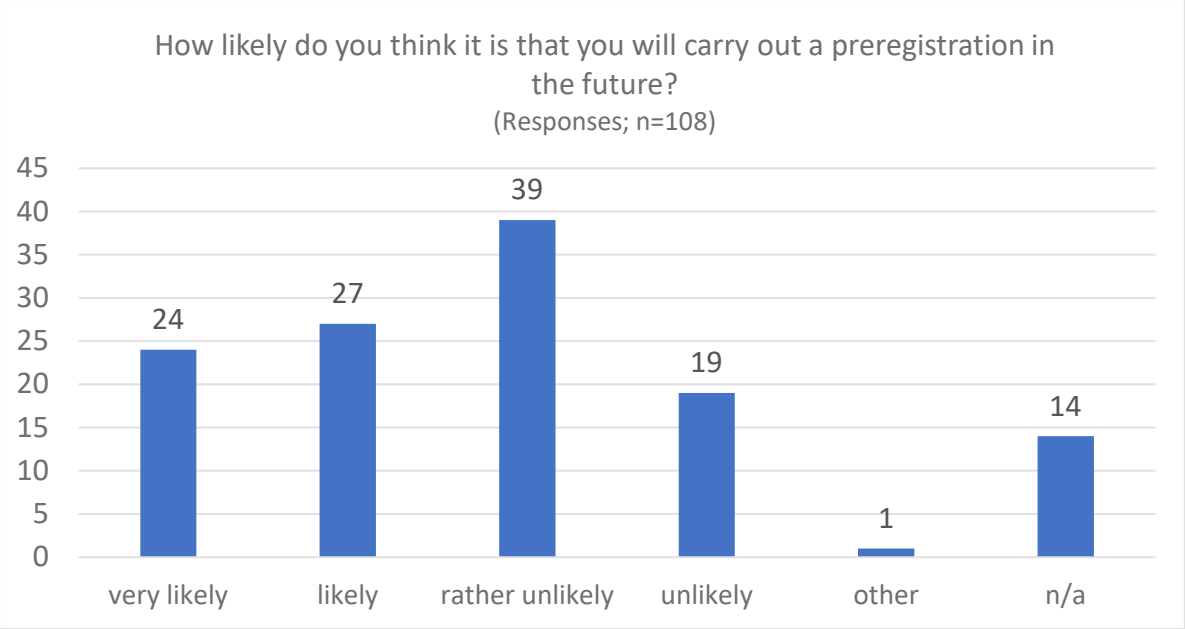
- Yes
- No
- Other



FD16: How likely do you think it is that you will carry out a preregistration for a scientific contribution (e.g. journal article) in the future?

Please choose only one of the following answers:

- Very likely
- Likely
- Rather unlikely
- Unlikely
- Other
- n/a



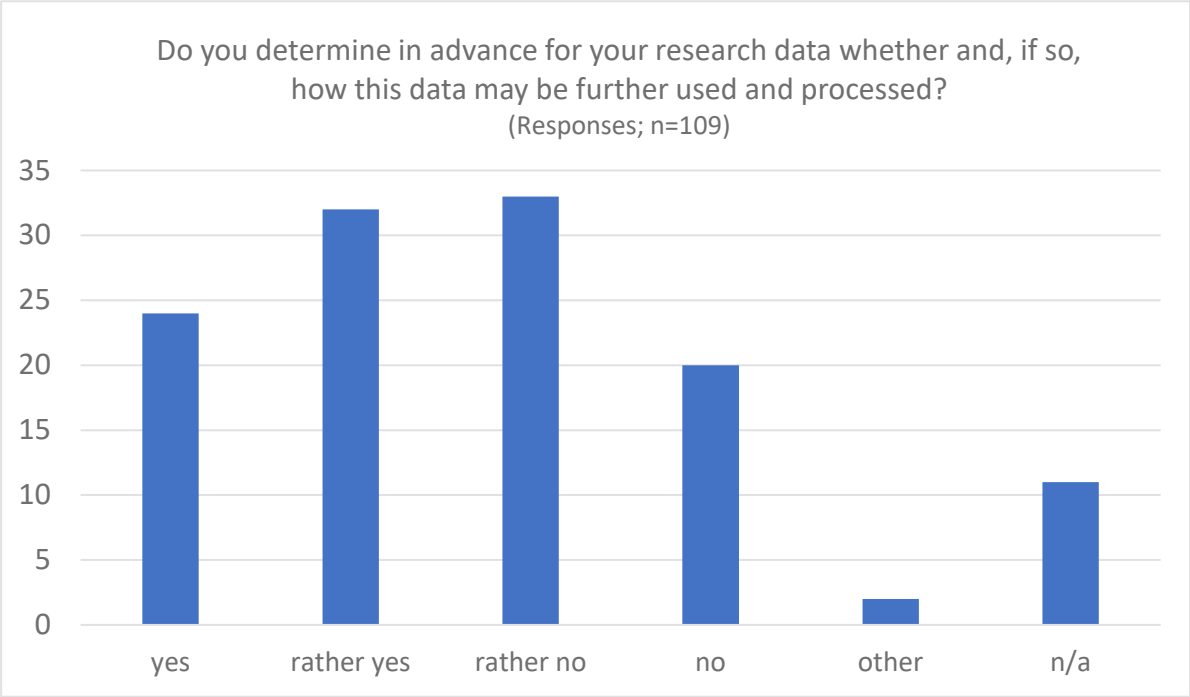
VI. Reuse of your own data

FD19: Do you determine in advance for your research data whether and, if so, how this specifically prepared data may be further used and processed?

The reusability of research data goes beyond its accessibility. Making data reusable implies, among other things, that it is determined whether and possibly also how this data may be reused and processed (e.g. through the use of [Creative Commons licenses](#)).

Please choose only one of the following answers:

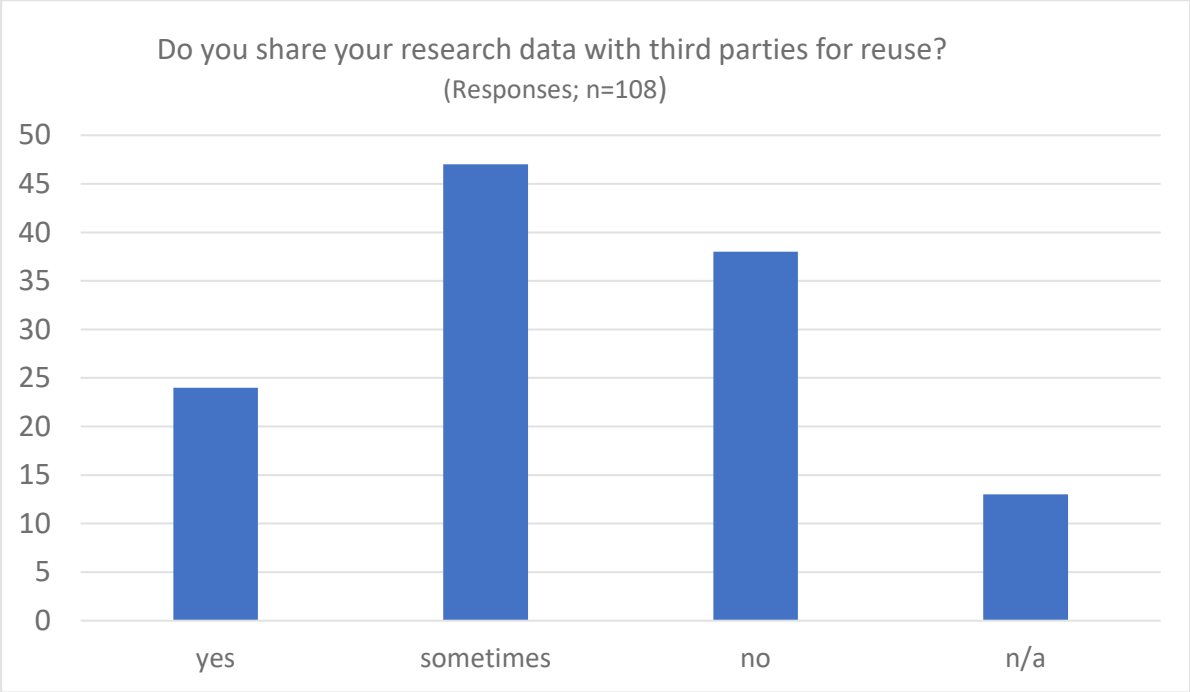
- Yes
- Rather yes
- Rather no
- No
- Other
- n/a



FD20: Do you share your research data with third parties for reuse?

Please choose only one of the following answers:

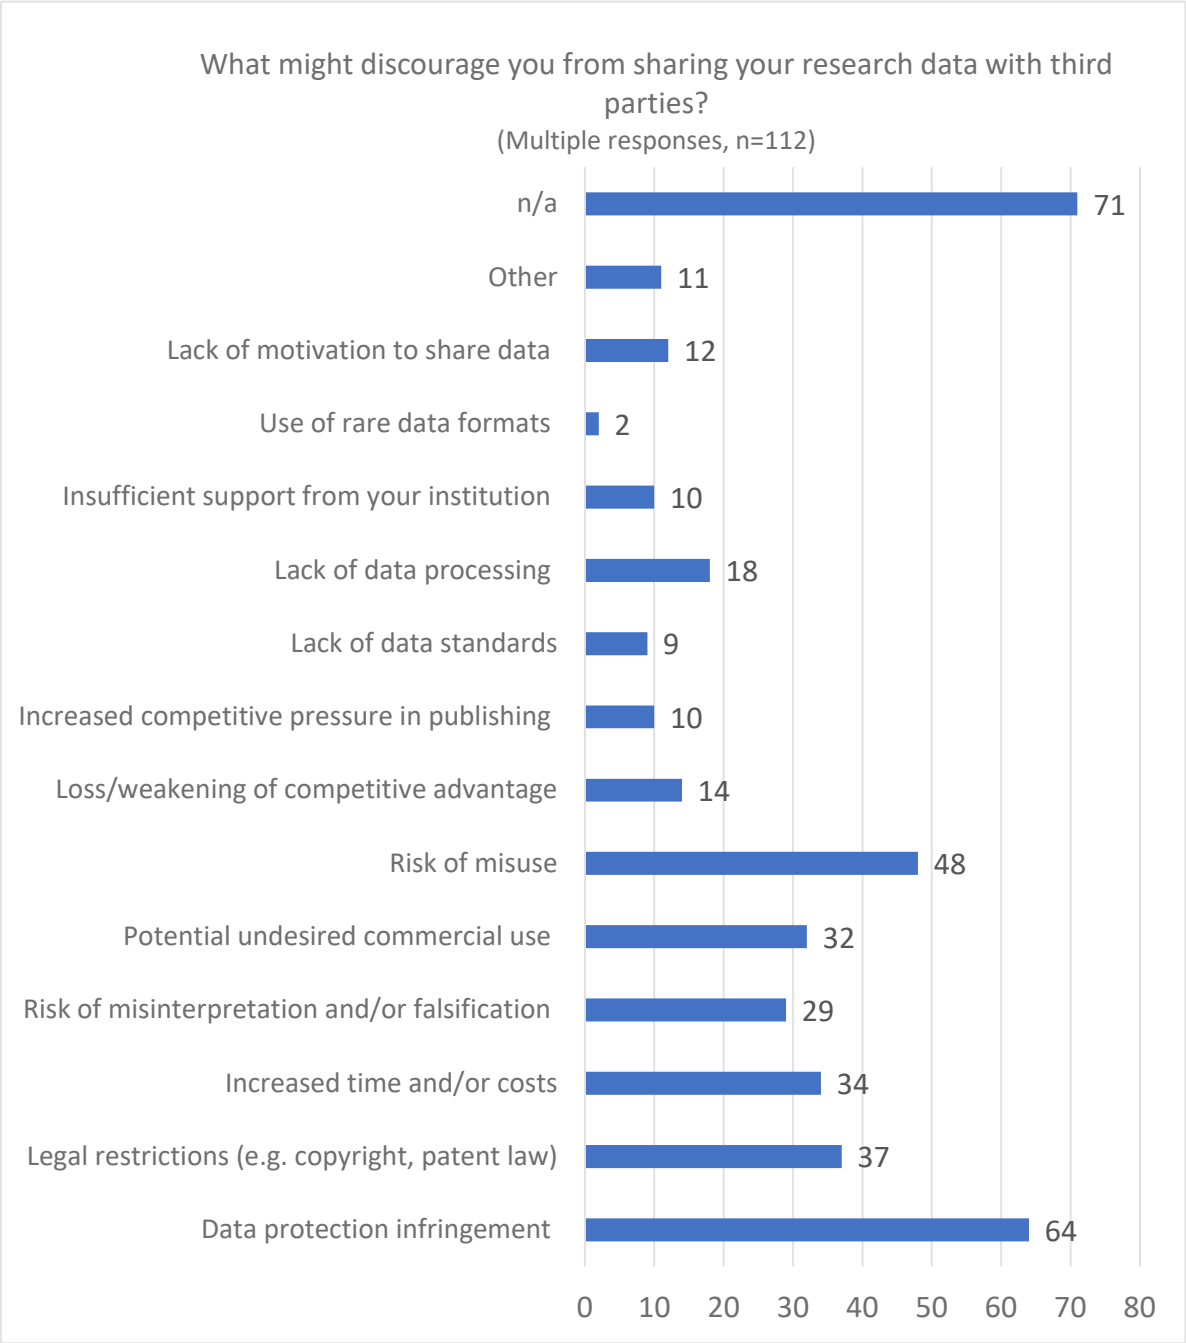
- Yes
- Sometimes
- No
- n/a



FD21: What might discourage you from sharing your research data with third parties?

Please choose all that apply:

- Data protection infringement
- Other legal restrictions (e.g. copyright, patent law, trademark protection, protection of use)
- Increased time and/or costs
- Risk of misinterpretation and/or falsification of the data
- Potential undesired commercial use
- Risk of misuse
- Loss/weakening of competitive advantage
- Increased competitive pressure in publishing
- Lack of data standards
- Lack of data processing
- Lack of or insufficient support from your institution
- Use of rare data formats
- Lack of motivation to share data
- Other



Other comments:

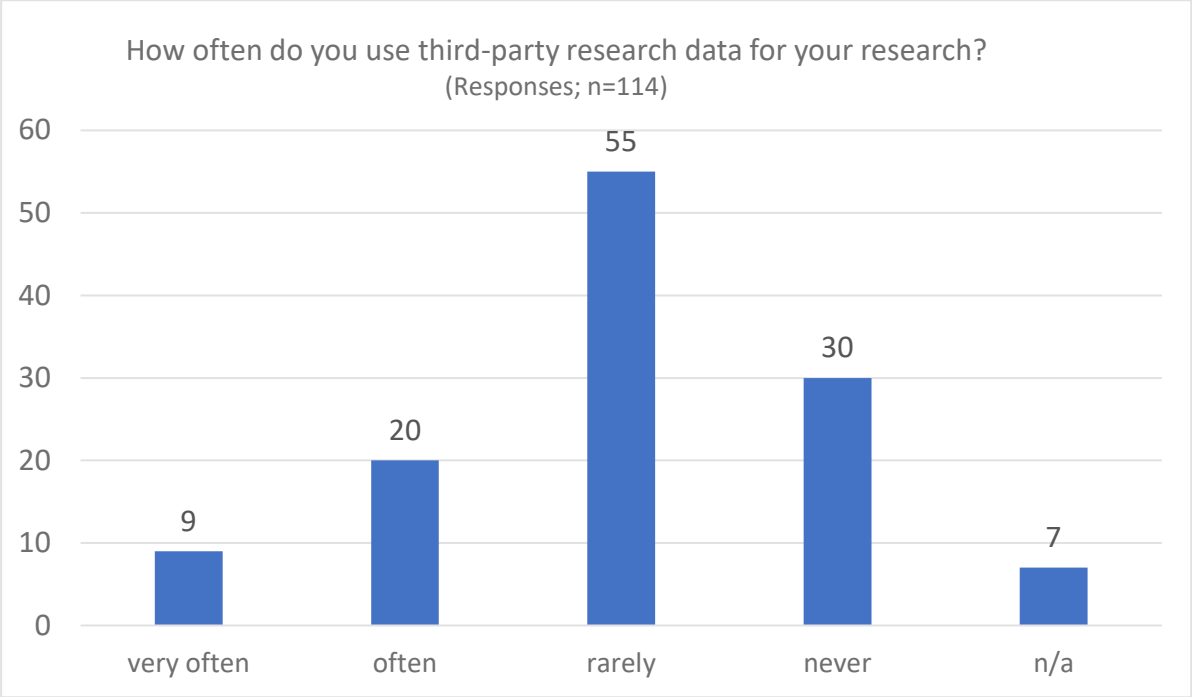
- Research ethics for the protection of qualitative research relationships beyond data protection
- Lack of expertise in pseudonymisation/anonymisation procedures for qualitative data
- Lack of third-party interest in the research data produced
- Lack of trustworthy research data repositories in the research community
- Fear that requesting informed consent under data protection law would reduce participation in a research study

VII. Reuse of third-party research data

FD22: How often do you use third-party research data for your research?

Please choose only one of the following answers:

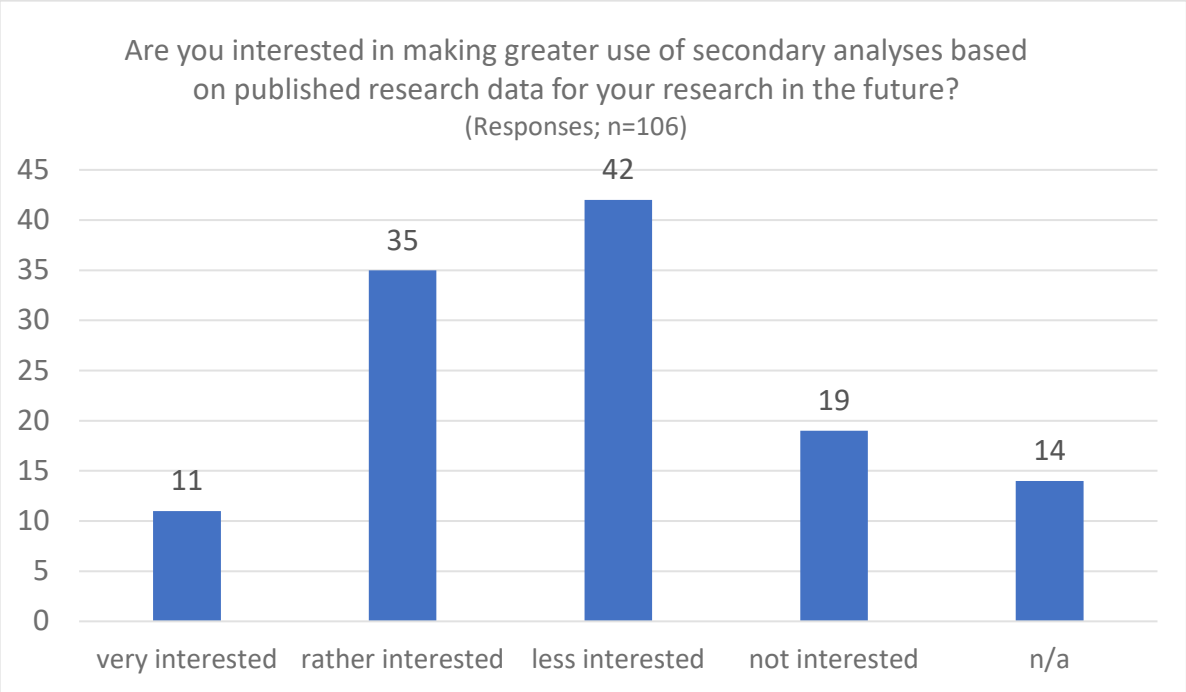
- Very often
- Often
- Rarely
- Never
- n/a



FD23: Are you interested in making greater use of secondary analyses based on published research data for your research in the future?

Please choose only one of the following answers:

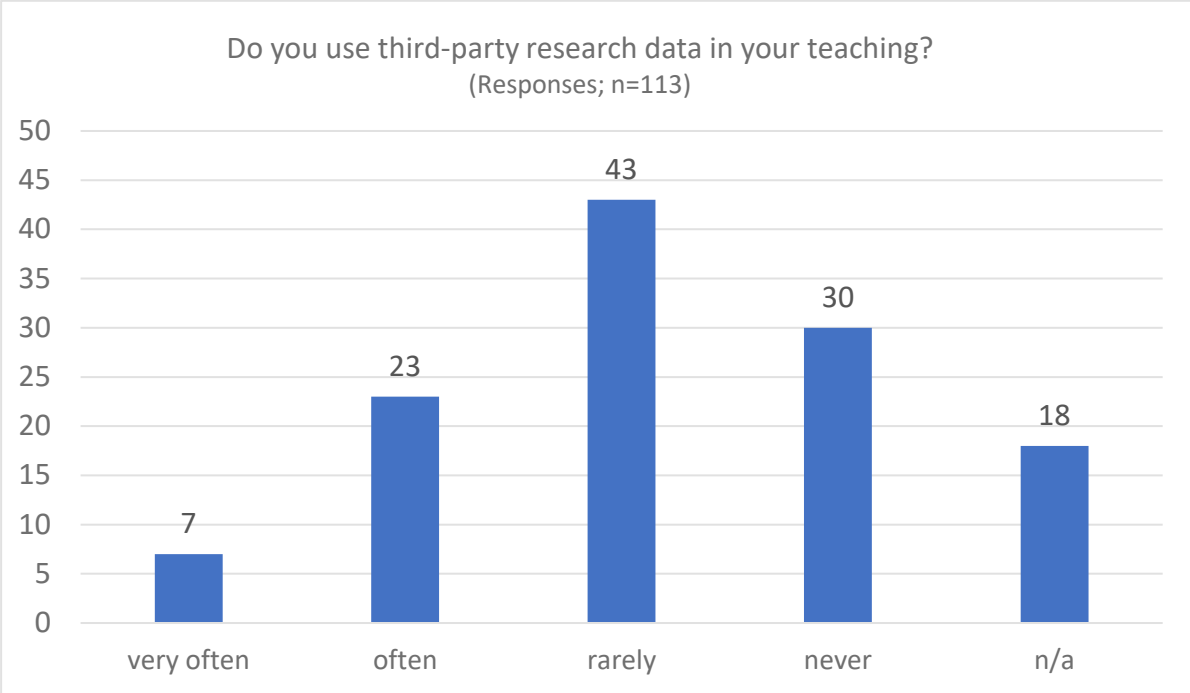
- Very interested
- Rather interested
- Less interested
- Not interested
- n/a



FD24: Do you use third-party research data in your teaching?

Please choose only one of the following answers:

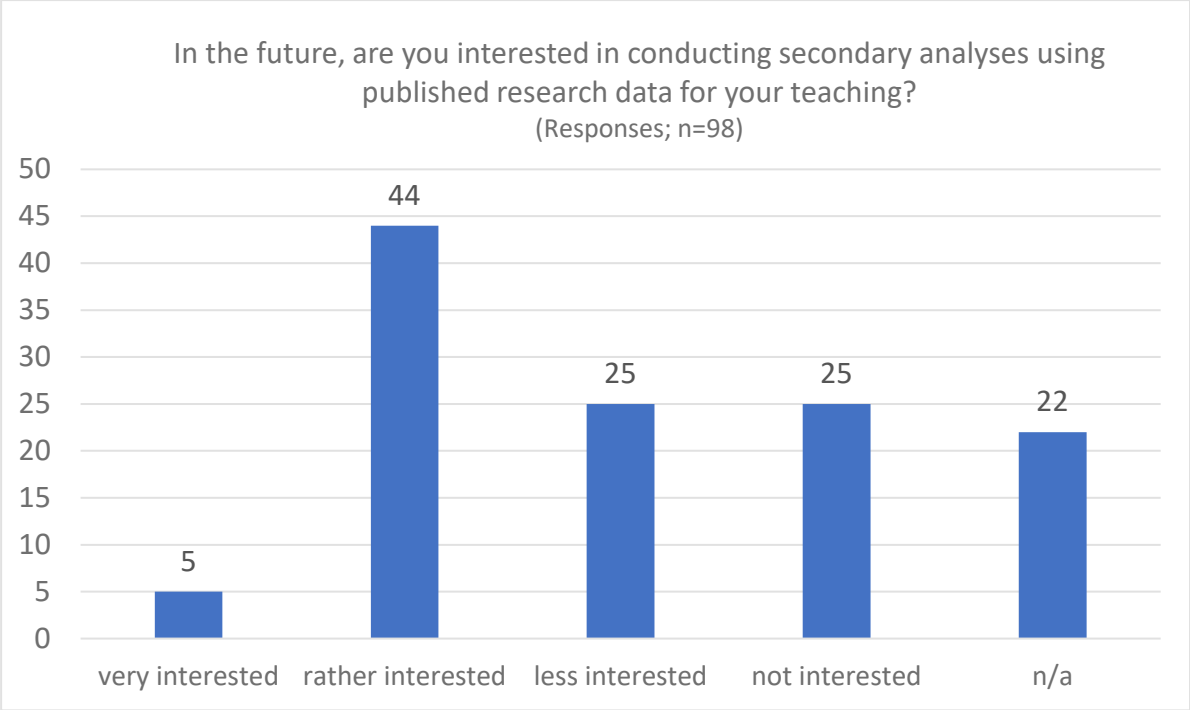
- Very often
- Often
- Rarely
- Never
- n/a



FD25: In the future, are you interested in conducting secondary analyses using published research data for your teaching?

Please choose only one of the following answers:

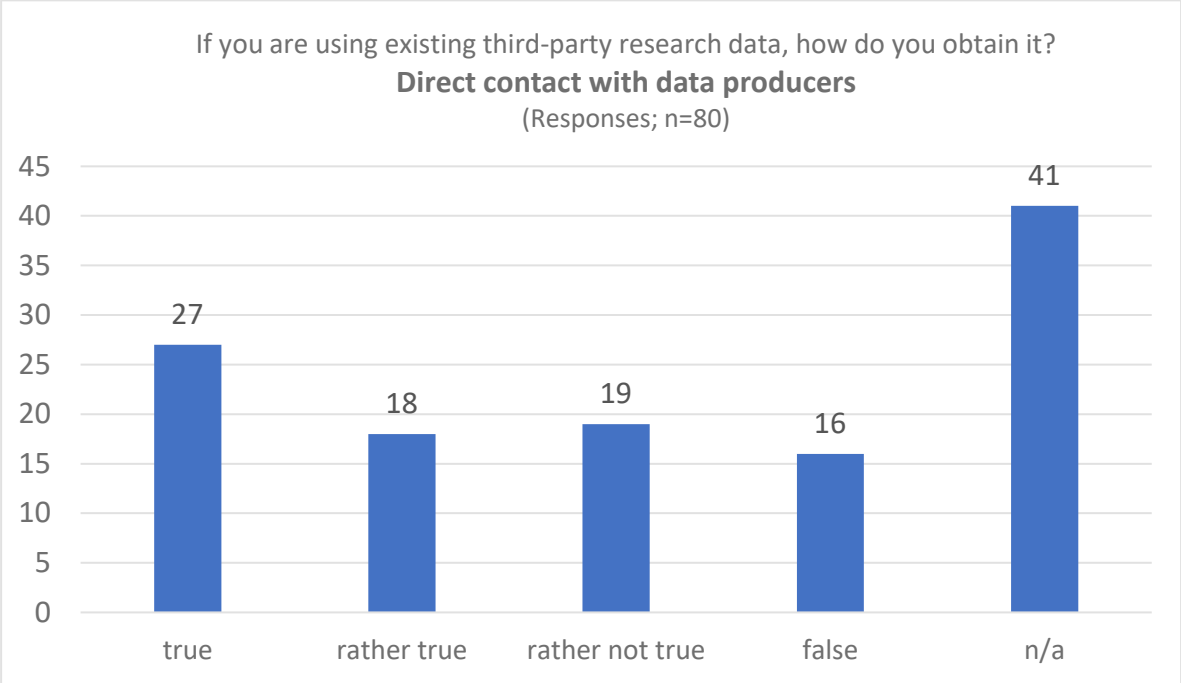
- Very interested
- Rather interested
- Less interested
- Not interested
- n/a



FD 26: If you are using existing third-party research data, how do you obtain it?

Please choose the appropriate response for each item:

- I obtain data through direct contact with data producers.
- I obtain data through supplementary files linked to publications.
- I obtain data from data repositories or similar platforms.
- Colleagues recommend/share data with me.
- I carry out open searches (e.g. PubMed, Google Scholar, Microsoft Academic, web search).
- I search subscribed databases (e.g. Data Citation Index).
- I search the websites of researchers.
- I do not use existing research data.



If you are using existing third-party research data, how do you obtain it?
Direct contact with data producers

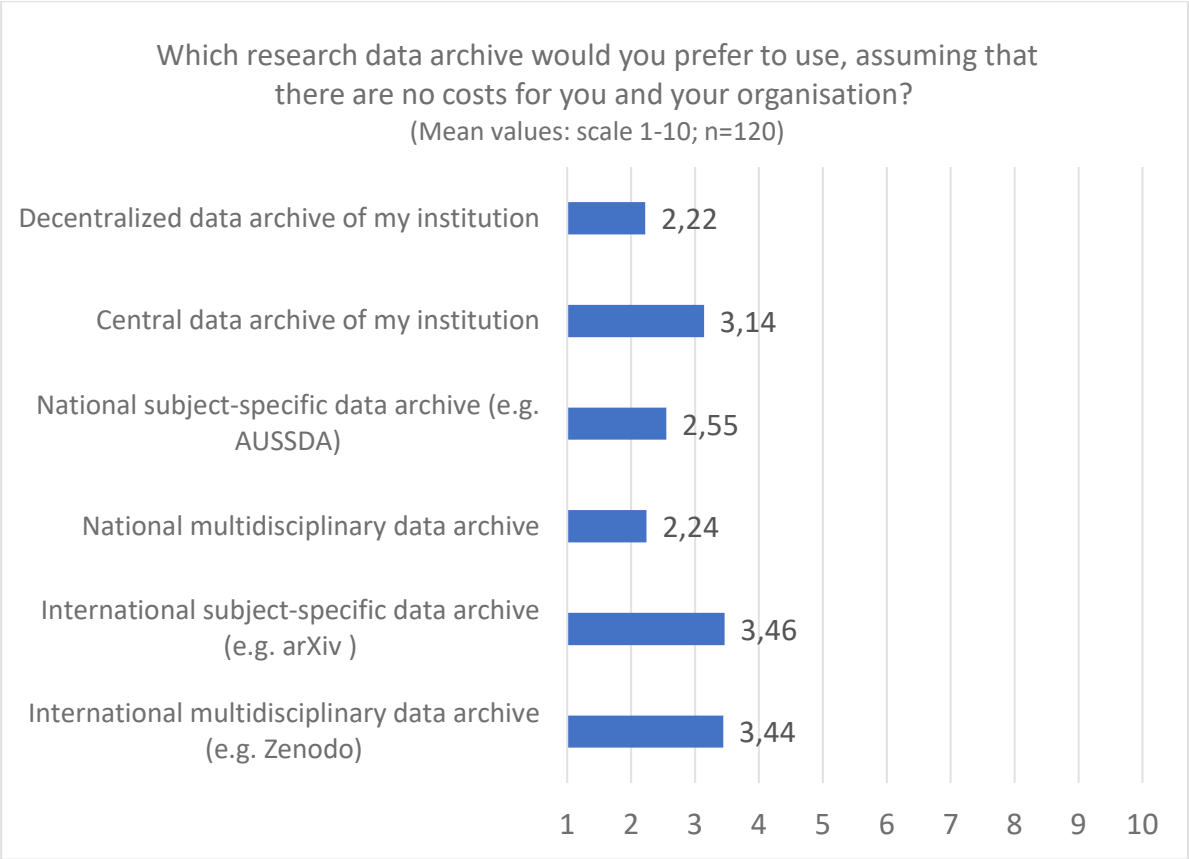
At the end of this block of questions, there was a free text field for respondents to name other ways in which they obtain access to third-party research data. Important mentions include archives, legal databases (such as RDB, LexisNexis, LindeOnline) and online corpora for language data, among others (e.g. SketchEngine, national corpora).

VIII. Closing questions on infrastructure and services

FD27: Which research data archive would you prefer to use, assuming that there are no costs for you and your organisation?

Please select a value from 0-10, where 0 means 'I wouldn't use it at all' and 10 means 'I would always use it'.

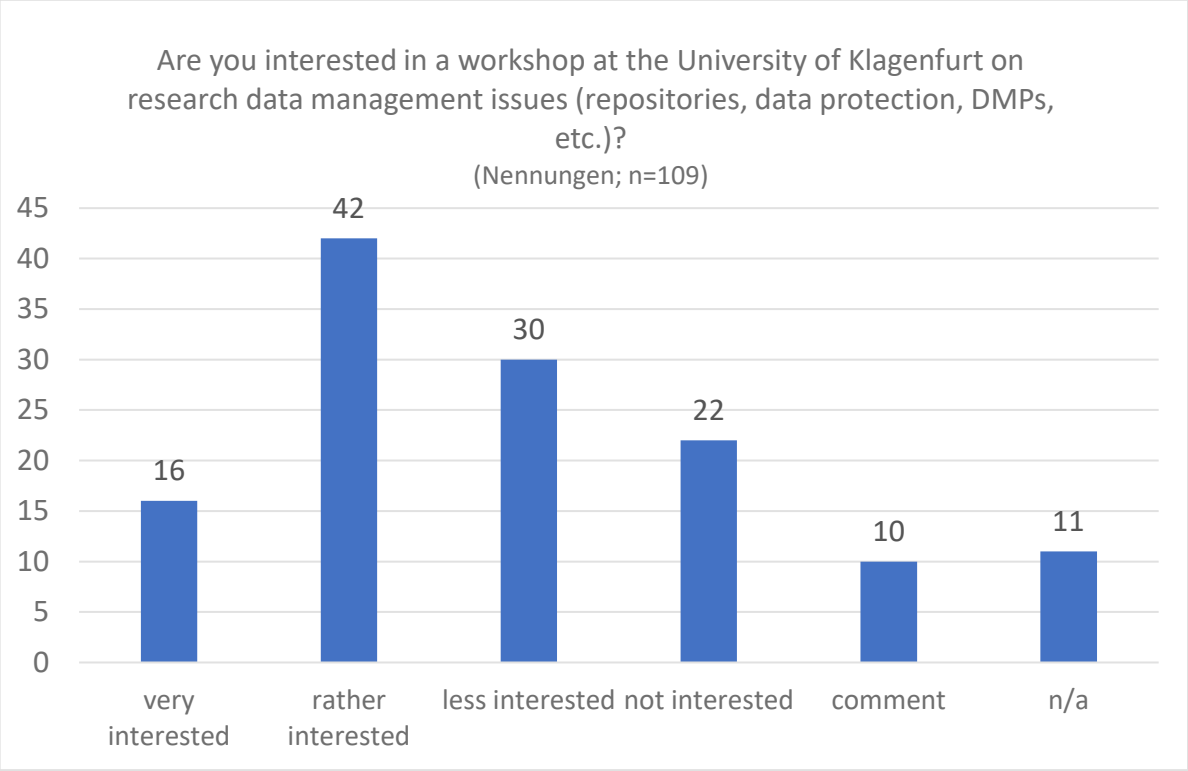


FD28: Are you interested in a workshop at the University of Klagenfurt on research data management issues (repositories, data protection, DMPs, etc.)?

Please indicate in the comments field if you have any special interests (DMP, data protection, etc.):

Please choose **only one** of the following answers:

- Very interested
- Rather interested
- Less interested
- Not interested
- n/a



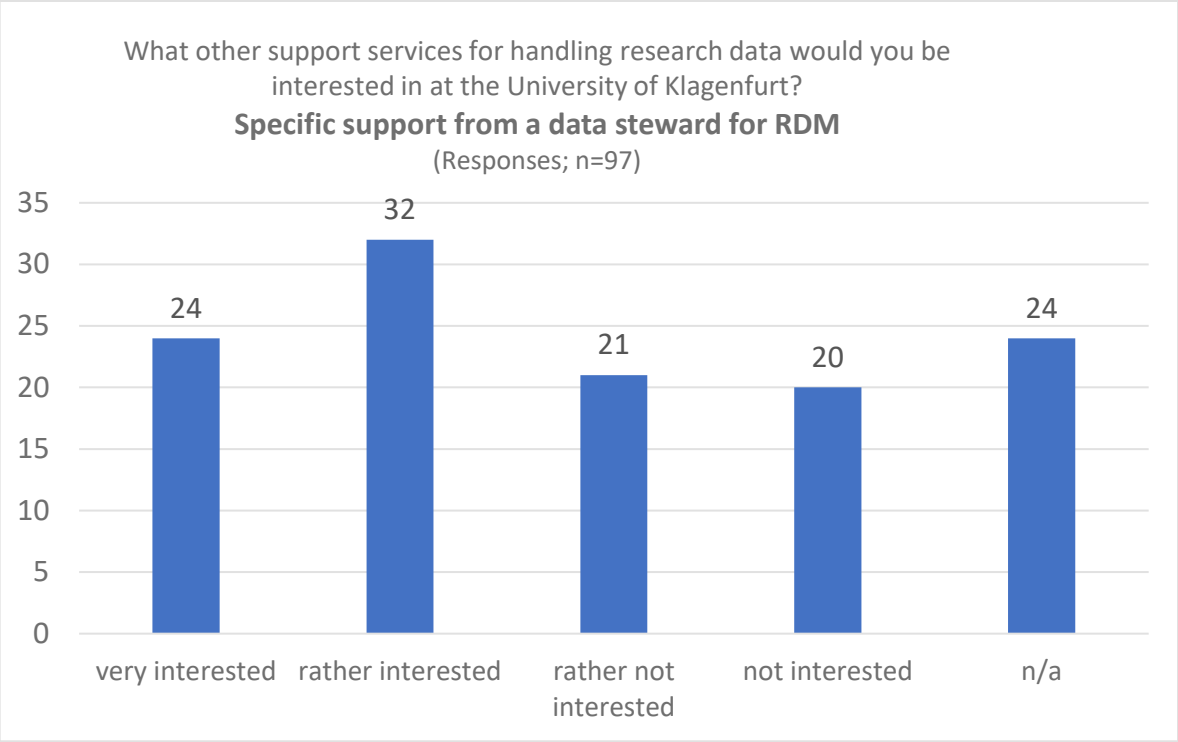
Summary of comments on requests for continuing education:

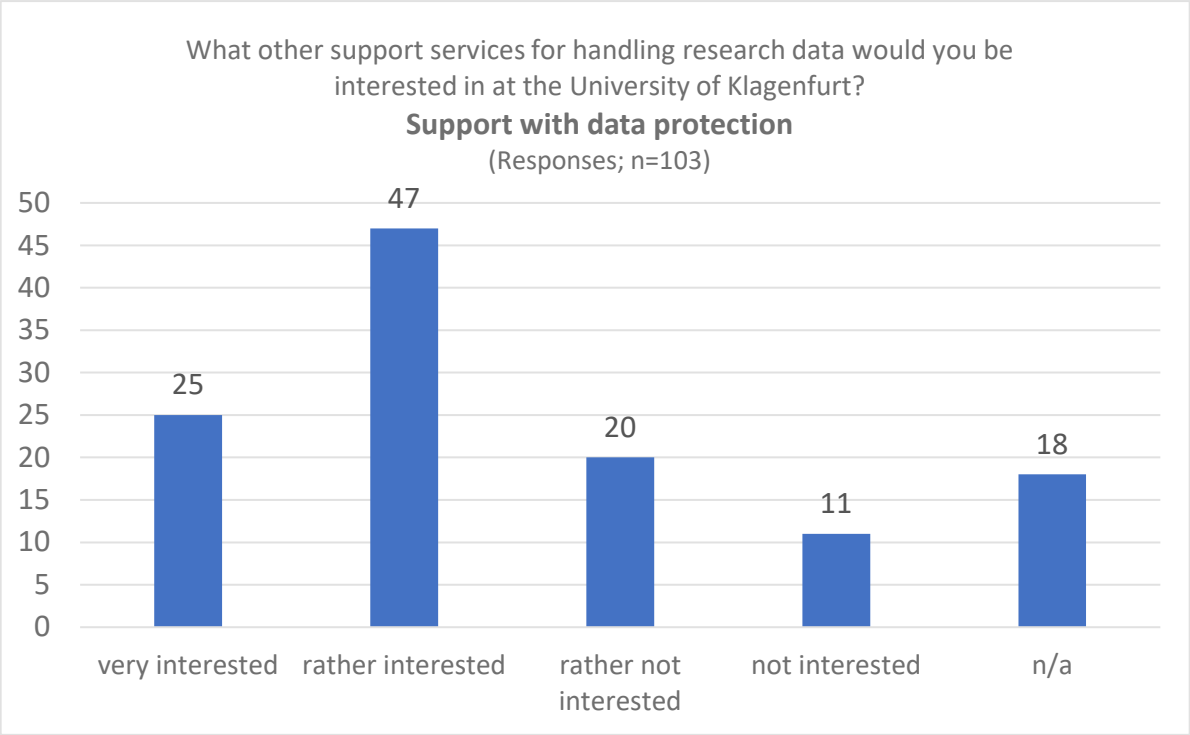
- Change in publication culture through publicly available research data and open science
- Case-specific consultation from the Research Support Service
- Research data management as part of the doctoral programmes
- Support with data protection and data storage

FD29: What other support services for handling research data would you be interested in at the University of Klagenfurt?

Please choose the appropriate response for each item:

- Specific support from a data steward for data management (e.g. data preparation, creation of a data management plan)
- Support with data protection/data privacy questions
- Legal advice (copyright law, patent law, contracts, intellectual property rights)
- Specific support for the technical infrastructure (e.g. from the ZID)
- A general guideline or policy on research data management at the University of Klagenfurt
- Establishing research data management as teaching content in the curriculum
- n/a
- Other





What other support services for handling research data would you be interested in at the University of Klagenfurt?
Support with data protection

FD30: Do you have any further comments or suggestions on the subject of research data?

Further comments are summarised below:

- Promotion of the public and transparent analysis of research data by the university
- Ensuring the protection of sensitive data by the university
- In-house research data repository at the university
- No obligation to publish research data (sensitive data)
- Consideration of discipline-specific differences in research data management
- Continuing education programme for researchers on RDM
- Contact person or discipline-specific data stewards
- University-funded cloud computing for large amounts of data
- Inclusion of research data as a research output in the university's current research information system (FoDok)
- Clear guidelines on RDM, integration of RDM into research project planning from the outset
