ENHANCING KNOWLEDGE
THROUGH DATA SHARING

Collect, archive, publish, reuse. But what about the users?

IASSIST, Session G2: Data literacy, 10 June 2022

Content

- **Data archive and its purpose**
- **CSDA case study**
  - **User survey 2020**
  - **User survey 2022**
- **Lessons learned**
- **Next steps**

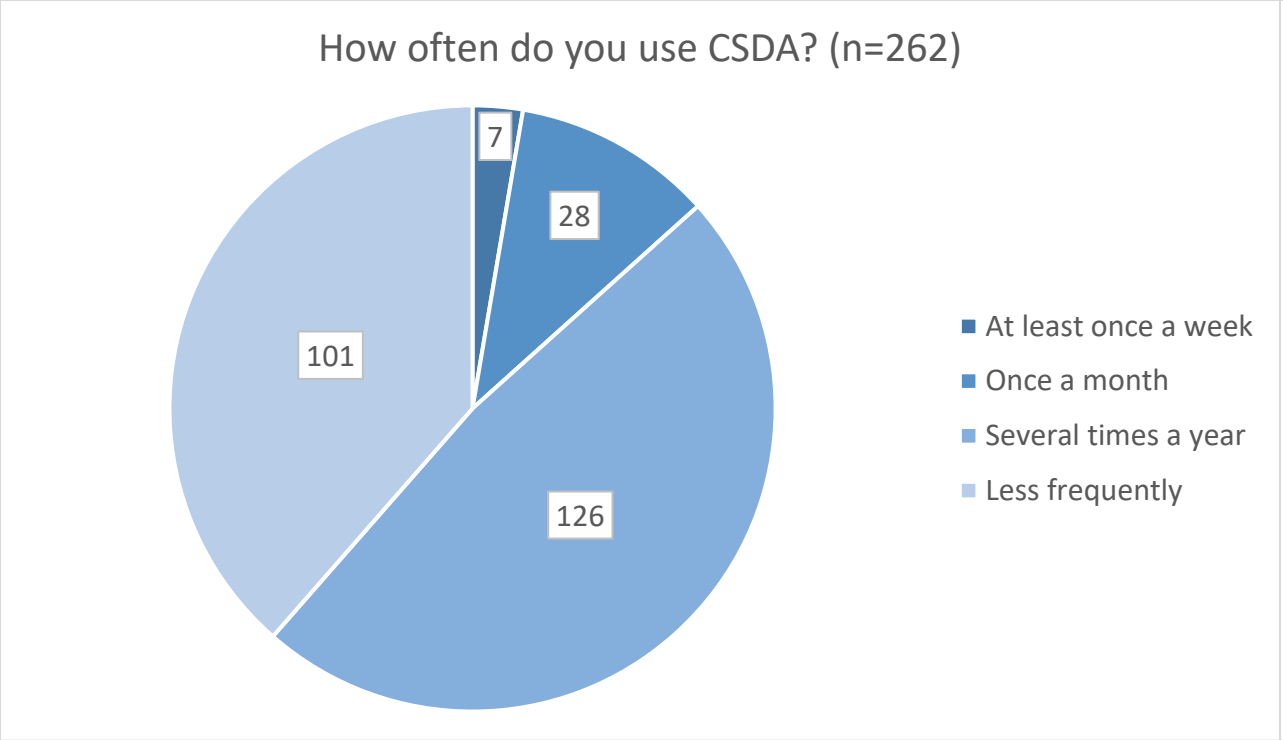
Data archive and its purpose

- Facility that collects, stores and makes data accessible
- Job description and services:
  - partnership and collaborations with other archives and institutions
  - cooperation in international social surveys
  - promoting secondary data analysis
  - **communication and systematic education in the data literacy field**

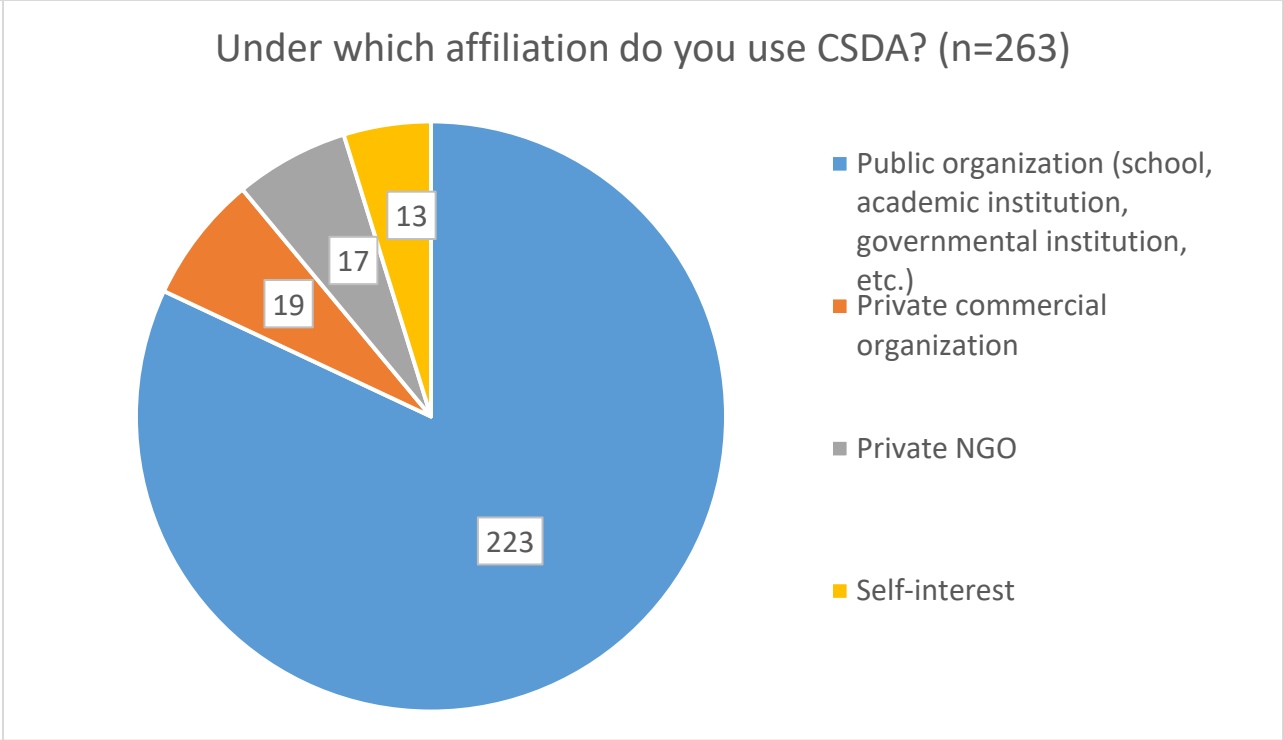
CSDA Case Study

User survey 2020

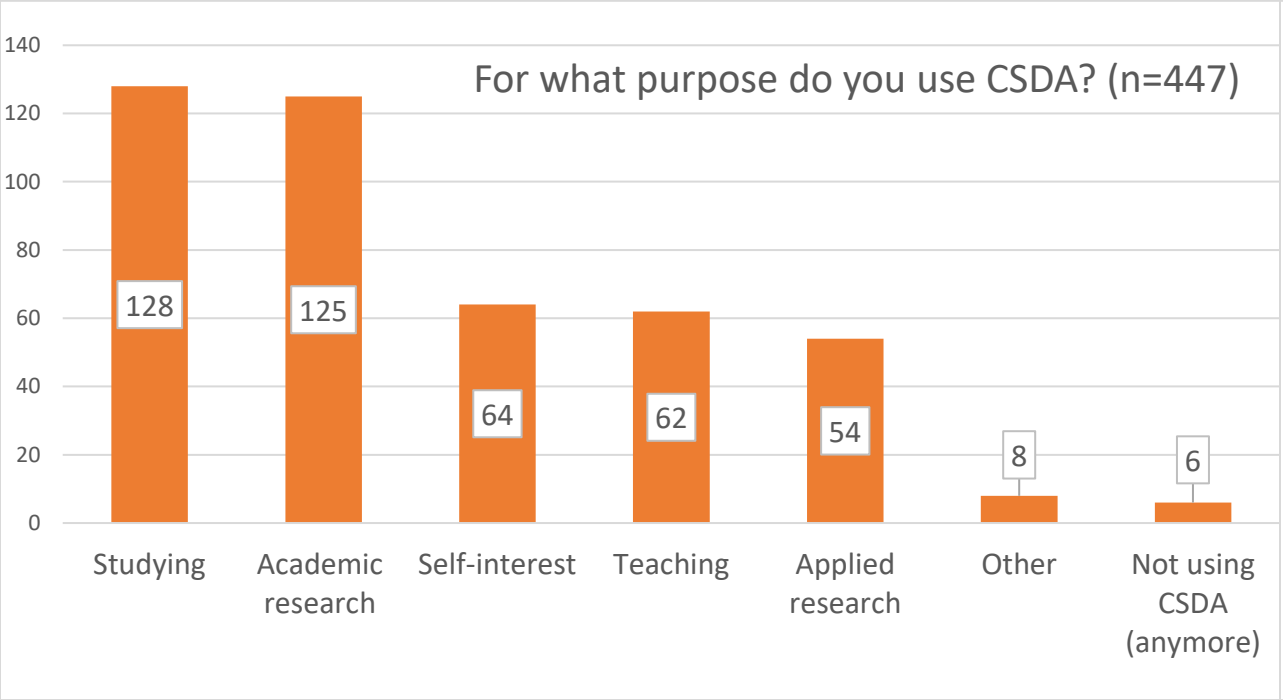
- Online survey questionnaire in the Czech language
- Data collection: 6.1.-10.2.2020
- n = 263
- **Focus:**
  - frequency of use of our data archive, user affiliations and types of activities they perform using the archive, Nesstar functions they use, citation practices, other data archives they use, reproaches/praises towards the archive
- **Output**
  - data publicly available at CSDA along with the report (in Czech)
  - academic article in IASSIST Quarterly: Sustainability through the liaison with data archive users



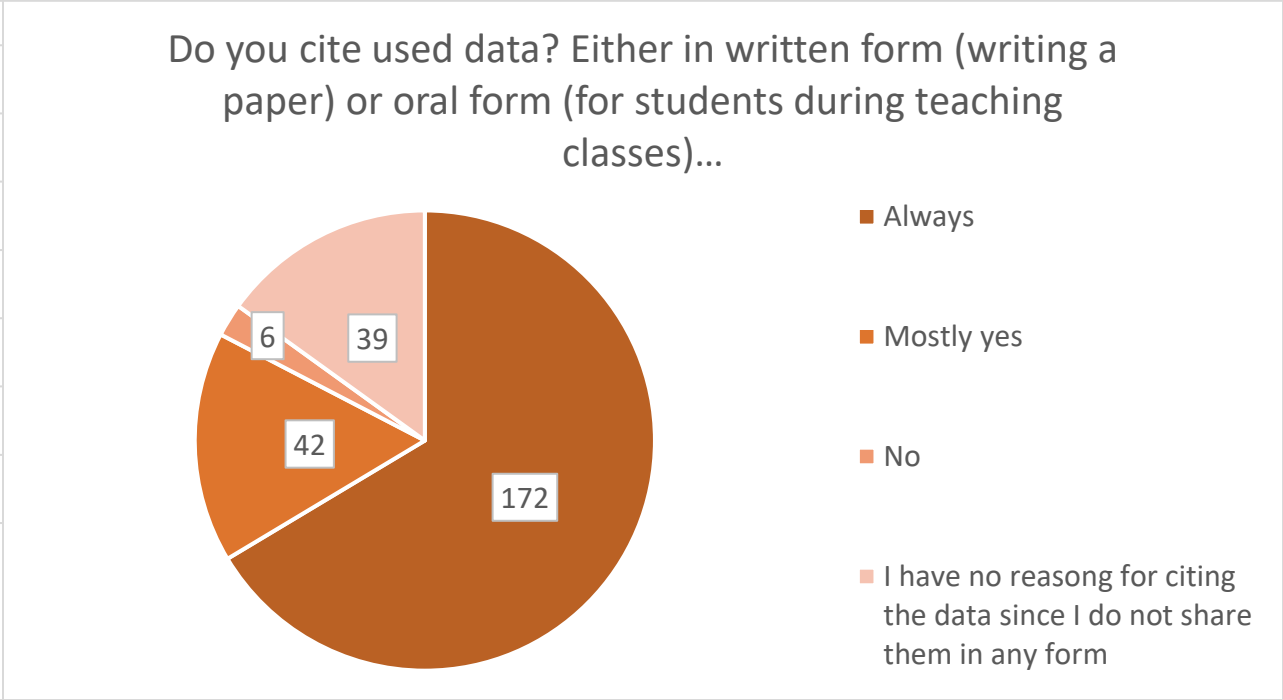
How often do you use CSDA? (n=262)
7
28
126
101
At least once a week
Once a month
Several times a year
Less frequently



Under which affiliation do you use CSDA? (n=263)
223
19
17
13
Public organization (school, academic institution, governmental institution, etc.)
Private commercial organization
Private NGO
Self-interest



For what purpose do you use CSDA? (n=447)
140
120
100
80
60
40
20
0
128
125
64
62
54
8
6
Studying
Academic research
Self-interest
Teaching
Applied research
Other
Not using CSDA (anymore)



Do you cite used data? Either in written form (writing a paper) or oral form (for students during teaching classes)...
172
42
6
39
Always
Mostly yes
No
I have no reasong for citing the data since I do not share them in any form

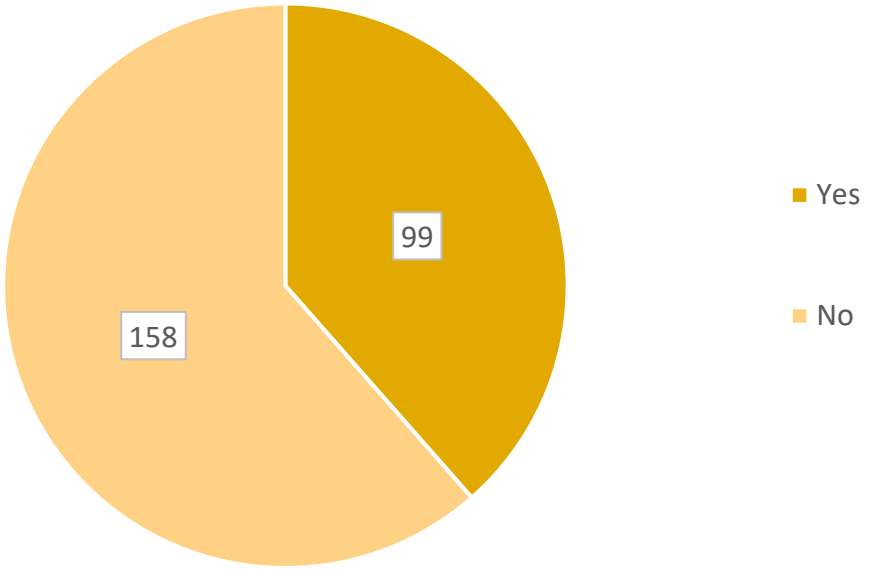
User survey 2020: results

- CSDA users are generally satisfied
- Users are mostly students who need to be properly trained in data management
- Data citation practice is lacking
  - both students and academics realize they should cite the data
  - in reality, they do not do it = the need to simplify data citation

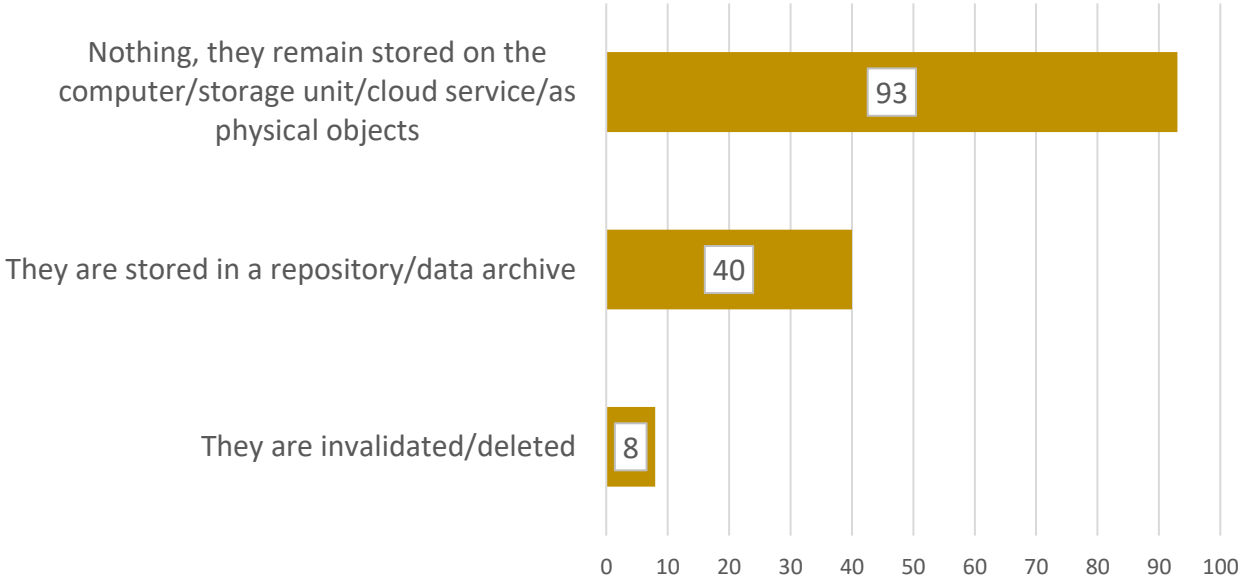
User survey 2022

- Online survey questionnaire in Czech and English language
- Data collection: 8.2. - 31.3.2022
- n = 281
- **Focus**
  - frequency of use of our data archive, user affiliations and types of activities they perform through the use of the archive, other data archives they use, reproaches/praises towards the archive
  - **Open Science and FAIR data familiarity**
  - **producing data and its fate**
- **Output**
  - work in progress

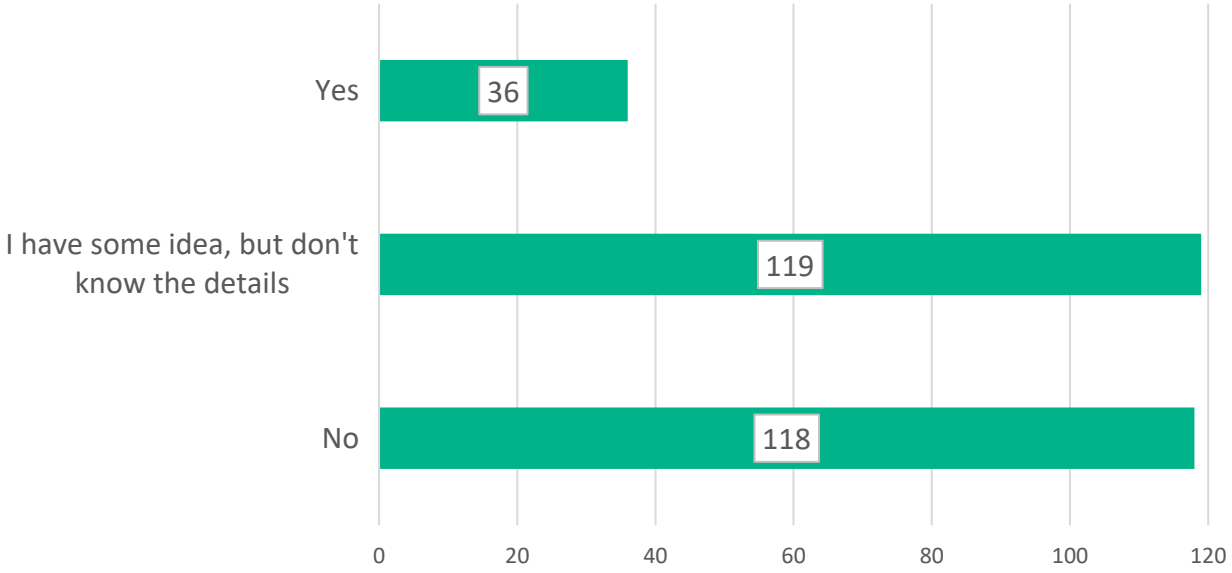
Besides CSDA, do you use other data archives to view / download data? (n=257)



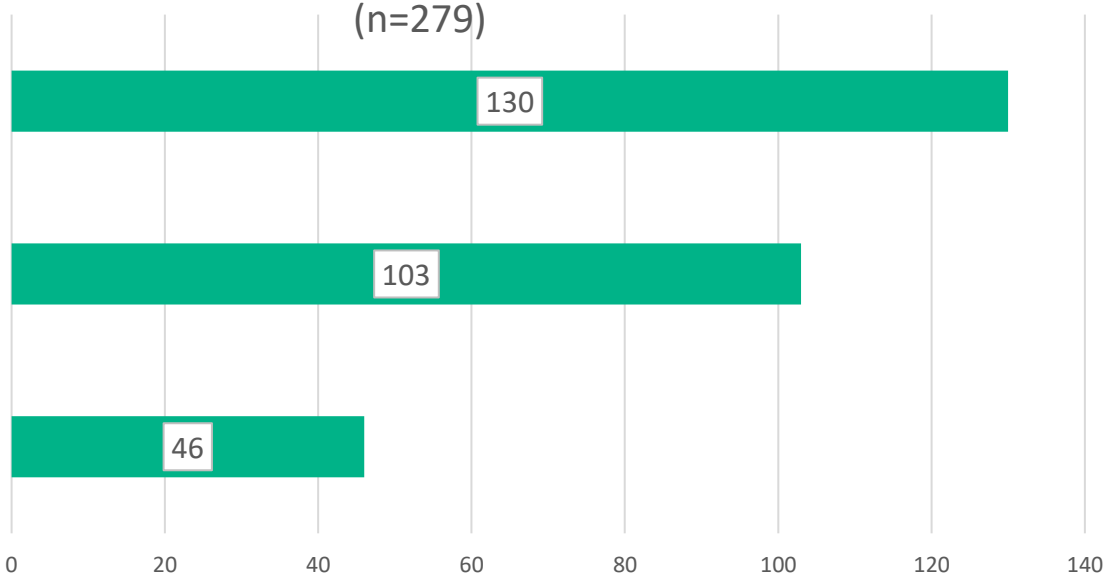
What usually happens to this data after the end of the project/research phase/research task? (n=141)



Does the FAIR data mean anything to you? (n=273)



Does the Open Science mean anything to you? (n=279)



User survey 2022: results

- CSDA is the main source of data for users, but they also use other archives
- We also aim to educate the users
  - attract them to the web, not just download the data and leave
- Our users know the term Open Science (the name is eloquent), but FAIR data is not familiar to them
- Users are willing to store their data at the data archive, but it is necessary to properly inform them about our services and assure them that storing data in CSDA is not difficult (neither in time nor otherwise)

Lessons learned

- **Do you know what the users of your archive want? Who are your users?**
- **As a user, do you feel you're being heard?**
  - We set communication channels with our users
  - Users are interested in taking part in developing a data catalogue, services
- **User-centred design methods help us to work with users**
  - Many benefits: helps to specify the course of the data archive, better targeting specific needs of the users
  - Design of the services

Next steps

- Create a plan of educational activities in connection with the results of the questionnaire and the requirements of Open Science
  - Further strengthen these activities in CSDA
  - Newly, we cooperate with a person with pedagogical background
- Simplify the path to data storage and make it more attractive for users
- Verify the proposed solutions with our users
