1 Introduction

The main intention of this method report is to describe the process of merging the national datasets into a harmonized international file published by the Austrian Social Science Data Archive (AUSSDA). This effort shall foster comparative research in times of a pandemic. Currently, the Values in Crisis (VIC) Survey is by our knowledge the only international survey project on attitudes and values providing data on a global scale. The international dataset is available as a compact version including mainly the harmonized variables of education, income, and region, the key variables of the survey and scales referring to classical value concepts (e.g. Inglehart, 1977, Schwartz, 1992; Schwartz et al., 2001)[5] or personality factors. Additionally, there is a full version, where country-specific questions deviating from the standard questionnaire are available for further single country analysis.

The report consists of four different parts. The section on sampling and data collection (section 2) describes the main challenges to come to a meaningful comparative dataset and highlights some deviations which demand caution while interpreting the data. Details on the combined education and income measurements and on value and personality scales provide basic information about our adopted procedures (section 3). Furthermore, the harmonization required many minor country-specific changes due to translation aspects or different usage of coding. The report summarizes these changes to the data only in case of potential interpretation bias (section 4). Detailed descriptions about single country characteristics of variables are beyond the scope of this report.

Our process of data archiving started in November 2020. We invited all contributors of the memorandum of understanding to submit their data. In line with the rules of the data archive AUSSDA, an official contract between each national team and AUSSDA were a requirement for participation. In a first step, the archiving team assessed all national datasets and provided an overview of all deviations. The cross-national identical applied source questionnaire has the following structure (see Table 1). This structure is further used to document the country specific deviations in section 4 of this report.

Table 1: Structure of source questionnaire and corresponding structure in harmonized dataset

	Questions in	
Theme	Source Questionnaire	Harmonized Dataset
Demographics	Q01-Q09	Q01-Q08, Q09 country specific
Crisis Experience and Perception	Q10-Q20	Q10-Q20
Value Orientations	Q21-Q29	Q21-Q29, Inglehart and Schwartz Scales
Personality Traits	Q30-Q31	Q30-Q31 + Big Five Inventory and empathy scale
Social and Political Orientations	Q32-Q40	Q32-Q40

2 Sampling and data collection

VIC is an initiative by a group of well-known researchers in Germany and the UK.[6] The core team developed a questionnaire and invited additional researchers from various countries all over the world to join the project by collecting data in their respective countries. The COVID-19 crises confined the survey mode to an online-panel adopting a quota sample. The target was to interview approximately 2,000 respondents in three consecutive waves, using a fully standardized questionnaire of about twenty minutes interview time. This method report summarizes the first wave of this panel called "Amidst the crisis": Most of the national surveys were conducted in spring 2020, although some countries had to secure funding and started the survey up to half a year later (see Table 2). Wave 2 of the survey called "End at sight" is planned for spring 2021 and wave 3 "After Recovery" should be conducted when most of the world regions have hopefully overcome the crisis.[7]

The teams had to secure funding and to take responsibility for translating and adapting the English source questionnaire. In the light of this process, national teams made changes to the questionnaire to either include further items or adapt the questions to make them more comparable to other country-specific surveys. This is a common challenge in international surveys as a strict implementation of common rules is a trade-off between methodological equivalence and context specific adaptations to cover meaningful concepts. Furthermore, strictly harmonized surveys require often a common funding, which is difficult to manage on a global scale. The core team of the VIC survey decided to follow the flexible approach and integrated all participants by a memorandum of understanding covering the possibility of open access data sharing and cooperation.

After finishing the first wave, a team from the University of Salzburg and the Austrian Social Science Data Archive (AUSSDA), in the following called the archiving team, started to merge and harmonize the national data sets to make the data available for all participants, to archive it and to make it available to the research community. This document provides information on this process and the respective changes. The merged data contains less variables than the national data sets, and this document can only reflect the work by the archiving team to their best knowledge.

In total, 17 countries contributed to wave 1 of the survey: seven countries in Europe (Germany, Austria, UK, Sweden, Poland, Italy, Greece), two Latin American countries (Brazil, Colombia), five countries from Asia (Japan, China, Hong Kong, South Korea[8], the Maldives) and three countries from the CIS states (Kazakhstan, Georgia, Russia). For details on country specific information, please contact the team responsible indicated in Table 2.

7 see https://wapor.org/values-in-crisis-a-crisis-of-values-moral-values-under-the-imprint-of-the-corona-pandemic/ for further information.

8 In South Korea two teams decided to conduct the survey independently. Due to different sample constellations it is not possible to pool the data. That is the reason why we have two Korean files (South Korea 1 and South Korea 2) in the dataset.

Table 2: Fieldwork period, mode and contact partner of the national surveys

3 Data processing

The following sections report the general procedures applied in the harmonization process. Aiming for high comparability across samples, harmonization of demographic information is one of the major tasks in merging national datasets (see section 3.1). Merging thematic questions posed only few problems with minor deviations in single countries. In addition, the archiving team provides a few composed measures. The VIC-questionnaire includes a common instrument to measure basic values (Schwartz et al., 2001)[9], the Inglehart Index (Inglehart, 1979)[10] and concepts referring to personality factors (e.g. Big Five or Empathy). The main procedures to compute these higher-order values are reported in Section 3.2.

3.1 Harmonization of demographic information

With regard to the harmonization of demographic information, we start with some general remarks regarding age, gender, marital status, and living areas. Then we highlight with more detail the procedures regarding education and income.

- Regarding age, some surveys gathered data from persons younger than 18 years, while most of the countries covered the population 18 years and older. Thus, the youngest age group is defined as 14 to 19 years, although for most samples the minimal age in the sample is 18.
- Gender categories are female, male and other in the source questionnaire but most of the countries decided to use gender as a dichotomous variable. The category other has low frequencies, which made it necessary for reasons of anonymity to exclude the information.
- The scales differed in some countries for marital status and the living area. The specific categories of the variables of marital status and living area were assigned to other categories (see section 4 for country specific details).
- Number of household members beyond seven persons are sparse in most countries, which makes it necessary for reasons of anonymity to limit the maximum number of household members to the category six and more household members.
- The question on the number of children is categorical in the source questionnaire and due to low frequencies in categories above three children, the scale maximum is three and more children.
- The question on living area has five categories in the source questionnaire. Low counts on people living in “a county village” or “a farm or home in the countryside” required combine both categories into a single one.

3.1.1 Education

The International Standard Classification of Education (ISCED) by the UNESCO (2012)[11] is the reference for the international harmonization of education. Although the UNESCO provides country mappings for the ISCED revision 1997 and 2011 for most countries covered by VIC, the ISCED level assignment relies

9 Schwartz, S.H., et al. (2001). Extending the cross-cultural validity of the theory of basic human values with a different method of measurement. *Journal of Cross-Cultural Psychology*, 32, 519–542.

10 Inglehart, R. (1979). *Value priorities and socioeconomic change.* In S. Barnes & M. Kaase (Eds.), Political action: Mass participation in five Western democracies (S. 305–342). Beverly Hills: Sage Publications.

11 UNESCO Institute for Statistics. (2012). *International standard classification of education: ISCED 2011*. Montreal: UNESCO Institute for Statistics.

on the recommendations of the national teams. The report of national teams about deviations between formal and perceived educational attainment motivates this procedure.

The national teams assigned ISCED levels to the original education variable according to Table 3.

Table 3: ISCED level assignment to education levels from source questionnaire

Highest educational level	ISCED Level
Early childhood Education	0
Primary education	1
Lower secondary education	2
Upper secondary education	3
Post-secondary non-tertiary education	4
Short-cycle tertiary education	5
Bachelor or equivalent	6
Master or equivalent	7
Doctoral or equivalent	8

After a first regrouping, the ISCED scale has seven categories with 6 being the maximum and comprising bachelor, master and doctoral degrees (ISCED level 6-8). Some country samples miss detailed information on the ISCED scale due to less differentiated education measures in the national questionnaire. Hence, a shortened three level ISCED oriented education variable distinguishes low education (ISCED levels 0-2), medium education (ISCED levels 3-4), and high education (ISCED levels 5-8). This indicator is finally the central variable to differentiate between educational levels in all participating countries.

3.1.2 Household income

Harmonizing the household income poses challenges as national currencies and living standards differ significantly across the world. Taking a look at the World Bank, the International Monetary Fund, OECD, Eurostat or other international comparative data sources revealed that most countries rely on an equivalized household income per capita. E.g., Eurostat applies the so-called OECD-modified scale weighting the first adult household member with 1, every adult beyond with a weight of 0.5 and each child with 0.3. In the calculations for household income no equivalence scales were used.

This kind of measurement could not be used here, because VIC asked for the household income and the number of persons living in the household, but not for the composition of the household as required for the construction of equivalence scores. A second issue is the application of different scales across the countries as some asked weekly, monthly or yearly income. Additionally some national teams relied on six-point scales and others on 16. Hence, constructing an equivalized score for household income would induce some additional assumptions, which should rest in the researcher's hands. The archiving team aimed for constructing income quartiles, which seemed a sufficient common denominator to analyse different value orientations and attitudinal discrepancies between different income groups and

to enable a comparative measure of income inequality within the countries. We recommend to use household size as control variable in all calculations implying household income.

The general procedure to derive quartiles was always identical although the available data required different transformations. First, the best possible data on the distribution of household income was gathered. Based on this information, we derived quartiles, mostly by linear transformation of deciles or quintiles.[12] With the calculated quartiles, we assigned the original coding of the household income variables to the specific quartile. As all countries gathered income in categories with ranges, we used the quartile with the highest overlap with the range. The result has been cross-validated with the national teams.

3.2 Harmonization of crisis experience and perception

The question on the health situation during the Corona crisis has six items in the source questionnaire. The items "I have been tested positively for COVID-19" and "I have been tested negatively for COVID-19" were excluded from the harmonized dataset for reasons of anonymity due to a low number of cases. For the same reason, items which indicate "mild symptoms" or "severe symptoms" for the respondents and for persons close to them were assigned to two items. Thus, this original scale of six indicators had to be reduced to two indicators in the international dataset.

3.3 Harmonization of value scales and personality traits

3.3.1 The Inglehart Index

The VIC study is devoted to the study of values in times of crisis. Thus it is of major relevance to conceptualize well-functioning measurements of values which enable sophisticated conclusions of value dynamics in the midst of the crisis. One of the first measurements which was integrated in the World Value Survey from the beginning, was the four-item scale of value priorities by Inglehart (1979)[13], it is called the Inglehart Index.

In the form of a ranking procedure, two materialistic and two post-materialistic goals are given and the respondents are asked to name one goal of the first and one of second priority (Inglehart & Abramson, 1999)[14]. Based on the judgements of the respondents it is possible to assign individuals to materialists, post-materialists and mixed types. Overall, the measurement is rather superficial but it has led to tremendous research over the last decades. A standard variable allows to compare the proportion of people being clearly materialist, favouring materialism, favouring post-materialism and falling into the category of clear postmaterialists.

---

12 In most countries, the income distribution between the first and the fourth quintile are rather linear and as the quartiles fall into this range, we consider the estimates as fair approximations – especially in light of the application on categories in the next step.

3.3.2 The Schwartz values

In addition, VIC includes the value concept of Shalom Schwartz (1992)[15] measuring 10 individual value orientations.

Schwartz (1992)[16] has developed extensive scales trying to measure explicitly people's basic values. The core of his value theory is the circular arrangement of key value orientations, which could also be empirically confirmed. The ten individual value orientations thus form a continuum, with incompatible values opposing each other in the circular structure and values highlighting similar goals being adjacent. In addition, Schwartz formed two superordinate bipolar dimensions. In the dimension of openness to change vs. conservation (simply put: individualism vs. conformism), values that push individual thinking and action or emphasize the preservation of security and tradition are opposed to each other. The second bipolar dimension of self-enhancement vs. self-transcendence (simply expressed: egoism vs. altruism) describes the striving for one's own success and dominance vs. the acceptance of others as equal.

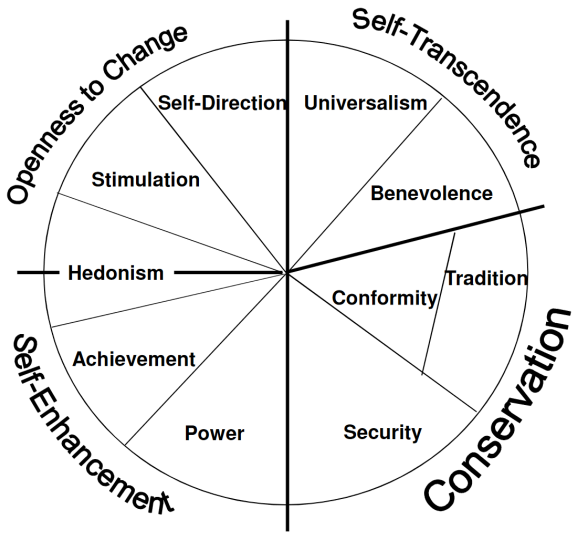

Figure 1: The classical circumplex structure of values according to Schwartz (Schwartz, 2012)[17]

After establishing his value theory Schwartz et al. (2001)[18] developed a new scale, which is more suitable for representative population surveys, called the Portrait Value Questionnaire (PVQ). This scale consists of 40 short verbal portraits of individuals. The portraits indicate the goals and expectations of the individuals and thus implicitly address the importance of their values. The respondent must indicate on a six-point scale how similar he or she feels to the person.

17 Schwartz, S. H. (2012). An Overview of the Schwartz Theory of Basic Values. *Online Readings in Psychology and Culture*, 2(1). https://doi.org/10.9707/2307-0919.1116

18 Schwartz, S.H., et al. (2001). Extending the cross-cultural validity of the theory of basic human values with a different method of measurement. *Journal of Cross-Cultural Psychology*, 32, 519–542.

For the VIC study, the shortened version of the PVQ (21 indicators) was used, which was also implemented in the European Social Survey, one of the major survey instruments in Europe. Although this scale is also rather limited, because each value is just measured by two to three items, the scale provides a comprehensive measurement of individual value orientations. It often makes sense to calculate higher-order values and to integrate the higher-order dimensions to come to more reliable conclusions. That is the reason why the data contains different potential value measurements out of the Schwartz-scale. The ten value orientations were calculated adopting the scale use correction because it is important to correct for individual and cultural differences in scale use. We fully followed the procedures to come to reliable scales which are recommended by Schwartz (2010)[19]. The indices of the ten individual values were further used to create the higher order values and two bipolar dimensions of openness to change vs. conservation of order and self-enhancement vs. self-transcendence. The two opposite dimensions (which usually form a sufficient negative correlation) were subtracted from each other. Thus all researchers are also able to depict the value landscape of participating countries in a two-dimensional coordinate system.

3.3.3 The measurement of personality traits

Besides common value instruments, the questionnaire captures personality scales. One of the well-known concepts in personality research is the BIG-Five approach (Costa & McCrae, 1992)[20], which states that the human personality consists of five major personality factors. In the survey, the 10-item based Big Five Inventory (BFI-10, see Rammstedt & John, 2007)[21] represents a short measurement of the five personality traits Extraversion, Agreeableness, Conscientiousness, Emotional Stability, and Openness. The scale was especially designed for multi-thematic questionnaires in which respondents' time is severely limited. For all countries applying the instrument, the harmonized data provides an average score for each dimension.[22]

Additionally, a few items of the sophisticated measurement of empathy by Davis (1983)[23] were used to calculate an empathy index. This computation is simply the mean of all judgements measuring empathy. The following table gives an overview of the measurement of the key personality traits in the survey.

Table 4: The 10 item based Big Five Inventory (BFI-10) and the empathy measurement used in the source questionnaire

Personality Traits	Items	Pole	Based on
Extraversion	I am someone who is reserved.	-	BFI 10 (Rammstedt & John, 2007), two items per dimension with five-point scale from 1 = disagree strongly to 5 = agree strongly)
	I am someone who is outgoing, sociable.	+	
Agreeableness	I am someone who is generally trusting.	+	
	I am someone who tends to find fault with others.	-	
Conscientiousness	I am someone who tends to be lazy.	-	
	I am someone who does a thorough job.	+	
Emotional lability	I am someone who is relaxed, handles stress well.	-	
	I am someone who gets nervous easily.	+	
Openness	I am someone who has few artistic interests.	-	
	I am someone who has an active imagination.	+	
Empathy	I often have tender, concerned feelings for people less fortunate than me.	+	Based on Davis (1983) (selection of 4 out of 28 items, five-point scale from 1 = does not describe me at all to 5 = describes me perfectly well
	When I see people being taken advantage of, I feel kind of protective towards them.	+	
	I am often quite touched by things that I see happen.	+	
	I would describe myself as a pretty soft-hearted person.	+	

4 Country Characteristics

In general, there are two major challenges integrating the national data sets, which should be addressed here. Firstly, some data is only partially available in some countries due to item nonresponse. The archiving team decided to avoid data imputation to fix missing data as it should be the responsibility of the researcher to choose a strategy. Secondly, data was available, but in a different format either due to translation or due to specific scales used in single countries. For these data, the original information is available either as a separate variable with a country suffix or a specific category indicating the country specific measure.[24]

This section comprises the particularities of the country data sets and primarily focuses on the issues related to harmonization, less on issues with the country data itself. Hence, there will be no discussion of missing data or similar issues. Mostly, the documentation helps to link original coding to the coding in the harmonized data set.

4.1 Austria

4.1.1 Demographics

4.1.1.1 Education

Highest educational attainment was captured with 11 categories. The ISCED coding was applied according to the experts from the national team and transferred into the 3-level educational variable.

24 Only the full data set will include these variables as the compact data set contains only the harmonized background variables, internationally comparable indicators, and scales.

Table 5: Education variable assignment for Austria

Austrian data		VIC data	
Coding	Label	Coding 3 levels	Label
1	Compulsory school	1	Low education (ISCED level 0-2)
2	Apprenticeship	2	Low education (ISCED level 0-2)
3	Vocational middle school (e.g. commercial school)	2	Medium education (ISCED level 3-4)
4	General secondary school (AHS)	2	Medium education (ISCED level 3-4)
5	Vocational secondary school (BHS, e.g. HAK, HTL)	3	High education (ISCED level 5-8)
6	Bachelor at university of applied sciences/ teacher training college	3	High education (ISCED level 5-8)
7	Bachelor at university	3	High education (ISCED level 5-8)
8	Diploma degree / Master at university of applied sciences	3	High education (ISCED level 5-8)
9	Diploma degree / Master at university	3	High education (ISCED level 5-8)
10	Postgraduate university course (based on a diploma degree, e.g. MBA)	3	High education (ISCED level 5-8)
11	Doctorate	3	High education (ISCED level 5-8)

4.1.1.2 Income

The household income was captured in 18 categories as the sum of disposable monthly income after taxes for all household members. Statistics Austria provides information on the disposable yearly household for quartiles with the first at 23,575 EUR, the second at 38,056 EUR, and the third quartile at 57,516 EUR based on EU-SILC 2019 data (Statistics Austria, 2020, p.32)[25] The monthly scale was transformed into a yearly scale by the factor twelve and quartiles were assigned to the categories as shown in Table 6.

25 Statistics Austria (2020). *Tabellenband EU-SILC 2019 und Bundesländertabellen mit Dreijahresdurchschnitt EU-SILC 2017 bis 2019. Einkommen, Armut und Lebensbedingungen.* Retrieved March 19, 2021, from http://pic.statistik.at/wcm/idc/idcplg?IdcService=GET_PDF_FILE&dDocName=123283

Table 6: Income quartile assignment for Austria

Quartile	Coding	Label
1	1	less than 450 Euro
1	2	450 to 599 Euro
1	3	600 to 749 Euro
1	4	750 to 899 Euro
1	5	900 to 1,124 Euro
1	6	1,125 to 1,349 Euro
1	7	1,350 to 1,649 Euro
1	8	1,650 to 1,949 Euro
2	9	1,950 to 2,249 Euro
2	10	2,250 to 2,699 Euro
2	11	2,700 to 3,149 Euro
3	12	3,150 to 3,599 Euro
3	13	3,600 to 4,049 Euro
3	14	4,050 to 4,499 Euro
4	15	4,500 to 5,499 Euro
4	16	5,500 to 6,499 Euro
4	17	6,500 to 7,999 Euro
4	18	8,000 Euro and more

4.1.1.3 Region

The region variable in Austria captures the nine states (Bundesländer) as the highest administrative divisions in the Federal Republic of Austria. The categories correspond to the NUTS-2 categories used by Eurostat (2020)[26].

26 Eurostat. (2020). *Statistical regions in the European Union and partner countries—NUTS and statistical regions 2021.* Retrieved May 12, 2021, from https://ec.europa.eu/eurostat/web/products-manuals-and-guidelines/-/ks-gq-20-092

9	Burgenland

4.1.2 Social and Political Orientations

4.1.2.1 Q32: Most and second-most important goal for the country

Respondents were asked to rank all four items instead of choosing the most and second-most important. We have considered the two highest scoring categories and assigned them to the most and second-most important items in the harmonized data.

4.2 Brazil

4.2.1 Demographics

4.2.1.1 Year of birth

The respondents were asked for their age not birth year.

4.2.1.2 Number of children

Number of children was surveyed with two variables. The first variable indicates if the respondent has children or not. If answered with yes, the second variable captured the uncategorized number of children using a scale from 1 to 18.

4.2.1.3 Education

Highest educational attainment was measured with 8 categories. ISCED coding was assigned according to the experts from the national team and transferred into the 3-level educational variable.

Table 8: Education variable assignment for Brazil

Brazilian data		VIC data	
Coding	Label	Coding 3 levels	Label
1	Sem escolaridade formal	1	Low education (ISCED level 0-2)
2	Ensino fundamental incompleto	1	Low education (ISCED level 0-2)
3	Ensino fundamental completo	1	Low education (ISCED level 0-2)
4	Ensino médio incompleto	2	Medium education (ISCED level 3-4)
5	Ensino médio completo	2	Medium education (ISCED level 3-4)
6	Ensino superior incompleto	2	Medium education (ISCED level 3-4)
7	Ensino superior completo	3	High education (ISCED level 5-8)
8	Pós-graduação ou acima	3	High education (ISCED level 5-8)

4.2.1.4 Income

The household income in Brazil was captured corresponding to the minimum salary coded into six categories. The income quartiles for disposable household income were calculated from the distribution of net monthly household income per capita (IBGE, 2020, p.10)[27], the median monthly household income per capita (R$1.406, ibid, p.9) and the general household characteristics of the National Household Sample Survey (PNAD, 2019)[28]. The distribution was used to calculate the first deciles from the median per capita. The deciles per capita were linear transformed into quartiles per capita, which were corrected with the average household size of three to estimate the household income. The final quartiles per household were R$2,004, R$4,162, and R$7,360. Table 9 summarizes the corresponding coding for the harmonized data.

Table 9: Income quartile assignment for Brazil

Quartile	Coding	Label
1	1	Até um salário mínimo (Até R$1,045.00)
1	2	Mais de 1 a 2 salários mínimos (Mais de R$1,045.00 a R$2,090.00)
2	3	Mais de 2 a 5 salários mínimos (Mais de R$2,090.00 a R$5,225.00)
3	4	Mais de 5 a 10 salários mínimos (Mais de R$5,225.00 a R$10,450.00)
4	5	Mais de 10 a 20 salários mínimos (Mais de R$10,450.00 a R$20,900.00)
4	6	Mais de 20 salários mínimos (Mais de R$20,900.00)

4.2.1.5 Region

The Brazilian data provided two items for capturing the region. The first item (REGIAO) distinguishes five commonly used geographical categories reflecting no political or administrative division. The second item (ESTADO) determines the 26 states and the federal district of Brazil as the main administrative division.

4.2.2 Social and Political Orientations

4.2.2.1 Q32: Most and second-most important goal for the country

Respondents were asked to rank all four items instead of choosing the most and second-most important. We have considered the two highest scoring categories and assigned them to the most and second-most important items in the harmonized data.

4.3 Chile

4.3.1 Demographics

4.3.1.1 Education

Highest educational attainment was measured with 9 categories. ISCED coding was assigned according to the experts from the national team and transferred into the 3-level educational variable.

Table 12: Education variable assignment for Chile

Chilean data		VIC data	
Coding	Label	ISCED 3 levels	Label
1	No formal education	1	Low education (ISCED level 0-2)
2	Incomplete primary school	1	Low education (ISCED level 0-2)
3	Complete primary school	1	Low education (ISCED level 0-2)
4	Incomplete secondary school: technical/vocational type	1	Low education (ISCED level 0-2)
5	Incomplete secondary: university-preparatory type	1	Low education (ISCED level 0-2)
6	Complete secondary school: technical/vocational type	2	Medium education (ISCED level 3-4)
7	Complete secondary: university-preparatory type	2	Medium education (ISCED level 3-4)
8	Some university-level education, without degree	3	High education (ISCED level 5-8)
9	University-level education, with degree	3	High education (ISCED level 5-8)

4.3.1.2 Income

Monthly household net income was coded into 8 categories and the national team provided quartiles based on official CASEN 2020 statistics (Ministerio de Desarrollo Social y Familia, 2020)[29]. According to this statistic the quartiles are defined as monthly net income per capita. To obtain the income per capita, the average of each income group was calculated as shown in table 87.

Table 13: Income labels with calculated averages for Chile

Coding	Label (monthly household net income)	Average
1	Less than CLP$ 179,000	CLP$ 89,500
2	Between CLP$ 179,001 and CLP$ 224,000	CLP$ 201,500
3	Between CLP$ 224,001 and CLP$ 291,000	CLP$ 257,500
4	Between CLP$ 291,001 and CLP$ 358,000	CLP$ 324,500
5	Between CLP$ 358,001 and CLP$ 448,000	CLP$ 403,000
6	Between CLP$ 448,001 and CLP$ 1,000,000	CLP$ 724,000
7	Between CLP$ 1,000,001 and CLP$ 2,000,000	CLP$ 1,500,000
8	More than CLP$ 2,000,000	CLP$ 2,000,000

To assign the income variable to quartiles as shown in table 88, the assumed average household income was divided by the number of people living in household permanently (Q07). E.g. a two person household with a monthly household net income between CLP$ 224,001 and CLP$ 291,000 would be assigned an average household net income of CLP$ 257,500. The average household net income of CLP$

29 Ministerio de Desarrollo Social y Familia. (2020). *CASEN 2020 statistics*. Retrieved August 15, 2021, from http://observatorio.ministeriodesarrollosocial.gob.cl/encuesta-casen-en-pandemia-2020

257,500 would be divided by 2 resulting in CLP$ 128,750, which would position the household in the second quartile.

Table 14: Income quartiles per capita for Chile

Quartile	Monthly net income per capita
1	Less than CLP$ 100,000
2	Between CLP$ 100,001 and CLP$ 200,000
3	Between CLP$ 200,001 and CLP$ 398,333
4	More than CLP $398,334

4.3.1.3 Region

The variable captures 16 categories corresponding to the major administrative division in Chile.

Table 15: Administrative division for Chile

4.4.2 Crisis experience and perception

4.4.2.1 Q14: Government and handling of Corona Crisis

The respondents were asked about three levels of government: central government, city-province government and township/village government. We have considered the central government item in harmonized data.

4.4.2.2 Q17: Country getting out of crisis

The source questionnaire asked for evaluation of the country in general. The Chinese data captured three items in relation to international status, economic development and political stability. We have defined the Chinese information as missing in the harmonized variable Q17.

4.4.3 Personality traits

4.4.3.1 Q31: Davis Empathy Items

The labels for the variable differ in wording between source questionnaire and Chinese data set labels.

Table 19: Relabelling empathy items in Chinese data

Chinese data		VIC data	
Coding	Label	Coding	Label
1	Disagree strongly	1	Does not describe me at all
5	Agree strongly	5	Describes me perfectly well

4.4.4 Social and Political orientations

4.4.4.1 Q32: Most and second-most important goal for the country

The category "Protecting freedom of speech" was not captured. Therefore the information is not available in the harmonized variable of Q32 for China.

4.4.4.2 Q33: Confidence in country

The Chinese data captured four items on confidence in government and institutions covering the city-provincial and town-village government and health sector. Chinese cases were defined as missing for the three items (Q33_1, Q33_2, Q33_3) in the harmonized data set.

Table 20: Relabelling confidence items in Chinese data

Chinese data		VIC data	
Item suffix	Label	Item suffix	Label
1	city-provincial government	1	government
2	town-village government	2	the health sector
3	city-provincial public health apparatus	3	our country's institutions as a whole
4	town-village public health apparatus		

4.4.4.3 Q34: Satisfaction

The Chinese data contained the five items on a five-point Likert scale. We have transformed the five-point scale into the ten-point scale used in the source questionnaire.

Table 21: Rescaling satisfaction items in Chinese data

8	Doctoral or equivalent	3	High education (ISCED level 5-8)

4.6.1.2 Income

Household income was coded into 16 categories based monthly time period. An item which indicates income quartiles was included in the national dataset. The quartiles 290 GEL (first), 573 GEL (second) and 1.040 GEL (third) were calculated by the experts of the national team referring to the household incomes and expenditures survey 2019[31]. Each of the quartiles fell within a selectable response category. Due to this fact, an algorithm was applied by the experts of the national team, which takes into account the level of education and level of urbanization to estimate the allocation between the upper and lower quartile within the existing categories.

31 National Statistics Office of Georgia. (2019). *Households Incomes and Expenditures Survey 2019.* Retrieved May 28, 2021 from https://www.geostat.ge/en/modules/categories/128/databases-of-2009-2016-integrated-household-survey-and-2017-households-income-and-expenditure-survey

4.7.1.2 Income

Income was measured in 16 categories on three scales referring to weekly, monthly or yearly household income. The respondent could choose amongst the scales. The reference value for the income distribution of Germany was the percentile scale of the European Social Survey (ESS, 2018, p.14)[32]. The percentiles were linear transformed into quartiles and the quartiles were assigned to the corresponding categories. The estimated quartiles were 1755 EUR (first), 2740 EUR (second), 4110 EUR (third).

32 ESS. (2018). *Appendix A2 Income, ESS9 – 2018 ed. 3.0*. Retrieved February 23, 2021, from https://www.europeansocialsurvey.org/docs/round9/survey/ESS9_appendix_a2_e03_0.pdf

4.8.1.2 Income

Income was measured in nine categories on three scales referring to weekly, monthly or yearly household income. The respondent could choose amongst the scales. For some cases, the data

contained information for multiple income variables. In case of diverging categories, the yearly data has been considered.

The reference for the distribution of household income is the Household Budget Survey (HBS) 2019 (Hellenic Statistical Authority, 2019)[34] providing absolute figures for household income in eight categories. From the data the cumulative distribution was derived and the quartiles were estimated. The applied monthly household income quartiles are 1,018.46 EUR (first), 1,559.81 EUR (second) and 2,368.19 (third).

Table 32: Income quartile assignment for Greece

Quartile	Coding	Label [weekly]	Label [monthly]	Label [yearly]
1	1	Less than 100 EUR	Less than 400 EUR	Less than 4,800 EUR

4.8.2 Crisis experience and perception

4.8.2.1 Q11: Economic experiences during the Corona crisis

The possible answers were supplemented by a third category called *Does not fit my employment status*. We have assigned the respective responses to an additional category ([Greece only]) in the harmonized data.

4.9 Hong Kong

4.9.1 Demographics

4.9.1.1 Year of birth

The respondents were asked for their age not birth year. The age was captured in eight categories. We have assigned the categories to grouped age variable accordingly.

Table 34: Age category assignment for Hong Kong

Hong Kong data		VIC data	
Coding	Label	Coding	Label
1	20-24	2	20-24 years
2	25-29	3	25-29 years
3	30-34	4	30-34 years
4	35-39	5	35-39 years
5	40-44	6	40-44 years
6	45-49	7	45-49 years
7	50-54	8	50-54 years
8	55+	9	55 years and older [Hong Kong only]

4.9.1.2 *Education*

Highest educational attainment was measured with seven categories. ISCED coding was assigned according to the experts from the national team and transferred into the 3-level educational variable.

Table 35: Education variable assignment for Hong Kong

Hong Kong data		VIC data	
Coding	Label	ISCED 3 levels	Label
1	Complete secondary school, incomplete secondary school, primary school	1	Low education (ISCED level 0-2)
2	High school	2	Medium education (ISCED level 3-4)
3	Fundamental Diploma	3	High education (ISCED level 5-8)
4	Higher Diploma	3	High education (ISCED level 5-8)
5	Bachelor degree	3	High education (ISCED level 5-8)
6	Master degree	3	High education (ISCED level 5-8)
7	Doctoral degree	3	High education (ISCED level 5-8)

4.9.1.3 *Income*

Household income was coded into 7 categories based on monthly time period. The quartiles were assigned according to the experts from the national team (CENSTATD, 2016, p.66)[36].

Table 36: Income quartile assignment for Hong Kong

Quartile	Coding	Label
1	1	Under HK$10,000
2	2	HK$10,001-HK$20,000
2	3	HK$20,001-HK$30,000
3	4	HK$30,001-HK$40,000
3	5	HK$40,001-HK$50,000
4	6	HK$50,001-HK$60,000
4	7	Over HK$60,000

4.9.1.4 *Type of living area*

Item was not captured.

4.9.1.5 *Region*

The Hong Kong data provided two region items. The first item (living area) distinguishes three main areas of Hong Kong. The second item (living district) determines the 18 districts of Hong Kong.

36 CENSTATD. (2016). *Hong Kong's 2016 Population By-census-Thematic Report: Distribution of Household Income in Hong Kong.* Retrieved March 19, 2021, from https://www.censtatd.gov.hk/hkstat/sub/sp459_tc.jsp?productCode=B1120096

4.9.2 Value orientations

4.9.2.1 Q21: Schwartz Items

The items were captured in five categories, instead of six. Categories have been recoded accordingly.

Table 39: Rescaling Schwartz items for Hong Kong

Hong Kong data		VIC data	
Coding	Label	Coding	Label
1	Very Like me	1	Very much like me
2	Like me	2	Like me
3	Somewhat like me	3	Somewhat like me
4	Not like me	5	Not like me
5	Not at all like me	6	Not at all like me

4.9.2.2 Q22: Proud to be a citizen of this country

Two questions were asked. First how proud to be citizen of Hong Kong and second how proud to be citizen of China. We have considered the first question in harmonized data.

4.9.2.3 Q29: Gender statements

The items were captured in five categories and in reversed order. To match the 4-level scale in the harmonized data set, we have recoded the middle category to 2.5.

Table 40: Rescaling gender statements for Hong Kong

Hong Kong data		VIC data	
Coding	Label	Coding	Label
1	Strongly disagree	4	Strongly disagree
2	Disagree	3	Disagree
3	Neither, nor	2.5	Neither, nor [Hong Kong only]
4	Agree	2	Agree
5	Strongly Agree	1	Strongly agree

4.9.3 Personality traits

4.9.3.1 Q31: Davis Empathy Items

The categories 2-4 were provided with additional labels.

Table 41: Relabelling empathy items for Hong Kong

Hong Kong data		VIC data	
Coding	Label	Coding	Label
1	Does not describe me at all	1	Does not describe me at all
2	Does not describe me a little	2	2

5	Describes me perfectly well	5	Describes me perfectly well

4.9.4 Social and Political Orientations

4.9.4.1 Q32: Most and second-most important goal for the country

Respondents were asked to rank all four items instead of choosing the most and second-most important. We have considered the two highest scoring categories and assigned them to the most and second-most important items in the harmonized data.

4.9.4.2 Q33: Confidence in country

The categories of the items were captured in reversed order. We have recoded the categories to match the scale in harmonized data.

Table 42: Relabelling of confidence items for Hong Kong

Hong Kong data		VIC data	
Coding	Label	Coding	Label
1	None at all	4	None at all
2	Not very much	3	Not very much
3	Quite a lot	2	Quite a lot
4	A great deal	1	A great deal

4.9.4.3 Q35: Trust in people

The categories of the items were captured in reversed order. We have recoded the categories to match the scale in harmonized data.

Table 43: Relabelling of trust items for Hong Kong

Hong Kong data		VIC data	
Coding	Label	Coding	Label
1	Do not trust at all	4	Do not trust at all
2	Do not trust very much	3	Do not trust very much
3	Trust somewhat	2	Trust somewhat
4	Trust completely	1	Trust completely

4.9.4.4 Q40: Political orientation scale

Question was asked differently:

In political matters, people talk of "the democrats" and "the pro-establishment" in Hong Kong, how would you place your views on this scale, generally speaking?

We have not considered this item in harmonized data.

Table 44: Relabelling political orientation scale for Hong Kong

Hong Kong data		VIC data	
Coding	Label	Coding	Label
1	Pure democrats	1	Left

4.10 Italy

4.10.1 Demographics

4.10.1.1 Year of birth

The respondents were asked for their age not birth year.

4.10.1.2 Education

Highest educational attainment was measured with nine categories and transferred into the 3-level educational variable according to table 41.

Table 45: Education variable assignment for Italy

Italian data		VIC data	
Coding	Label	ISCED 3 levels	Label
1	Nessuno grado di istruzione	1	Low education (ISCED level 0-2)
2	Licenza scuola primaria (elementare) non conseguita	1	Low education (ISCED level 0-2)
3	Licenza scuola primaria (elementare)	1	Low education (ISCED level 0-2)
4	Licenza scuola secondaria di primo grado (medie) non conseguita	1	Low education (ISCED level 0-2)
5	Licenza scuola secondaria di primo grado (medie)	1	Low education (ISCED level 0-2)
6	Maturità scuola secondaria di secondo grado (licei/istituti tecnici o professionali) non conseguita	1	Low education (ISCED level 0-2)
7	Maturità scuola secondaria di secondo grado (licei/istituti tecnici o professionali) non conseguita	2	Medium education (ISCED level 3-4)
8	Laurea universitaria di qualunque tipo (triennale, magistrale, dottorato) non conseguita	3	High education (ISCED level 5-8)
9	Laurea universitaria di qualunque tipo (triennale, magistrale, dottorato)	3	High education (ISCED level 5-8)

4.10.1.3 Income

Income was measured in 16 categories as yearly household net income. The reference value for the income distribution of Italy was the percentile scale of the European Social Survey (ESS, 2018, p.18)[37]. The percentiles were linear transformed into quartiles and the quartiles were assigned to the corresponding categories. The estimated quartiles were 15,750 EUR (first), 25,000 EUR (second), 39,750 EUR (third).

37 ESS. (2018). *Appendix A2 Income, ESS9 – 2018 ed. 3.0*. Retrieved February 23, 2021, from https://www.europeansocialsurvey.org/docs/round9/survey/ESS9_appendix_a2_e03_0.pdf

4.12 Kazakhstan

4.12.1 Demographics

4.12.1.1 Education

Highest educational attainment was measured with 9 categories. ISCED coding was assigned according to the experts from the national team and transferred into the 3-level educational variable.

40 Two additional items in Japan measured if people have been tested negative or positive for COVID 19. Thos two additional indicators were finally not included in the combined measurement. That is the reason why only 6 out of 8 items are illustrated in the table.

Table 52: Education variable assignment for Kazakhstan

Kazakh data		VIC data	
Coding	Label	ISCED 3 levels	Label
1	No formal education	1	Low education (ISCED level 0-2)
2	Incomplete primary school	1	Low education (ISCED level 0-2)
3	Complete primary school	1	Low education (ISCED level 0-2)
4	Incomplete secondary school	1	Low education (ISCED level 0-2)
5	Complete secondary school	2	Medium education (ISCED level 3-4)
6	Incomplete secondary	2	Medium education (ISCED level 3-4)
7	Complete secondary	3	High education (ISCED level 5-8)
8	Some university-level education, without degree	3	High education (ISCED level 5-8)
9	University-level education, with degree	3	High education (ISCED level 5-8)

4.12.1.2 Income

Household net income was coded into 16 categories based on monthly period. The quartiles were provided by the national team.

Table 53: Income quartile assignment for Kazakhstan

Quartile	Coding	Label [monthly]	Yearly disposable household net income
1	1	less than 42,500 tenge	less than 510,000 tenge
1	2	42,500 tenge to 85,000 tenge	510,000 tenge to 1,032,000 tenge
1	3	85,000 tenge to 127,500 tenge	1,032,000 tenge to 1,530,000 tenge
1	4	127,500 tenge to 170,000 tenge	1,530,000 tenge to 2,040,000 tenge
2	5	170,000 tenge to 212,500 tenge	2,040,000 tenge to 2,550,000 tenge
2	6	212,500 tenge to 255,000 tenge	2,550,000 tenge to 3,060,000 tenge
2	7	255,000 tenge to 297,500 tenge	3,060,000 tenge to 3,564,000 tenge
2	8	297,500 tenge to 340,000 tenge	3,564,000 tenge to 4,080,000 tenge
3	9	340,000 tenge to 382,500 tenge	4,080,000 tenge to 4,590,000 tenge
3	10	382,500 tenge to 425,000 tenge	4,590,000 tenge to 5,100,000 tenge
3	11	425,000 tenge to 467,500 tenge	5,100,000 tenge to 5,610,000 tenge
4	12	467,500 tenge to 510,000 tenge	5,610,000 tenge to 6,120,000 tenge
4	13	510,000 tenge to 552,500 tenge	6,120,000 tenge to 6,630,000 tenge
4	14	552,500 tenge to 595,000 tenge	6,630,000 tenge to 7,140,000 tenge
4	15	595,000 tenge to 637,500 tenge	7,140,000 tenge to 7,650,000 tenge
4	16	637,500 tenge and more	7,650,000 tenge and more

4.12.1.3 Type of living area

The living area was captured in six categories with different labels. We have recoded *Capital* and *Cities of republican significance* as *A big city*. *Regional center, District center* and *another city, town* have been assigned to the category *A town or a small city* and the category *Village* was recoded as *A country village*.

Table 54: Relabeling living area for Kazakhstan

Kazakh data		VIC data	
Coding	Label	Coding	Label
1	Capital	1	A big city
2	Cities of republican significance	1	A big city
3	Regional center	3	A town or a small city
4	District center	3	A town or a small city
5	Another city, town	3	A town or a small city
6	Village	4	A country village / A farm or home in the countryside

4.12.1.4 Region

The region variable has 17 categories differentiating 14 regions and three major cities (cities of republican significance) of Kazakhstan. These 17 categories correspond to the highest administrative division in Kazakhstan.

Table 55: Administrative division for Kazakhstan

Coding	Label
1	Nur-Sultan
2	Almaty
3	Shymkent
4	Akmola region
5	Aktobe region
6	Almaty region
7	Atyrau region
8	East Kazakhstan region
9	Zhambyl region
10	West Kazakhstan region
11	Karaganda region
12	Kostanay region
13	Kyzylorda region
14	Mangistau region
15	Pavlodar region
16	North Kazakhstan region
17	Turkestan region

4.12.2 Crisis experience and perception

4.12.2.1 Q11: Economic experiences

The wording of Q11.1 was changed from *I lost my job* to *I lost my job or had to go on unpaid leave*. We have fully integrated the variable in the harmonized data.

4.12.3 Social and Political orientations

4.12.3.1 Q40: Political orientation scale

Item was not captured.

4.13 Maldives

4.13.1 Demographics

4.13.1.1 Education

Highest educational attainment was measured with 8 categories and transferred into the 3-level educational variable according to table 52.

Table 56: Education variable assignment for the Maldives

Maldivian data		VIC data	
Coding	Label	ISCED 3 levels	Label
1	No formal education	1	Low education (ISCED level 0-2)
2	Incomplete primary school	1	Low education (ISCED level 0-2)
3	Complete primary school	1	Low education (ISCED level 0-2)
4	Incomplete secondary school: technical/vocational type	1	Low education (ISCED level 0-2)
5	Complete secondary school: technical/vocational type	1	Low education (ISCED level 0-2)
6	Incomplete secondary: university-preparatory type	1	Low education (ISCED level 0-2)
7	Complete secondary: university-preparatory type	2	Medium education (ISCED level 3-4)
8	University-level education, with degree	3	High education (ISCED level 5-8)

4.13.1.2 Income

Household net income was coded into 16 categories. The Household Income and Expenditure Survey 2019 (National Bureau of Statistics, 2019)[41] is the reference for the household income distribution. The survey provided percentiles on the average monthly per capita income. The distribution was used to estimate the relative position of the first and third quartile to the median. Afterwards, these relative positions were applied to the median monthly income per household resulting in estimates of 15,084.29 MVR for the first, 23,500 MVR for the second and 33,617.7 MVR for the third quartile.

41 National Bureau of Statistics. (2019). Household Income and Expenditure Surveys 2019. Retrieved February 24, 2021, from http://statisticsmaldives.gov.mv/nbs/wp-content/uploads/2020/08/Income-Indicator-HIES2019.xlsx

2	10	MVR 22,001-26,500
3	11	MVR 26,501-31,000
3	12	MVR 31,001-35,500
4	13	MVR 35,501-40,000
4	14	MVR 40,001-44,500
4	15	MVR 44,501-54,000
4	16	More than MVR 54,000

4.13.1.3 Number of people living in household

The data had no labels and considered the absolute number of people living in household. The highest number of people living in household was 26. As mentioned in chapter 3.1 we have limited the maximum number of household members to six and more in harmonized data.

4.13.1.4 Region

The region variable has 23 categories regions capturing 17 administrative atolls and major cities. Due to data protection reasons, the harmonized data doesn't contain this information.

Table 58: Administrative division for the Maldives

Coding	Label

21	Addu City
22	Hulhumale'
23	Villimale'

4.13.2 Value orientations

4.13.2.1 Q26: Religious value

The item consists of only two categories. Third category 'An Atheist' is not included.

4.13.2.2 Q27: Attendant of religious services

The categories were rephrased to meet local culture and religious routines. We have aligned the categories to match the scale in the harmonized data accordingly.

Table 59: Relabelling religious service attendance for the Maldives

Maldivian data		VIC data	
Coding	Label	Coding	Label
1	More than once a day	1	More than once a week
2	More than once a week	1	More than once a week
3	Once a week	2	Once a week
4	Only on special holidays	4	Only on special holidays
5	Once or twice a year	5	Once a year
6	Less than once or twice a year	6	Less often
7	Never	7	Never, practically never

4.13.2.3 Q28: Justifiability of homosexuality, abortion, and divorce

The question on homosexuality was not captured.

4.14 Poland

4.14.1 Demographics

4.14.1.1 Year of birth

The respondents were asked for their age not birth year.

4.14.1.2 Education

Highest educational attainment was measured with 12 categories. ISCED coding was assigned according to the experts from the national team and transferred into the 3-level educational variable.

Table 60: Education variable assignment for Poland

Polish data		VIC data	
Coding	Label	ISCED 3 levels	Label
1	basic incomplete	1	Low education (ISCED level 0-2)
2	basic	1	Low education (ISCED level 0-2)
3	middle schools	1	Low education (ISCED level 0-2)
4	core professional	1	Low education (ISCED level 0-2)
5	incomplete secondary education (completed secondary school without graduation)	1	Low education (ISCED level 0-2)
6	medium vocational	2	Medium education (ISCED level 3-4)
7	overall averages	2	Medium education (ISCED level 3-4)
8	post-secondary/post-secondary	2	Medium education (ISCED level 3-4)
9	incomplete higher education (completed university studies without a diploma)	2	Medium education (ISCED level 3-4)
10	higher bachelor`s degree or equivalent	3	High education (ISCED level 5-8)
11	higher masters or equivalent	3	High education (ISCED level 5-8)
12	Doctorate / Postgraduate Studies	3	High education (ISCED level 5-8)

4.14.1.3 Income

Income was measured in 8 categories as monthly household net income. The reference value for the income distribution of Poland was the percentile scale of the European Social Survey (ESS, 2018, p.25)[42]. The percentiles were linear transformed into quartiles and the quartiles were assigned to the corresponding categories. The estimated quartiles were 1755 EUR (first), 2740 EUR (second), 4110 EUR (third).

Table 61: Income quartile assignment for Poland

Quartile	Coding	Label
1	1	Under 2,000 PLN
2	2	From PLN 2,000 to PLN 3,999
3	3	From PLN 4,000 to PLN 5,999
4	4	From PLN 6,000 to PLN 7,999
4	5	From PLN 8,000 to PLN 9,999
4	6	from PLN 10,000 to PLN 14,999
4	7	from PLN 15,000 to PLN 19,999
4	8	PLN 20,000 and more

4.14.1.4 Type of living area

The variable was captured by referencing the inhabitants of the living area in seven categories. We have recoded The *village* category to *A country village*. The categories *city to 20,000 inhabitants*, *20 - 49 thousand inhabitants* and *50 - 99 thousand inhabitants* were assigned to *A town or small village*. All categories above 100,000 inhabitants are coded as *A big city*.

Table 62: Relabelling living area for Poland

Polish data		VIC data	
Coding	Label	Coding	Label
1	village	4	A country village
2	city to 20,000 inhabitants	3	A town or a small city

1	6	2,000,000 to 2,490,000 won
2	7	2,500,000 to 2,990,000 won
2	8	3,000,000 to 3,490,000 won
2	9	3,500,000 to 3,990,000 won
2	10	4,000,000 to 4,490,000 won
3	11	4,500,000 to 4,990,000 won
3	12	5,000,000 to 5,490,000 won
3	13	5,500,000 to 5,990,000 won
3	14	6,000,000 to 6,490,000 won
3	15	6,500,000 to 6,990,000 won
4	16	7,000,000 to 7,490,000 won
4	17	7,500,000 to 7,990,000 won
4	18	8,000,000 to 8,490,000 won
4	19	8,500,000 to 8,990,000 won
4	20	9,000,000 to 9,490,000 won
4	21	9,500,000 to 9,990,000 won
4	22	More than 10,000,000 won

4.17.1.3 Region

The variable captures 17 categories corresponding to the major administrative division in South Korea including eight provinces, six metropolitan cities, one special self-governing province (Jeju), one special city (Seoul), and on special self-governing city (Sejong).

Table 77: Administrative division for South Korea (Sample 2)

Coding	Label
1	Seoul
2	Busan
3	Daegu
4	Incheon
5	Gwangju
6	Daejeon
7	Ulsan
8	Sejong
9	Gyeonggi
10	Gangwon
11	Chungbuk
12	Chungnam
13	Jeonbuk
14	Jeonnam
15	Gyeongbuk
16	Gyeongnam
17	Jeju

4.17.2 Value orientations

4.17.2.1 Q27: Attendant of religious services

The labels of the first two categories differ from the source questionnaire. We have swapped the categories to match harmonized data.

Table 78: Relabelling religious service attendance for South Korea (Sample 2)

Korean data		VIC data	
Coding	Label	Coding	Label
1	once a week	2	Once a week
2	several times a week	1	More than once a week
3	once a month	3	Once a month
4	only on specific holidays	4	Only on special holidays
5	once a year	5	Once a year
6	less often	6	Less often
7	never	7	Never, practically never

4.17.3 Social and Political orientations

4.17.3.1 Q38: Ethnic diversity

The labels differ in wording, which could imply a different meaning. Nevertheless, we have included the data in the harmonized dataset.

Table 79: Relabelling ethnic diversity item for South Korea (Sample 2)

Korean data		VIC data	
Coding	Label	Coding	Label
1	Ethnic diversity erodes social cohesion	1	Ethnic diversity erodes social cohesion
10	Ethnic diversity enriches social cohesion	10	Ethnic diversity enriches social life

4.17.3.2 Q39: Political priorities

The labels differ in wording, which could imply a different meaning. Nevertheless, we have included the data in the harmonized dataset.

Table 80: Relabelling political priorities for South Korea (Sample 2)

Korean data		VIC data	
Coding	Label	Coding	Label
1	Solving our own problems our own way	1	Solving our own problems by ourselves
10	Solving global problems cooperatively	10	Solving global problems in cooperation

4.18 Sweden

4.18.1.1 Marital status

The variable had only three categories. We have defined the third category as separate category in harmonized data.

Table 81: Relabelling marital status for Sweden

Swedish data		VIC data	
Coding	Label	Coding	Label
1	Married	1	Married
2	Living together as married (cohabitation)	2	Living together as married
3	Other (divorced, separated, widowed, celibate)	7	Other (divorced, separated, widowed, celibate) [Sweden only]

4.18.1.2 Number of children

The data included the number of children living at home and in which year children were born. We have defined all Swedish cases as missing for the number of children.

4.18.1.3 Education

Highest educational attainment was measured with 4 categories. ISCED coding was assigned according to the experts from the national team and transferred into the 3-level educational variable.

Table 82: Education variable assignment for Sweden

Swedish data		VIC data	
Coding	Label	ISCED 3 levels	Label
1	1 Grundskola/Motsvarande	1	Low education (ISCED level 0-2)
2	2 Gymnasium/Motsvarande	2	Medium education (ISCED level 3-4)
3	3 Universitet/Högskola	3	High education (ISCED level 5-8)
4	4 Ingen avslutad	1	Low education (ISCED level 0-2)

4.18.1.4 Income

Household net income was coded into 9 categories and the national team provided quartiles.

Table 83: Income quartile assignment for Sweden

Quartile	Coding	Label surveyed [household gross income]	Label calculated [household net income]
1	1	Under 200.000 kr/år	Under 16 580 Euro
1	2	200.000 - 299. 999 kr/år	Between 16 580 & 24 026 Euro
2	3	300.000 - 399. 999 kr/år	Between 24 026 & 31 363 Euro
2	4	400.000 - 499. 999 kr/år	Between 31 363 & 38 374 Euro
3	5	500.000 - 599. 999 kr/år	Between 38 373 & 44 128 Euro
3	6	600.000 - 699. 999 kr/år	Between 44 127 & 48 978 Euro
3	7	700.000 - 799. 999 kr/år	Between 48 978 & 53 686 Euro
3	8	800.000 - 899. 999 kr/år	Between 53 685 & 58 396 Euro
4	9	900.000 kr/år eller mer	More than 58 396 Euro

4.18.1.5 Number of people living in household

The variable contained 6 categories with the last category indicating *6 or more people.* We have assigned the last category to the category of 6 or more household members in harmonized data.

4.18.1.6 Type of living area

The variable was measured in nine categories. We have recoded the categories to match harmonized data accordingly.

Table 84: Relabelling living area for Sweden

Swedish data		VIC Data	
Coding	Label	Coding	Label
1	Major city	1	A big city
2	Commuting municipality near major city	2	The suburbs or outskirts of a big city
3	Larger city	3	A town or a small city
4	Commuting municipality near larger city	3	A town or a small city
5	Long commuting municipality near larger city	3	A town or a small city
6	Smaller town	4	A country village / A farm or home in the countryside
7	Commuting municipality near smaller town	4	A country village / A farm or home in the countryside
8	Rural municipality, not near larger city	4	A country village / A farm or home in the countryside
9	Rural municipality with hospitality industry	4	A country village / A farm or home in the countryside

4.18.1.7 Region

Sweden provided two different regional variables. *Q08_2_SWE City* has four categories referring to the three major urban areas and the rest of Sweden.

Table 85: City regions for Sweden

Coding	Label
1	Larger Stockholm
2	Larger Gothenburg
3	Larger Malmo
4	Other part of Sweden

Q09_SWE region has four categories referring to larger regions of Sweden.

Table 86: Regions for Sweden

Coding	Label
1	Götaland
2	Svealand
3	Södra Norrland
4	Norra Norrland

4.18.2 Value orientations

4.18.2.1 Q22: Proud to be a citizen of this country

The question wording is *How proud are you to be Swedish?* If the respondent is born outside of Sweden, a second item captures how proud the respondent is related to the country of origin.

4.18.3 Personality traits

4.18.3.1 Q30: Big Five

The scale was captured with 15 items instead of 10 items. We have not included these items in harmonized data.

Table 87: Big Five Inventory with 15 items for Sweden

Item	Disagree strongly	Disagree	Neither, nor	Agree	Agree strongly
Q76 I am a quiet person.	1	2	3	4	5
Q77 I am a compassionate person with a good heart.	1	2	3	4	5
Q78 I am usually disorganized.	1	2	3	4	5
Q79 Usually things worry me a lot.	1	2	3	4	5
Q80 I appreciate art, music or literature.	1	2	3	4	5
Q81 I am dominant and want to control others.	1	2	3	4	5
Q82 I am sometimes rude to others.	1	2	3	4	5
Q83 I have sometimes difficulties starting tasks.	1	2	3	4	5
Q84 I am usually depressed and down.	1	2	3	4	5
Q85 I am not interested in abstract ideas.	1	2	3	4	5
Q86 I am full of energy.	1	2	3	4	5
Q87 In general I think well of people.	1	2	3	4	5
Q88 I am a reliable person that can be trusted.	1	2	3	4	5
Q89 I am emotionally stable and do not get upset.	1	2	3	4	5
Q90 I am creative and come up with new ideas.	1	2	3	4	5

4.18.4 Social and Political orientations

4.18.4.1 Q40: Political orientation scale

Item was not captured.

4.19 United Kingdom

4.19.1 Demographics

4.19.1.1 Income

Income was measured in 16 categories on three scales referring to weekly, monthly or yearly household income. The respondent could choose amongst the scales. The reference value for the income distribution of United Kingdom was the percentile scale of the European Social Survey (ESS, 2018, p.35)[46]. The percentiles were linear transformed into quartiles and the quartiles were assigned to the corresponding categories. The estimated quartiles were weekly 399 EUR (first), 646 EUR (second), 1,022 EUR (third).

46 ESS. (2018). *Appendix A2 Income, ESS9 – 2018 ed. 3.0*. Retrieved February 23, 2021, from https://www.europeansocialsurvey.org/docs/round9/survey/ESS9_appendix_a2_e03_0.pdf

Table 88: Income quartile assignment for the UK

Quartile	Coding	Weekly	Monthly	Yearly
1	1	Less than 100 Euro	Less than 450 Euro	Less than 5,400 Euro
1	2	Between 100 and 129 Euro	Between 450 and 599 Euro	Between 5,400 and 7,199 Euro
1	3	Between 130 and 169 Euro	Between 600 and 749 Euro	Between 7,200 and 8,999 Euro
1	4	Between 170 and 209 Euro	Between 750 and 899 Euro	Between 9,000 and 10,799 Euro
1	5	Between 210 and 259 Euro	Between 900 and 1,124 Euro	Between 10,800 and 13,499 Euro
1	6	Between 260 and 309 Euro	Between 1,125 and 1,349 Euro	Between 13,500 and 16,199 Euro
1	7	Between 310 and 379 Euro	Between 1,350 and 1,649 Euro	Between 16,200 and 19,799 Euro
2	8	Between 380 and 449 Euro	Between 1,650 and 1,949 Euro	Between 19,800 and 23,399 Euro
2	9	Between 450 and 524 Euro	Between 1,950 and 2,249 Euro	Between 23,400 and 26,999 Euro
2	10	Between 525 and 624 Euro	Between 2,250 and 2,699 Euro	Between 27,000 and 32,399 Euro
3	11	Between 625 and 724 Euro	Between 2,700 and 3,149 Euro	Between 32,400 and 37,799 Euro
3	12	Between 725 and 824 Euro	Between 3,150 and 3,599 Euro	Between 37,800 and 43,199 Euro
3	13	Between 825 and 924 Euro	Between 3,600 and 4,049 Euro	Between 43,200 and 48,599 Euro
3	14	Between 925 and 1,024 Euro	Between 4,050 and 4,499 Euro	Between 48,600 and 53,999 Euro
4	15	Between 1,025 and 1,249 Euro	Between 4,500 and 5,499 Euro	Between 54,000 and 65,999 Euro
4	16	1,250 Euro or more per week	5,500 Euro or more per month	66,000 Euro or more per year

4.19.1.2 Region

The variable captures the 12 regions of United Kingdom corresponding to the NUTS1 levels of Eurostat.[47] Deviating from NUTS1 level, London is divided into inner and outer London.

47 Eurostat. (2020). *Statistical regions in the European Union and partner countries—NUTS and statistical regions 2021.* Retrieved May 12, 2021, from https://ec.europa.eu/eurostat/web/products-manuals-and-guidelines/-/ks-gq-20-092
