DANS

Dutch national centre of expertise & repository for research data

Offers **data publishing and archiving services** for individual researchers and institutes

Offers **advice** and **training** on Research Data Management (**RDM**), **FAIR data** and **Open Science**

DANS Services

DANS Data Stations

- *Domain-specific* repository
- For researchers
- DANS manages technical infrastructure
- *DANS* manages data curation
- Long term storage in our Vault
- CoreTrustSeal *certified*

DataverseNL

- *Institutional* repository
- For researchers (of affiliated institutes)
- DANS manages technical infrastructure
- *Institutes* manage data curation
- Long term storage in our Vault
- CoreTrustSeal *possible*

Support Open Science & FAIR Data

Findable

- Search catalogues | Standardized metadata & vocabularies| Assign DOIs to data

Accessible

- Repository | Clear access conditions & licences | Metadata always open

Interoperable

- (Meta)data in different formats | Open formats | Standards for machine-readability

Reusable

- Data curators | Domain-standards for data descriptions | Reuse metrics

As open as possible as closed as necessary

Following the Open Science principles you want to publish **Open Access** where possible

As open as possible as closed as necessary

When might open not be possible?

Images CC-BY-SA https://dmeg.cessda.eu/

As open as possible as closed as necessary

When might fully open not be possible?

- Personal data
- Sensitive information

- Sensitive information

Qualitative data

Images CC-BY-SA https://dmeg.cessda.eu/

The challenges of qualitative data

Qualitative data *refers to information that is not gathered in numerical form, but rather describes qualities or characteristics.*

Image CC-BY-SA https://dmeg.cessda.eu/

The challenges of qualitative data

- Often contains personal data
- Hard to de-identify
  - You lose contextual information
  - Qualitative aspects are what you want to study
- Can contain sensitive information

Image CC-BY-SA https://dmeg.cessda.eu/

The challenges of qualitative data

- Often contains personal data
- Hard to de-identify
  - You lose contextual information
  - Qualitative aspects are what you want to study
- Can contain sensitive information

We will discuss the options you have to make such data reusable

Planning your project

Plan your project with reuse in mind

- What data does the study generate?
- Can (parts of) the data be de-identified?
- What do you want to / can you make available afterwards?
  - De-identified data vs. all of the data?
  - Bound to specific re-use purposes?

→ Include data sharing in your **informed consent forms**

Informed consent examples University of Oxford | CESSDA DMEG | Utrecht University (2) | TU Delft

Processing your data

Open Science in the processing of your data

*Your data will become more useful for others when your **methodology** and the **tools** you have used in your project are **open**ly available .*

- Assess which open source tools exist for data collection and data processing (see guide for examples of tools for transcription, annotation and de-identification of data)
- Consider the formats you use and chose open formats (see guidance from DANS)
- Make your analysis pipelines available (e.g. through Github)
- Pre-register your work (more on this later today ;))

Deidentification of data

- Removing or replacing identifiable information from the data
- To increase possibilities of data sharing (openly)
- **Anonymous** - data cannot be re-identified (GDRP does not apply anymore)
- **Pseudonymised** - re-identification of the data remains possible (e.g. through a key)
- Planning for data reuse in your data processing
  - data minimisation
  - creating de-identification pipeline

→ The Guide has examples of tools for de-identification of qualitative data

→ Guidance, tips & tricks: **Data Privacy Handbook Utrecht University** | **CESSDA** | **FSD** |

Archiving and publishing your data

Selecting a repository

- Archive data so it is securely stored for the long term
- Publish (meta)data so the dataset can be found and reused

Selecting a repository

- Archive data so it is securely stored for the long term
- Publish (meta)data so the dataset can be found and reused

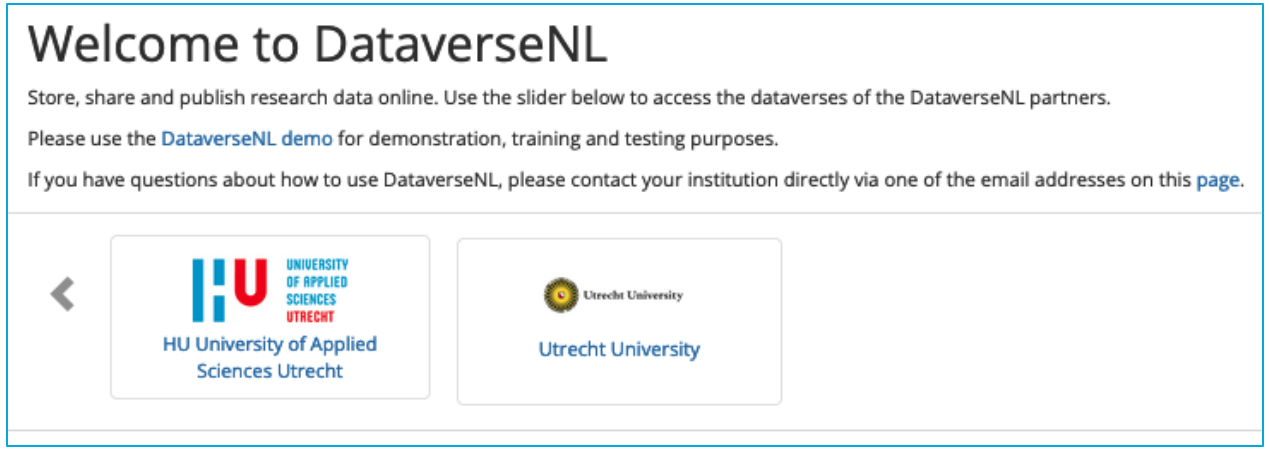
→ Selecting a Trustworthy Digital Repository

Selecting a repository

- Archive data so it is securely stored for the long term
- Publish (meta)data so the dataset can be found and reused

→ Selecting a Trustworthy Digital Repository

- Your institute may have regulations or recommendations



Preparing your dataset

- Prepare your dataset according to the repository guidelines
  - Metadata and Documentation
  - Preferred file formats

- Available guidance (for qualitative data)
  - CESSDA - Data Management Expert Guide - Documentation and Metadata
  - DANS - Deposit manual
  - DANS - Preferred file formats
  - FSD - Processing qualitative data files

→ **Decide** whether your data can be published **open** or under **restricted access**

Decision Tree

Description

A New Technology-Based Firm (NTBF) is a significant enabler of job creation and a driver of the economy through stimulating innovation. In the last two decades, we have seen an enormous development of the NTBFs. Science and technology policymakers tend to endorse the formation of NTBFs via providing proper conditions for them to generate more economic growth within their territory. However, the liability of smallness, newness, and weak networking ties are three important obstacles in the early stages of an NTBF's lifecycle. They are a threat to the development process of any NTBFs. Consequently, there is a high rate of failure among NTBFs.

A remedy to avoid these failures is in using the support and resources by Business Incubators (BIs). BIs provide supportive services (e.g., administrative and finance-related support, and networking) to promote the NTBFs capabilities and to help them address their liabilities.

So far, there is almost no reliable evidence on the effectiveness of BIs on the performance of NTBFs. Therefore, in this thesis, we aim (1) to identify the supportive activities by BIs and, (2) to understand to what extent the supports by them have a serious impact on the performance of their NTBFs. Building on qualitative and quantitative research methods, a model to measure the impact of support by BIs on the performances of NTBFs is developed, and tested among Dutch and German NTBFs. The research results provide practical guidelines for the management teams of the incubators, which can increase the effectiveness of their performances.

Description	Interview met de oprichter en galeriehouder van Galerie Louise Smit in Amsterdam (1986–2011), speciaal voor hedendaagse sieraadontwerpers en gericht op unicaten. Het opzetten van de galerie aan de Prinsengracht in Amsterdam wordt besproken, inclusief het ontwerp ervan door Herman Postma en Menno Dieperink; het verzamelen van sieraden, inclusief groeiende aandacht van musea en verzamelaars, waaronder Rom en Ida Boelen. De ontwikkeling van sieraad galeries in Nederland wordt belicht, en hoe persaandacht heeft geholpen bij het succes van de galerie. Het interview geeft een goed beeld van de ontwikkeling naar erkenning van het sieraad als kunstwerk en de galeriewereld in Amsterdam midden jaren 1980 tot 2010. (2024-08-29)
