Wednesday, 8 June
13:30-15:00 Session B1

Building JDCat

Japan Data Catalog for the Humanities and Social Sciences

Yukio MAEDA, Japan Society for the Promotion of Science / University of Tokyo, ymaeda@iss.u-tokyo.ac.jp (corresponding author)
Makoto ASAOKA, National Institute of Informatics, asaoka@nii.ac.jp
Masaharu HAYASHI, National Institute of Informatics, mhaya@nii.ac.jp

Overview

1. Background
2. What is JDCat?
3. Variety of data and data centers
4. Metadata scheme
5. Future plan

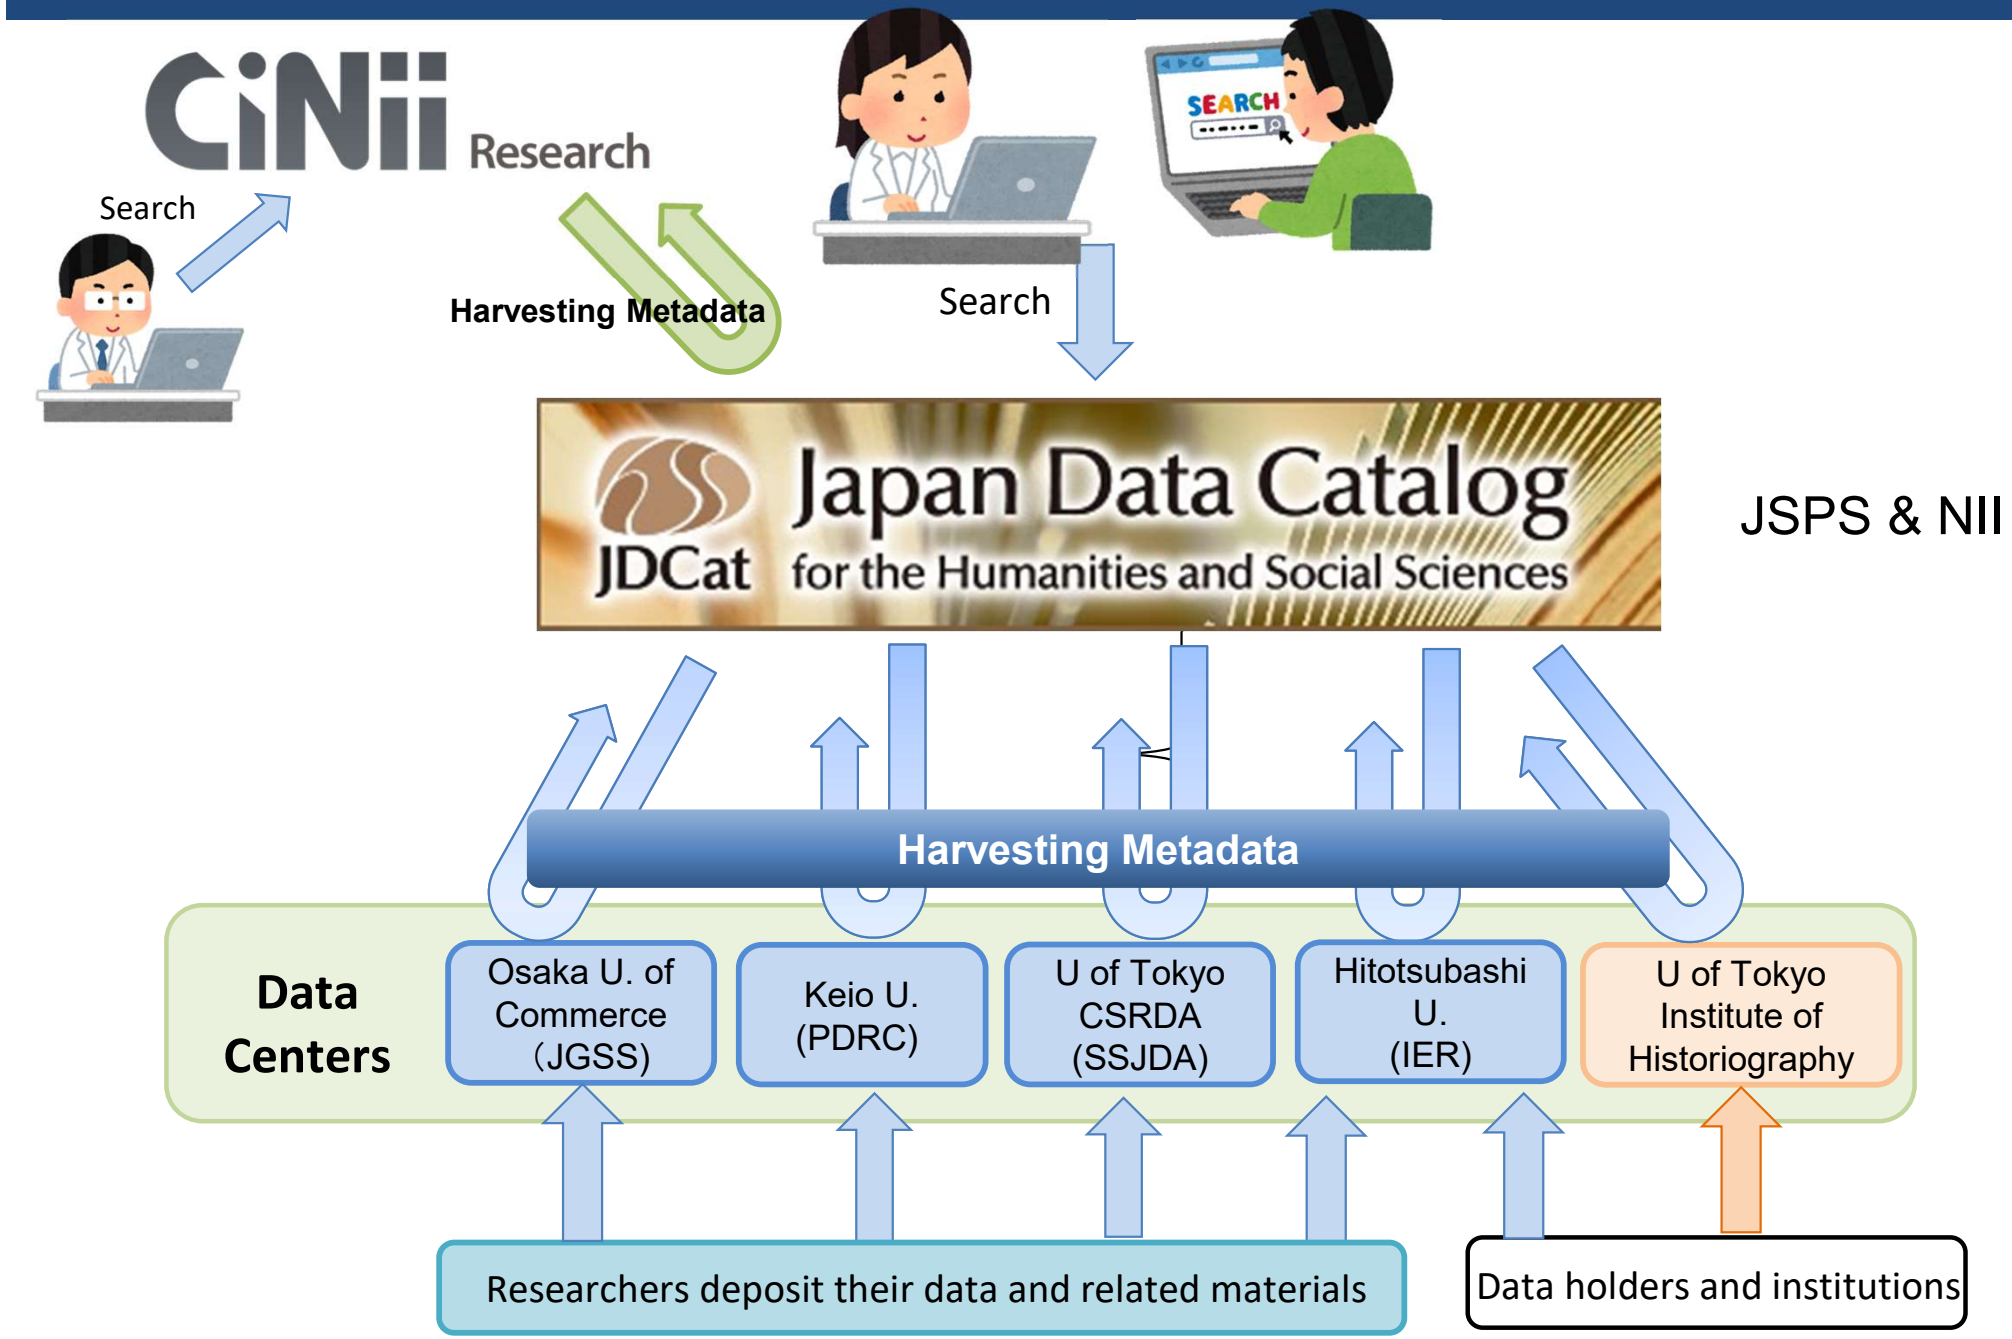
1. Background

- JSPS provides the funding for Data Infrastructure for the Humanities and Social Sciences (2018-2022).
  - To promote preservation and dissemination of research data in the humanities and social sciences.

- JPY 200,000,000 ≈ EUR 1,480,000 per year
  - Divided by 6 institutions

- National Institute of Informatics (NII) provides technical expertise for JSPS and the data centers.

2. What is JDCat?



* JDCat is based on the repository software WEKO3, which is developed by National Institute of Informatics (NII).

Before and after JDCat

Before	After
Several points of entries were scattered across institutions.	A single point of entry for those seeking research data in social sciences
No interoperability across institutions. Standard metadata scheme was non-existent.	Interoperability across institutions. A metadata scheme is specified.
Metadata were available in Japanese; insufficient metadata in English.	Metadata are available both in Japanese and English

Main Characteristics of JDCat

- Developed as an open source program using WEKO3
- Harvesting metadata from the five data centers
  - OAI-PMH (4) / ResourceSync (1)
- Metadata in JDCat are published under CC0
- Metadata are also harvested to a larger academic discovery service (CiNii Research)
- DOIs are assigned to registered datasets by the respective data centers

WEKO3

- WEKO3 is an open source repository platform designed for JAIRO Cloud.
  - JAIRO Cloud provides institutional repository services in Japan.
  - WEKO3 is based on Invenio v3 (Zenodo is also developed using Invenio v3 framework).

- WEKO3 allows users
  - to customize the submission and dissemination workflows
  - to manage metadata flexibly to serve specific needs and standards
  - to harvest and/or provide metadata through OAI-PMH and ResourceSync

	Access	restricted access 制約付きアクセス
	License	This data is only accessible to approved users.
	License	利用申請と承認が必要
	Summary	Survey on Lifestyle 2013 targets 3,000 individuals aged 20 to 80. The objectives were 1) to understand the degree to which Japanese people are aware of and the way they handle the risks associated with climate change and radioactive contamination caused by the Great East Japan Earthquake; as well as 2) to produce information for future environmental policy development.

By clicking the link, one will be transferred to the web site maintained by each data center.

3. Variety of data and data centers

Data Center	Storage and metadata editor (metadata harvesting)	Types of data	N
JGSS Research Center, Osaka University of Commerce	Storage: JAIRO Cloud Metadata: WEKO3 (OAI-PMH)	Japanese General Social Survey data, social survey data	53
Panel Data Research Center, Keio University	Storage: Independent Metadata: WEKO3 (OAI-PMH)	Panel survey data in household economics	62
Center for Social Research and Data Archives (SSJDA), University of Tokyo	Storage: Independent Metadata: Independent (OAI-PMH)	Survey data in social science in general	227
Institute of Economic Research, Hitotsubashi University	Storage: JAIRO Cloud Metadata: WEKO3 (OAI-PMH)	Tabular data from official statistics, questionnaires from government surveys	6041
Historiographical Institute, University of Tokyo	Storage: Independent Metadata: Independent (Resource Sync)	Digital images of historical documents	774

4. Metadata scheme

- Metadata scheme is based on DDI Codebook
  - To set this metadata scheme, we consulted several catalogs of large data archives
- Mapped onto the JPCOAR* metadata scheme for crosswalk

*Japan Consortium for Open Access Repository

5. Future plan

- Need to make more datasets available through the JDCat and the data centers

- 2022 is the final year of the current funding period.
  - Continued funding is indispensable to keep qualified professionals

- In the next phase,
  - Who will manage the JDCat and its metadata scheme will be decided through an open bidding process.
  - Data centers will be chosen again through a competitive bid.
