# Data management policy

ADA AUSTRALIAN DATA ARCHIVE

- Strong program of guidance and support since 2007
  - Australian National Data Service
- Limited interest in mandating data deposit
  - ARC Funding Agreement 2015 Section C6:
  - “Social science data sets: Any digital data arising from a Project involving research relating to the social sciences should be lodged with the Australian Social Science Data Archive (ASSDA) for secondary use by other investigators. This should normally be done within two years of the conclusion of any fieldwork relating to the Project research. If a CI is not intending to do so within the two-year period, he/she should include the reasons in the Project’s Final Report.”

# But times they are a changin’

- Funders:
  - Australian Research Council have just this year introduced a “Data Management” section into applications
  - Some small funders mandate deposit as a condition of receiving final payment
- Journals:
  - Requiring data availability to validate research

# Researcher shift

- From “Why would I deposit?”
- To “How quickly can you process my deposit?”

- This appears to be more journal driven than funder driven

# Archive impact

- Faster, faster, faster …
- Expectations are shifting for quicker turnaround of deposits
  - But not necessarily availability of data
- May need to see some revision of:
  - Policy: What level of curation can we provide?
  - Practice: How do we manage the timeliness of our activities? (Automation??)
- Problem of time vs. quality
  - What is the quality of data and metadata disseminated under such a model?

# Implementing DOIs

- ANDS “Cite My Data”
  - AU DataCite member
  - See “Cite My Data”
    - http://www.ands.org.au/services/cite-my-data.html
- ADA workflows
  - Have now mapped to our process
  - When to mint ID?
- Metadata needs
  - DOI and DDI
  - Nesstar – can’t yet add?
