Qualiservice data sharing

Cooperative Processing of Qualitative Research Data

Dr. Sebastian Matthias Schlerka

Theresa Manderscheid

Universität Bremen

Presentation held at the HeFDI Data Week 2024
07.06.2024

socium Forschungszentrum Ungleichheit und Sozialpolitik

Structure of the presentation

1. Research Data Centre Qualiservice data sharing at the University of Bremen
2. Sharing and re-using qualitative research data
3. Practical realisation: Milestones of data processing
4. Anonymisation and pseudonymisation
5. Findability of research data: Meta data and study report
6. Secondary use of qualitative data: Course of action and possibilities

Qualiservice data sharing - Research Data Centre (RDC)

The only research data centre (RDC) in Germany that processes and curates social science qualitative research data from various disciplines regardless of topic, archives them (long-term) and makes them available for scientific re-use.

Data stock: → Focus on „sensitive“ (e.g., personal) data and the related ethical, legal, professional, and technical requirements
→ Entire range of qualitative research data and materials, for example interview transcripts, observation protocols, field diaries, audio-visual media, photographies

Disciplines: i.a., sociology, ethnology, political science, area studies, media studies and communication science, health science, psychology and interdisciplinary points of contact with natural sciences, such as research on climate, environment and bio-diversity

Qualiservice data sharing

Sharing and re-using qualitative research data

Challenges in “Data sharing”

Important aspects of qualitative social research

- Openness of the research process
- Diversity of methods (Data generation, processing, analysis)
- Diversity of data types (text, audio, video, image, etc.), relations between data
- Low amount of standardisation of research data combined with a vast richness of information
- Personal and/or sensitive data; close relationships of trust while „in the field“
- Often, an encompassing knowledge of context is necessary for the analysis and/or interpretation (contexts of institutional, conceptual, methodological, or situative kind)

→ Challenges: Data protection and informed consent; anonymisation or pseudonymisation, documentation and contextualisation, findability and „data fit“

Qualiservice solutions for “Data sharing”

- Supporting researchers:
  - Scientific consultation and support from grant application until the end of the project
  - Project-specific data management
  - Form sheets, guidelines, manuals, the anonymisation tool QualiAnon, user workshops
- Making data re-usable and findable
  - Curation of data and metadata, further development of metadata
  - Study-specific contextualisation
  - Publication of metadata and study report, international visibility of research
- Data protection and security
  - Comprehensive concept of data protection and a secure, reliable and sustainable IT infrastructure
  - Study-specific anonymisation and usage agreements
  - Curation in a safe center, controlled access to data, on-site guest workstation

Practical realisation:

Milestones of data processing

Creating the conditions for data sharing

- Think early on about the research data that is to be generated (protection of participants and data, potentials for secondary use, kinds of data, accessibility and access) ← Data sharing as a part of (the plan for) data management
- Contact Qualiservice *before* the application for a research grant
- Plan – and apply for! – resources for data processing and curation in your project
- Of central importance: Get an informed consent from your participants → If necessary, anonymise / pseudonymise the data / document the project / contextualise the data

Sharing data – Step by step

Step 1 – First contact and consultation

- Contact us
- Consultation for the planning of resources
- Preparation of the data transfer (in person / workshops)
  → Contextualisation: study report, project spreadsheet

Step 2 – Data-transfer agreement and data transfer

- Creation of the data-transfer agreement (contains, e.g., precautionary measures or individual conditions for access)
- Processing / curation of the data by Qualiservice
- Proofreading by the persons providing the data

Step 3 – Access to the data

- Publication of metadata and study report
- Data access via QS-Search and PANGAEA catalog

https://www.qualiservice.org/en/data-services/sharing-data.html

FORSCHEN, LEHREN, LERNEN 459

Heuer, Jan-Ocko, Betina Hollstein & Kati Mozygemba (2021): „Data Sharing“ mit Qualiservice. In: Soziologie – Forum der Deutschen Gesellschaft für Soziologie 50 (4), S. 459-472.

»Data Sharing« mit Qualiservice

Data Sharing in der qualitativen Sozialforschung: Potentiale und Herausforderungen

Mozygemba, K. & Kretzer, S. (2020): Datenvielfalt im Data Sharing - eine kooperative Aufgabe von Forschenden und Forschungsdatenzentrum (preprint), Qualiservice Working Papers 3-2020, Bremen, doi: http://dx.doi.org/10.26092/elib/345

Informed Consent

- GDPR (2018): Prohibition with reservation of permission
- Informed consent to the processing of “special categories” of personal data according to Art. 9 and Art. 10 GDPR:
  - Personal data revealing racial or ethnic origin, political opinions, religious or philosophical beliefs, or trade union membership
  - genetic data, biometric data, data concerning health or data concerning a natural person‘s sex life or sexual orientation; data relating to criminal convictions and offences https://www.gdpr-info.eu
- Informed consent to the processing of personal (research) data in the context of the research project producing these data / material (until the end of the project)
- Informed consent to archiving (long term) and secondary use of personal research data

Informed Consent

Legally examined templates for primary research, archiving, passing on to data sharing (German/English)

Susanne Kretzer, Kati Mozygemba, Jan-Ocko Heuer, Elisabeth Huber

doi: http://dx.doi.org/10.26092/elib/1070

Video tutorial on legal questions concerning data sharing

https://www.youtube.com/watch?v=vC8ucG9MJSw

Data-transfer agreement

- Specification of conditions for secondary use
  - Embargo periods
  - Notification in case of requests for secondary use
- Definition of protection for data and context materials
  - Campus use file (CUF)
  - Scientific use file (SUF)
  - Only on-site access
- Possibility to exclude specific material from secondary use
  - Interviews with specifically identifiable persons
  - Other particularly sensitive material

Data transfer

- Only after signing the data-transfer agreement
- Provision of a secure upload link
  - Data gets directly transferred into our safe center
  - After the successful upload, the data is transferred to computers without connection to the internet
- Check of completeness and integrity of your data
  - Comparison of submitted files and previously provided spreadsheets
- After the successful upload, the curation process begins

Curation of data:

Anonymisation and pseudonymisation

Anonymisation / Pseudonymisation

The Qualiservice concept of “flexible anonymisation”

- Sensitive personal data are replaced with information of relevance to the social sciences and varying degrees of abstraction
- Replacements can be re-opened on varying levels of abstraction
- In this way, more specific information in ‘less’ abstracted data sets can be provided for specific research questions (on-site)
- Partial standardisation possible by using lists

Kati Mozygemba & Betina Hollstein

In Zusammenarbeit mit: Jan-Ocko Heuer, Elisabeth Huber, Hai Ha Nguyen

Anonymisierung und Pseudonymisierung qualitativer textbasierter Forschungsdaten – Eine Handreichung

University of Bremen – Qualiservice Working Papers

QS-WP-5-2023

Mozygemba, Kati & Betina Hollstein (2023): **Anonymisierung und Pseudonymisierung qualitativer textbasierter Forschungsdaten - eine Handreichung**. Qualiservice Working Papers 5-2023, Bremen, https://doi.org/10.26092/elib/2525

Examples

Category	Sub-category	Example	Replacement			
		Original	Level 1	Level 2	Level 3	Level 4
Locations	Country, region, state, city, street, etc.	Berlin	Town	Town 1, city in Germany	Town 1, big city in Germany	Town 1, big city in Germany with a population of more than 1 million
Professional activities	Education, occupations, professional acitivities	Geriatric nurse	Occupation of the interviewee	Occupation of the interviewee, Service and Sales Workers, ISCO-08: Code 05	Occupation of the interviewee, Personal Care Workers, ISCO-08: Code 53	Occupation of the interviewee, Personal Care Workers in Health Services, ISCO-08: Code 532
Individual characteristics	Illnesses, awards, accidents, etc.	Severe heart attack	Illness	Illness 1	Severe illness 1	Severe illness of the circulatory system

Anonymisation / Pseudonymisation

In practice

- considering and weighing up different aspects of (personal) data protection (u. a. data privacy, information and informed consent, data security, risk of re-identification)
- processual and not standardised approach to anonymisation
- decicions based on necessity of levels of study and cases, context-sensitive: What is relevant information for social science research? (abstraction levels)
  - thinking like a qualitative researcher also in anonymisation
  - Life worlds of people/phenomena should remain in the data

QualiAnon - the Qualiservice anonymisation tool

- Mark and replace sensitive information according to varying degrees of abstraction
- Study- and case-related replacements
- Integration of lists
- Exports of varying degrees of sensitivity
- Sharing and further use of replacement categories
- Separated saving of documents
- User in control
- Open source

Abstract: DE: Der Datensatz enthält 19 Beobachtungen von Ärzten und Ärztinnen, die eine_n Simulationspatienten/in (SP) behandeln, der bzw. die Herzinsuffizenz simuliert, ein weit verbreitetes kardiologisches Syndrom. Die Arzt-Patient-Interaktionen fanden 2019 am Peking Union Medical College-Hospital (PUMCH) in Peking (VR China) statt. Die teilnehmenden Ärzte und Ärztinnen waren in Bezug auf Berufserfahrung, Spezialisierungsgrad, Fachsprache, Alter, Geschlecht und Migrationserfahrung divers. Diese Merkmale liegen als Fragebogendaten vor. Die Studie verwendete zwei Skripte für die SPs: Ein Fall von systolischer Herzinsuffizienz – für die eine Standardbehandlung verfügbar ist – wurde von 60-jährigen männlichen SPs dargestellt; ein Fall von diastolischer Herzinsuffizienz – für die die Behandlungsrichtlinien weniger klar sind – wurde von 80-jährigen weiblichen SPs gespielt. Der Kern des Datensatzes besteht aus Videos, Transkriptionen in Englisch und Mandarin sowie Teilübersetzungen ins Englische für Fälle in den Sprachen Mandarin. Einige Sequenzen wurden in ELAN übertragen. Der Datensatz ermöglicht die Untersuchung von beruflichem Wissen und Praxis in einer interkulturellen und transnational vergleichenden Perspektive. Die Daten sind für die angewandte Forschung in der Medizindidaktik und für die wissenssoziologische Grundlagenforschung und Gesprächsanalyse relevant. Medizinsoziologie, Wissenschaftsforschung, Social Studies of Science and Medicine, Professionssoziologie und Migrationsforschung sind Teildisziplinen, die von einer Weiterverwendung der Daten profitieren könnten.

EN: The data set contains 19 observations of physicians during a first encounter with a patient actor simulating a prevalent cardiac disease, heart failure. The doctor-patient-interaction took place 2019 at Beijing Union Medical College-Hospital (PUMCH) in Beijing (PRChina). Participating physicians were diverse in terms of professional experience, degree of specialization, professional language, age, gender and migration experience. These characteristics are available as questionnaire data. The study employed two scrips for simulated patients: a case of systolic heart failure – for which a standard treatment is available – was enacted by 60-year-old male SPs; a case of diastolic heart failure – for which treatment guidelines are less clear – was enacted by 80-year-old female SPs. The core of the data set consists of videos, transcripts in English and Mandarin as well as partial translations to English for the Mandarin language cases. Some sequences were transferred to ELAN. The data set enables the study of professional knowledge and practise in an intercultural and transnationally comparative perspective. It is relevant for applied research in medical education and for foundational research in the sociology of knowledge and conversation analysis. The sociology of medicine, social studies of science and medicine, sociology of professions, and migration research are sub-disciplines that might profit from reusing the data.

Autor/Autorin:	Habermas, Tilmann
Herausgeber:	Forschungsdatenzentrum Qualiservice
Zusammenfassung:	The MainLife Study is a cohort-sequential study of brief (15-20 minutes) life narratives of a total of 172 participants, covering ages 8 to 80. The four younger cohorts were 8, 12, 16, and 20 years old in 2003, and the two older cohorts, beginning in 2007, were initially on average 40 and 65 years old. Data collection took place every 4 years (2003, 2007, 2011, 2015, 2019). In 2003, two life narra...

Using data– Step by step

Qualiservice data sharing

Step 1 – Initial contact and consultation

- View the list of available studies – e.g., QSearch results
- Clarification of usage interest → Research vs. Teaching
  Scientific Use File vs. Campus Use File: different degrees of abstraction
- Consultation on the selection of data

Step 2 – Sign the usage agreement

Step 3 – Provision of data

- Secure download of the data set for external use ***or***
- Access to strictly protected data in our on-site safe room (using the guest workstation)

https://www.qualiservice.org/de/daten-nutzen.html

Possible uses

… in research	… in teaching
• Secondary analyses (new research questions, new methods, combinations of data) • Longitudinal studies, temporal comparisons • Idea generator and preparation of projects • Interdisciplinary research • Research on research	• Methodological training • “Knowledge packages” for teaching (data & context material on specific topics) • Sensitisation regarding research ethics, data protection, and documentation of research • Data basis for qualification theses
Further effect: Communication on questions of research ethics and development of standards	

QualidataNet – Network for qualitative data
