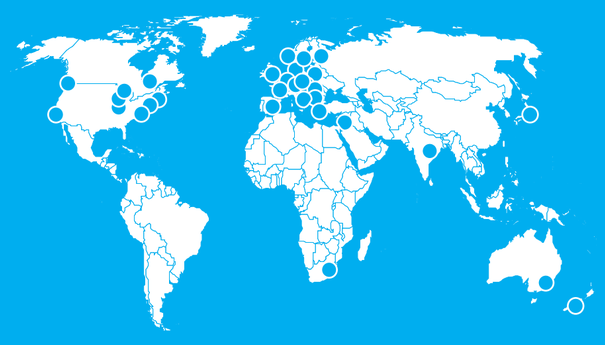
IFDO

International Federation of Data Organizations



open access

IFDO aims to promote and work for open access to digital data

facilitating research

IFDO members are research infrastructures specially designed to support scientific endeavour and investment

supporting data organisations

IFDO aims to promote and support the establishment and development of data organizations

preservation/ dissemination

IFDO will support the development of best practise procedures for preserving and disseminating social science data

international cooperation

As more and more research topics need broad international focus, there is a growing need to stimulate international cooperation

Strengthening IFDO

IFDO is currently developing its strategy and role. Its main domains are social sciences and humanities. There are an increasing number of countries with data organisations working on the SSH area. This calls for more international cooperation and coordination.

New Data Archive?

IFDO is one of the organisations providing support for emerging national data services. IFDO membership helps to follow-up world-wide development of SSH data organisations and their activities.

standards and tools

IFDO will support the development of standards, procedures and tools enhancing data usage

sharing data and policies

Efficient data sharing calls for international research environment shaped by appropriate data policies

stimulating wider use

IFDO aims to encourage and facilitate wider and informed use of existing data collections

facilitate **worldwide coordination** of data services
