1. Introduction

This report accompanies the study data "Post-election survey data on citizen reaction to coalition compromises in Austria 2019, Netherlands 2021 and Spain 2019" (doi: 10.11587/W3AN2V) conducted by the University of Vienna within the context of the Hertha Firnberg project funded by the Austrian Science Fund (FWF) "The consequences of coalition government compromise on public opinion" led by Carolina Plescia at the University of Vienna (project grant number T997 – G27; for further information about the project see here). The data focus on the general election held in Austria in September 2019, in the Netherlands in March 2021 and in Spain in April and November 2019.

1.1 How to cite this data

Data users are kindly asked to acknowledge the data and this accompanying release document (documentation) thought citation. Please refer to AUSSDA – The Austrian Social Science Data Archive (www.data.aussda.at) for recommendations on how to cite the data.

1.2 Changes in editions

No changes in editions.

2. Conditions of use

2.1 Restrictions

The data are available for scientific use without restrictions.

2.2 Confidentiality

The Principal Investigator, the Austrian Science Fund and the University of Vienna neither take responsibility for the use of the data or interpretations and inferences based on their use, nor do they accept liability for indirect, consequential, or incidental damages or losses arising from use of the data.

2.3 Deposit requirement

In order to facilitate exchange within the scientific community and to provide funding agencies with essential information about the use of archival resources, users of this dataset are asked to notify the principal investigator of publications based on its data.

4. Study design

4.1 Sampling

The study surveyed eligeable to vote citizens with access to the internet. Respondents were sampled from pre-existing online panels. To participate in the study, respondents had to be at least 18 years old (16 in the case of Austria) and eligible to vote in the most recent national election. National quota sampling was employed based upon the following key demographics: age, gender, education and region. National target quotas were based upon Eurostat 2017 data. Hence, the quotas were structured to closely represent the populations of each EU member state in which the survey way fielded. We present a comparison of the target populations and our samples across both waves according to the core characteristics below.

4.2 Fieldwork

The fieldwork was conducted within the following periods (see Table 4). Table 4 also provides the date and time of fieldwork as well as statistics on the average length of interviews.

TABLE 4. FIELDWORK AND INTERVIEW LENGTH

Country	**Fieldwork period**	**Interview length (in min.)**	
	Date	[mean]	median
Austria[1]	30.09.2019-08.10.2019	11.3	8.9
Netherlands	18.03.2021-28.03.2021	14.9	8.4
Spain April 2019	29.04.2019-02.05.2019	10.6	9.1
Spain November 2019	11.11.2019-19.11.2019	7.6	6.4

4.3 Participation

Respondents were invited and incentivized to participate in each country. The survey companies made all the decisions about the compensation.

[1] Contains missing values.

TABLE 5. SPECIFIED INFORMATION ON INVITATIONS AND RESPONSE RATES

	Austria	**Netherlands**	**Spain April 2019**	**Spain November 2019**
Number of invitations sent n=	5562	missing	2082	2918
Number of survey starts (before exclusions) n=		missing	1162	1286
Response rate (invitations/n)	21.6%[a]	missing	55.8%	44.1%
Respondents excluded on the basis of non-eligibility (e.g., voting age) n=		missing	1	74+124[b]
Respondents excluded for trap questions/speeders etc n=		40	20	18
Dropouts n=		missing	61	41
Respondents excluded for quota full n=	204	missing	71	29
Total number of respondents (post-exclusions, i.e. survey completes) n=	1000	2003	1009	1000

[a] Calculated on the basis of total number of respondents since number of survey starts not available. [b] The survey company attempted to recontact as many participants as possible from wave 1 (i.e. April 2019) so 124 respondents were excluded because they did not participate in wave 1.

5. Data cleaning

5.1 Quality assurance and exclude respondents

Some respondents were excluded due to quality control issues. These are: 1.) Respondents were excluded for aberrant response patterns (straight-lining) and for timing out (10 minutes+ inactive during the survey) as identified by the survey companies responsible for data collection. The number of exclusions made on this basis is reported in Table 5.

5.2 Variable format

For most variables missing values were coded as follows:

-66 other party

-77 I cast an invalid or blank ballot

-88 not seen this question

-97 not applicable

-98 don't know (including I do not know this party)

-99 refused (including prefer not to answer and prefer not to say)

6. Weighting of data

No weights provided.
